ANNIVERSARY NUMBER
1874 1910

L. A. Stahmer

Pine Top Poultry Farm

Breeders and Exhibitors of Barred Plymouth Rocks and Single Comb White Leghorns

We have a number of very fine exhibition and utility males and females of both varieties for sale. We are making a specialty of mating up breeding pens for purchasers and I can furnish the same in any quantity. Our 1910 pens are now mated up and are the finest we have ever had. For full information send for our beautifully illustrated catalogue, showing our 1910 matings. Eggs for hatching. Day-old chicks. Stock for sale.

J. H. HALLOCK, Proprietor :: Box 2, HARTWOOD, SULLIVAN CO., N. Y.

**SILVER-LACED
WYANDOTTES**

We entered but one cock at the Chicago show. He won first. We also won third cockerel and fourth pullet. Exhibition cockerels and pullets, good ones, \$3.00 to \$15.00. A few excellent breeding pullets and cockerels at \$2.00 and \$3.00.

Clare E. Hoffman : : Allegan, Michigan

Buff Wyandottes

AT THE GREAT WEST MICHIGAN STATE FAIR—Won in the hottest competition first and third cock, third hen, first and third pullet and second and third cockerel. Silver cup three years in succession for best pen at Grand Rapids. 200 head grand youngsters, 50 yearling hens and 5 cock birds for sale. If you want the soft mellow Buff kind (buff to the skin) get my rock bottom prices.

E. A. Knapp, 451 Grandville Avenue, Grand Rapids, Mich.

REDS

"There are among your flock 2 females which if mated to these males (today in my yards) would produce Reds the equal of which the world has never seen."—Judge Thos. F. Rigg. Winners at Chicago, Cincinnati, Indianapolis, Toledo, Detroit, Milwaukee. 3,000 R. I. Reds for sale. Both combs.

EDWIN R. GORNISH - - EDWARDSBURG, MICHIGAN

SHEPPARD'S FAMOUS ANCONAS

**THE
WORLD'S
BEST**

Rose and Single Comb. Champions at the world's greatest shows. Have been winning more 1st and 2d prizes than all Ancona breeders together, in the Imperial Show of the Nation—Madison Square, N. Y. Have also won 1st at Dairy Show, London, Eng., and Cleveland. In 1907 won all the 1st and 2d prizes at the great Madison Square Show, in the largest Ancona class in the history of the big show. Have the greatest egg record, having laid 78 eggs in 82 consecutive days. A handsome lot of exhibition and utility birds for sale. If you wish to improve your stock or want to win at your show, write for free circ. Egg orders booked now.

H. Cecil Sheppard : IMPORTER EXPORTER BREEDER : Box M, Berea, Ohio
President International Ancona Club

Foster's "Duke of Kent" Black Orpingtons

For the best S. C. Black Orpingtons you must send to the oldest and best breeder of this variety in America. The "Duke of Kent" and six of the best hens that money could buy were the foundation of this famous strain. Five hundred young premium birds for sale and highest class eggs at \$4.00 per 13; \$7.00 for 26. Send a one-cent stamp for the history of the Black Orpingtons and a 9x12 chromo of this famous bird and three of his sons.

D. N. FOSTER : VICE-PRES. AMERICAN ORP. CLUB : R. 7, FT. WAYNE, INDIANA

Stock and Eggs Always For Sale
A. E. MUTH : Box 129, Route 15 : WEST ALLIS, WISC.

**MISHLER'S
ROSE COMB BLACK
MINORCAS**

**MADE A CLEAN SWEEP OF ALL
FIRST PRIZES AT CHICAGO, 1909**

2d, 4th and 5th cocks, 3d and 5th hens, 2d and 3d ecls., 4th pullet and 2d and 3d pens. This in a class of 69 birds and in competition with nine other breeders, places the **Mishler strain at the top.** In writing for show or breeding stock let us know about what number you want and the amount you are expecting to invest. Fifteen pens will be mated for the egg trade. Why not get a start with the kind that **win, weigh, lay and pay?** Please mention American Poultry Journal when writing.

LLOYD C. MISHLER R. R. 1 NORTH MANCHESTER, IND.

ORPINGTONS

Our 1st prize pen at Cincinnati show was the greatest sensation in Orpington history. All judges agreed they had seen nothing equal to it. Hens weighing 12 lbs., of magnificent, even, soft Buff; clear wings and tails. Note the photograph of our Buff hen, Buff Enchantress. A winner at Crystal Palace. This photograph is not retouched! We are not afraid to say "Ask the Judge." Judges Pierce and Loring Brown judged at Cincinnati—ask them; also Judge Ewald. No expert ever saw our Buffs who did not declare them the most wonderful in the world, in size, type and color. Our Cincinnati 1st prize pen was headed by a ckl. we raised ourselves. A bird of great size, wonderful type and sensational color; perfect wing and tail, eye, comb and under-color. We will return these birds to breeding yard at once, as we are hatching these eggs all the year. We are now booking orders for January and February eggs. If you want sensational type and size, don't delay. Bargain sale of utility pens at \$15 up, in Blacks and Buffs. We claim that our Buffs and Whites are equal to our wonderful Blacks. Free catalogue.

CHEVIOT POULTRY FARMS - CINCINNATI, OHIO

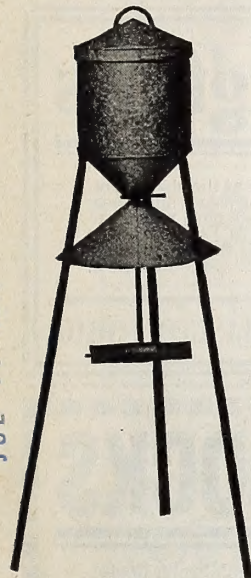

ORPINGTONS

J. M. WILLIAMS & CO., Box B, North Adams, Mich.

World's Foremost
White Wyandottes

have won for me the highest honors at the leading shows of America. I have sold more prominent winners for the best shows in America than any other breeder from Atlantic to the Pacific, Canada to Texas, past winter more than ever; every bird I sold for winner proved a winner. All stock returned at my expense if not satisfactory. Write me.

J. H. Jackson :- Lock Box 88 :- Hudson, Massachusetts

Do you want to prevent stomach and bowel troubles in your yards? Then use

The Norwich Automatic Exerciser and Feeder

Feed delivered is always fresh and clean. Necessitates slow feeding and makes the flock work for its living. You will never see your hens roosting on dust boxes or roost all drawn up, if you use the Norwich Automatic Exerciser and Feeder; they will all be on their feet hustling, and the exercise makes them lay. Every one gets its share of feed, the weaker as well as the stronger, and the use of the machine will positively bring up the vitality of the flock.

Guaranteed absolutely rat and bird proof, and to save 20 per cent on feed bills, or money and expenses refunded.

It will cost you nothing to prove our claims. Write us—it will pay you.

Norwich Automatic Feeder Company
20 Water Street Norwich, Conn.

115835
1908-1909 Madison Square Garden Winner. On Buffs we won first and third cockerels, second and third pullets, fourth hen, fifth cock, silver cup for best cockerel, silver cup for best collection. Showed nine birds winning silver cup with 7 points more than any other breeder. On Whites at Cleveland 1908, first cock, first cockerel, first hen, first pullet. S. C. Blacks all sold.

CIRCULAR FREE

Buff Leghorns

: ONE HUNDRED COCKERELS :

At \$2.00, \$3.00 and \$5.00 each. Show birds at \$10.00 up. Trios at \$8.00 and \$10.00. Pens at \$12.00 and \$15.00. Winners at New York, Trenton, Easton and Dover. Our Buffs are the genuine Single Comb Buff.

Jas. Kugler Jr., Maple Hill Farm, R. 1, Frenchtown, N. J.

R. C. R. I. RED CHICKENS

Book Egg Orders Now

No more birds at any price. Eggs \$2 per 13, from birds scoring 94½ to 96½. If you want Bantam eggs, write. Albin J. Thuneman, 751 Kentner St., Defiance, O.

THE FAMOUS HEN "PEGGY"
Value \$10,000.00

First prize winner at Jamestown Exposition, Madison Square Garden, New York, and everywhere she has been shown. The reason we value the above hen at Ten Thousand Dollars is because we refused \$2,500 for her after we sold five of her chicks for \$7,500; and we will give \$10,000 for a "Crystal" White Orpington hen that will equal her in every way.—Kellerstrass Farm, Kansas City, Mo.

KELLERSTRASS WHITE ORPINGTONS

Are the biggest payers because they have proven to be the biggest winter layers

KELLERSTRASS STRAIN

CRYSTAL White Orpingtons are the grandest utility birds on record today, and as to their fancy quality they won first at Madison Square Garden, N. Y., 1905, 1906, 1907, 1908; also at Crystal Palace, London, England, Chicago, and Boston. If you need some birds to improve your stock or for the show room, write us, we have them, and the kind that win, as our past record shows. Stock and eggs for sale at all times. Remember, we are the originators of Crystal White Orpingtons, and breed only the one kind. We devote our whole time to this one breed. Send for catalog; mention A. P. J.

Kellerstrass Farm, R. F. D. No. 1, Box 98, Kansas City, Mo.
Originators of Crystal White Orpingtons, E. Kellerstrass, Prop., Life Member Am. W. Orpington Club and A. P. A.

JUL 17 1911

Almendinger's R. C. Buff Leghorns
won five firsts and two seconds on seven entries at the New York State Fair, 1909. Show birds fit to win in any competition. Catalogue.

A. F. Almendinger, Box N, Buffalo, New York

ROSE COMB BROWN LEGHORN

Specialist—Some extra nice cocks and cockerels for sale.

H. C. Franklin, Townshend, Vt.

Shaylor's Barred Rocks

For years among the winners at Boston, New York and other leading shows. They are of the correct type and color. If in want of either breeding or exhibition birds, write for description and prices. Satisfaction assured. Please mention this paper.

C. H. Shaylor : : : Lee, Massachusetts

S. C. Buff Orpingtons

MADISON SQUARE GARDEN WINNERS—We won first prize pen at the above show, 1908 and 1909, with fifteen pens competing. This pen was conceded by judges and breeders to be the best pen of Orpingtons ever shown at the Garden, and we have refused to sell eggs for the past five years, although we have been offered \$20.00 per setting for them. But we will sell you birds bred from this pen and others there equal that can win for you in the best of company, and we will ship them C. O. D. Nuff Said.

Z. D. STRUBLE Specialist and Licensed Club Judge **Lock Box 16, BASCOM, OHIO**

BARRED ROCKS

Winners at Illinois State Fair, Rockford, Dixon, Bradford and Walnut. Finely barred, large, heavy boned, low-tailed cockerels that will please you, for sale cheap. Also a few hens and pullets and two yearling male birds. Pekin ducks that will win in any show. If you wish size and quality, write

Diseases of Poultry

BY

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance. With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

American Poultry Journal Pub. Co.
358 DEARBORN STREET -- CHICAGO, ILLINOIS

\$5,000 FOR A NAME.

The Chicago House Wrecking Co. was organized in 1893 for the purpose of dismantling the World's Fair of Chicago, since which time we have purchased and dismantled all the leading Expositions.

At the present time our business consists in the purchase outright from Sheriffs, Receivers and Manufacturers' Sales of immense stocks of general merchandise and supplies including practically every known manufactured article.

We have spent millions of dollars acquainting the public with our wonderful mercantile institution and with the vast quantities of new merchandise and supplies we have for sale. Our greatest difficulty has been to impress the fact that our goods are not second-hand; neither are they wrecked material, nor anything but first class, high grade goods, just the same as you would purchase in any mercantile house in the land. Our name misleads the public into the belief that the goods we offer for sale are not brand new.

For these reasons we have concluded that if we could discover a name broad enough and general enough to correct these false impressions, we would willingly pay the sum of \$5,000. Can you suggest the right name? Address your reply

Birds ready for the show room. Yearling breeders, cockerels and pullets. 200 egg strain. Eggs, \$1, \$2, \$5 per sitting; \$6, \$10, \$20 per 100. Catalogue free. Stamp for Red Standard.

THREE FIRSTS AT CINCINNATI IN THE STRONGEST CLASS OF WHITE ROCKS

ever caged at this big show. An additional proof of the quality of our strain. Our 1st prize cockerel was the sensation of the show, and was pronounced by Judge Pierce to be a rarely typical male. He will head our pen No. 1 for 1910 breeding season. We will book a limited number of sittings from this pen.

If you want birds that are naturally white, with long backs, well-spread and low-carried tails, send us your order for eggs.

The fact that we also won 1st pullet and 1st hen shows that we have equal quality in both sexes. These birds are all in our 1910 pens, as well as the breeding stock that produced them. Our egg customers this season are bound to get top-notch quality.

Send for free mating list.

Days' Trial—75% Better Hatches
Guaranteed**

BEST "Old Trustys" ever—for 1909-10—built on same trusted-and-tried-experience principles. Now ready for you—with no extra charges for improvements. "Old Trusty" practically runs itself—everybody says. Beginners and old-experienced Poultry Raisers stick by "Old Trusty"—still made of my original, carefully seasoned **California Redwood**—now handsome **metal-encased—pure asbestos lining**—strong, metal, steady legs, too. All sent to you, freight prepaid, anywhere (east of the Rockies) quick, complete, ready for you to get 3 or 4 hatches, on my 40, 60 or 90 days' free-trial plan, from Johnson's own factory at Clay Center, Neb.

**Where Old Trusty Incubators are Made—Largest Exclusive
Incubator and Brooder Factory in the World**

This Picture is from a Real Photograph—not an "Artist's Dream"—Over 39,000 Sq. Ft. and 400 Workers here.

BOOK READY Come, Send Your Names in Now, Friends—

DON'T miss this Big Book this year. I'm ready to hand it to you now by Uncle Sam's mail—postage paid to you anywhere on earth. Send me your name, friend.

You'll be bound to be interested, whether you got my last year's book or not. Over 200 pages and over 1200 actual photographs; every page a "Poultry Sermon" on chicken raising.

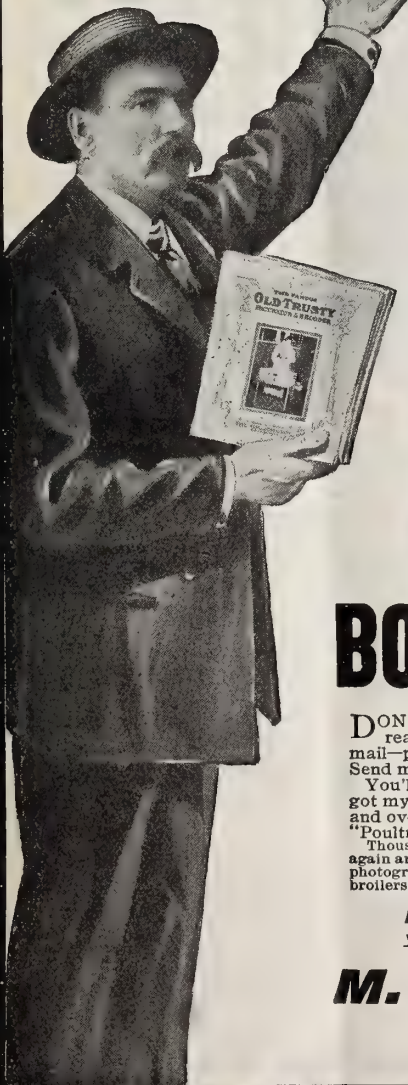

Thousands of users of "Old Trustys" have written me again and sent in helpful advice to chicken raisers and photographs of results of their big hatches and broods of broilers. So, be sure to write me today by postal or letter,

or send your name and address on the coupon above, so you can see just what you can do with an "Old Trusty" if you decide to order one sent to you to test out 3 hatches.

Price: Don't pay two prices. Don't fuss with experiments or new fangled improvements made to charge extra for. Look up the facts about "Old Trusty," which is 'way past the "experimental" stage these last seven years, and you can read why—and all about me and my 150,000 customers and friends, in my Free Poultry Book—before you order. My price is lower to you this year—something below \$10 complete—freight paid to anywhere east of the Rockies, and no worry about it.

Let me write you, personally, and tell you my price to you and send you my Big, New 1910 Poultry Book, FREE. Will You? Write me—

**M. M. JOHNSON (Incubator Man)
CLAY CENTER, NEBRASKA**

FREE! ORIGIN AND HISTORY of ALL BREEDS OF POULTRY

THE greatest book on poultry ever published, contains sixty-five pages of reading matter, size 9x12 inches, also contains illustrations of 198 different fowls in their natural colors, painted from life. Regular price \$1.00. It has taken years to complete the drawings for this book. It is something never before attempted by any publication, not even the Standard of Perfection contains pictures of fowls in colors.

This book is being sold for \$1.00 every day, but we want every poultryman to have one, as it is the grandest piece of work ever accomplished in poultry literature and is a living ad for its publishers—American Poultry Journal Publishing Co. To accomplish our object and get a copy of this book into the hands of every poultry fancier, we will give one copy FREE for the first six subscriptions to American Poultry Journal you send us at one-half our regular subscription price.

Send us six subscriptions to American Poultry Journal together with \$1.50 and we will send you, postpaid, a copy of the Origin and History of All Breeds of Poultry.

BUT THIS IS NOT ALL

You can take subscriptions at any price from 25 to 50 cents and keep everything above 25 cents as your commission. For the first six subscriptions you send us you will receive a copy of the Origin and History of All Breeds of Poultry as per offer above and these subscriptions will count on the grand prizes listed below as well as any other subscriptions you send us.

Do not fail to read this list carefully as the prizes are well worth your time and trouble and will many times repay your efforts to secure the subscriptions for us.

LIST OF GRAND PRIZES

First Prize

\$600
WING PIANO

The best piano manufactured by the well-known piano manufacturers, Wing & Son, New York City, N. Y., will be given the agent sending us the largest number of subscriptions before June 10, 1910 : : : : :

Second Prize

\$100
CASH

Will be given the agent sending us the second largest number of subscriptions before June 10, 1910. : : : : :

\$200.00 will be distributed among the eight next highest agents as follows:

3d Prize, \$50	Pen of Fowls, your choice, or Incubator or Brooder, any make you desire
4th Prize, \$35	" " " "
5th Prize, \$30	" " " "

9th Prize, \$15	" " " "
10th Prize, \$15	" " " "

In making your selection of Fowls, Incubators or Brooders, they must be selected from Advertisers in American Poultry Journal

Special Instructions to Agents

1. Renewals count the same as new subscriptions. 2. Cash must accompany all subscriptions; this will avoid any misunderstanding. 3. Keep a duplicate list of all subscribers sent us in case any question arises when the contest closes. 4. In case of a tie the value of the prize will be divided. 5. The subscription contest closes June 10th, 1910. All letters postmarked that day will be counted, thus giving those at a distance an equal chance with those near. 6. A list of the winners will be given in the July issue, 1910. 7. All agents may work where they please; this is fair to all. Send for more coupons or any supplies you need. 8. The coupons are made with receipts at the side to be torn off and given to subscribers. This assures the subscriber that you are our authorized agent. 9. No subscription can be sold for less than 25 cents. 10. You must send at least two subscriptions to entitle you to agents' commission or prizes. 11. All subscriptions must be taken on the merits of the publication. 12. Notice—Sell our book, "Origin and History of All Breeds of Poultry," at \$1.00 and keep 25 cents as your commission, this will count as four subscriptions on the contest. Also, take three years' subscriptions to American Poultry Journal at \$1.00 and keep 25 cents as your commission, this also will count as four subscriptions on the contest. : : : : :

TODAY IS THE TIME TO START if you wish to secure one of our new books FREE. Remember, too, that if you get an early start you have the advantage of always being in the lead, and this is better than to be always trying to catch up with the other fellow.

We will furnish you with a sheet of special bargain coupons which you can use if you desire. These coupons have been successfully used on former contests and whereas you only receive 10 cents as your commission when using same, you will find that you can get many more subscribers. In fact, we have agents who give all of their commission to the subscriber and in this manner get many more subscriptions. Send for as many sample copies as you can use to advantage and they will be sent you free of charge.

American Poultry Journal Pub. Co., 358 Dearborn St., Chicago

NOTICE: SEE OTHER PAGE FOR SPECIAL OFFER THIS MONTH

Special Offer for Month of January, 1910

WE will give the following prizes to the agents sending us the largest number of subscriptions during the month of January, 1910. If you want a first class incubator, brooder or a choice trio of fowls without cost, this is your opportunity. **START TODAY!**

1st Prize---A \$20.00 incubator or brooder, any make you desire, will be given the agent who sends us the largest number of subscriptions to American Poultry Journal during the month of January, 1910.

2d Prize---A \$15.00 trio of fowls, any variety, selected from the yards of an advertiser in American Poultry Journal, will be given the agent who sends us the second largest list of subscriptions during the month of January, 1910.

3d Prize---A \$10.00 incubator or brooder, any make you desire, will be given the agent sending us the third largest number of subscription during the month of January, 1910.

These prizes are given in addition to the grand prizes on opposite page of this issue and all subscriptions sent us during this month will count on both the special January prizes and the grand prizes, therefore you can win both an incubator or brooder and a grand prize if you start to work right now.

Do not delay to take advantage of this opportunity to kill two birds with one stone. Remember, you send 25 cents to us for each subscription and keep the balance of the money as your commission. You receive our grand book, "Origin and History of All Breeds of Poultry," for the first six subscriptions you send us besides your commission and the chance to win one of the January special and grand prizes, also you receive four counts for every 3-year subscription and every Origin and History of All Breeds of Poultry which you sell.

Send for samples and coupons today, they will be sent to you at once free of charge. Start today as you are getting in on the ground floor.

Send all subscriptions to

SINGLE COMB REDS

-AT-

Indiana State Fair, '09

Won 3d cock, 1st and 2d hen, 1st and 2d cockerel, 1st and 2d pullet and 1st pen. Stock for sale.

A Longfield Winner Longfield Poultry Farm
Box 321 : Bluffton, Indiana

Ferris S. C. W. Leghorns

Winners at Louisville, Chicago, St. Louis, Toledo, Detroit, Grand Rapids and the Michigan and Indiana State Fairs

Three prizes on five entries is the record of Ferris' Leghorns at the recent Louisville show, where the cock bird shown above won first prize.

We have bred White Leghorns for years, not alone for exhibition, but also for size, health, vigor and profit. We raise our stock on free range and you will find them as good from a utility standpoint as they are from a fancy standpoint.

Ferris' Leghorns are pure white, have typical Leghorn shape and will win for you as they are winning for others.

Choice breeding males and females, \$3.00 each. Exhibition breeding cockerels, the kind that win and breed winners, at \$5.00, \$7.00, \$10.00 and \$15.00; females of the same quality, \$4.00, \$5.00 and \$7.00. All stock is sold on approval.

Eggs for Hatching

We will have ten exhibition pens mated for the season's trade in eggs and chicks. Prices range from \$3.00 to \$15.00 per setting. Choice utility eggs, \$1.50 per 15; \$7.50 per 100; fertility guaranteed. Place your orders now, we will ship them whenever desired. Day-old chicks after April 1. Mating list will be ready in March.

I want you to have my new 32-page catalog—it tells all about Ferris' Leghorns and why you need them. It shows photos of the birds I sell and gives a more complete description of my stock, farm and methods than is possible in this ad. Write today—I will send you a copy free and will be pleased to quote prices on the stock, eggs or chicks you need.

THE FERRIS POULTRY FARM

Our Wonderful Book Offer

Successful Poultry Culture, Only 50 Cents

American Poultry Journal has just closed a contract with the publishers of "**Successful Poultry Culture**," which enables us to offer this book for one-half its regular selling price, \$1.00. This is such a really good offer and such a bargain that we want every reader to read this ad carefully and take advantage of this great bargain offer. This book has always sold heretofore for \$1.00, and thousands of copies and two editions have been sold at that price, and not one kick has ever been received.

Mr. Clarence Ward

the author of "**Successful Poultry Culture**," is a son of C. J. Ward, the founder and for eighteen years the publisher of American Poultry Journal. He was brought up in a hen coop, and is one of the best experts on poultry culture in the country.

Successful Poultry Culture

contains 128 pages and 30 handsome illustrations of fowls and practical plans for building poultry houses. It is a thorough and scientific treatise on raising poultry for profit; and is especially designed for the beginner. If the instructions in this book are followed success will surely crown your efforts. The publishers have sold thousands of copies of this book to satisfied buyers all over the country, and they can show testimonials by the hundreds from people who would not take fifty times the price of the book if they could not get another one. The chapter on "Scientific Feeding" is alone worth many times the price of the whole book as it actually tells how to

Save Three-Fourths Your Feed Bill

This system of feeding is the greatest and most valuable discovery made in the twentieth century to the poultry man. It will actually double and triple your profits from the start, and has been tried in many large and small poultry plants with the greatest success, and in every case it has placed these poultry plants on a large dividend-paying basis.

The largest item of expense in raising chickens is the feed bill, and if you can reduce this bill three-fourths, it stands to reason that the matter of big profits is solved.

The revised edition of this book,

Successful Poultry Culture

contains a chapter on Scientific Feeding that fully explains this method of feeding. It is based on a fundamental law of nature and is a correct and scientific principle of feeding chickens and ducks that will **save three-fourths the feed bill**, and at the same time will make your young chickens grow faster, lessen the mortality, make young pullets lay at four and five months old; also mature young cockerels for market and show room at the same age. It will make your hens lay in midwinter every day, when market eggs are bringing the highest prices; will keep your laying stock in perfect health in close confinement, and your hens will lay fertile eggs that will hatch strong, vigorous chicks that will live. In fact, with this method of feeding you can

Double and Triple Your Profits in the Poultry Business

This is not a patented or prepared food sold by some manufacturer at a high price. If you know how, all you have to do is to buy one bushel of common grain at the market price, take it home and make **four bushels**, which four bushels will contain more and better food value than the original bushel of grain.

No expense in preparing it; no machinery of any kind needed; no fire or cooking, and it takes less time than to cook a mash and is as easy to feed as common grain. The 128-page new and revised edition of

Successful Poultry Culture

contains this valuable information, and is worth a hundred times its price to every poultryman and stock raiser. It makes no difference whether you keep only a few chickens and one cow or a thousand of each, you cannot afford to be without it. Remember, we guarantee it will tell how to **save three-fourths your feed bill**.

Buy the Book, Price Reduced to 50 Cents

Do it today, for you will need it when you want to sell eggs at high winter prices and at the same time **save three-fourths your feed bill**. If you keep only twenty hens this book will save you twice its price in a few weeks' time after getting it. If you keep more it will **double and triple your profits every day in the year**. Send all orders to

Owen Farms Owen Farms

are receiving your orders for

ORPINGTONS W. WYANDOTTES

WHY? and **THREE** times as many orders as we ever received at the same period

It is a pleasure to answer this question, for there are such a lot of things we **know**. We have won consistently in the hardest shows of the country. We had without question the best stock for foundation stock that this country ever saw. We have sent hundreds of our birds over this great country to our respected customers and they have won for them and have formed the foundation of hundreds of successful strains of Orpingtons. There is no doubt that our **satisfied customers** have been the active means of this enormous increase of our Orpington trade. Then, we have improved our strain by leaps and bounds by good breeding. We have had the best skill in the breeding of Buffs this country ever had applied to the particular case, namely, Buff Orpingtons, so it is not strange that Mr. Owen and Mr. Delano feel pretty good when they say at this present writing, November 14, that they have twelve better Buff Orpington cockerels than they ever exhibited fit and ready for New York. Large, big-boned birds, and fully finished, so we know whereof we speak, with scores of others that are wonders, and we are positive that we can satisfy you all along the line. This is the one point, too, in which we allow our customers the final word. We satisfy you or there is no sale. One of the things we **know** is, there is no farm in America that will more surely send you a \$10.00 bird for \$10.00. If you are expecting a \$25.00 bird for \$10.00 you will not get it from Owen Farms. But you can know the reverse will not happen. You will **never** get a \$10.00 bird for \$25.00. I guess that is what the public is looking for, their value for the money. Now, my conclusion about Buff and Black Orpingtons is this. I never actually wanted your trade as I want it this year. Because I have the goods and I know they are better than ever and in goodly quantity and especially because I believe I can do for you in Buff Orpingtons what no one else can do.

WHY? and **FOUR** times as many orders as we ever received at the same period

I believe the reason for our large increase in the receipt of our orders in White Wyandottes is because of the many friends and interested people who have seen our birds. The old saying is that "seeing is believing" and when we have shown two pullets (all that we did show) at Madison Square in the largest class of pullets ever shown and won first and second, they being two pullets that were as near alike as any two ever shown, and when they looked all along our string and found the same type and perfect head it was convincing and the same way about our cockerels. We won first New York with one bird; sold that bird right there at the show and had a better one left, certainly better at the day he was shown at Chicago, and each and every time these birds are producing the same identical quality that makes them win. Grand heads, absolute perfect whiteness, good combs, fine station, very bright red eye, and altogether a style of their very own. Scores of times every day people in writing us say, "Do not quote us on a bird unless he is something really remarkable. We have plenty of good birds now. What we want is something that is more than good." How glad I am to answer every single individual inquiry for a Wyandotte because I feel that when our inquirer asks for just such a bird that we are perfectly prepared to give him entire satisfaction and in every case the price will fit the bird. My only regret is that you cannot see these birds as we see them day by day, but I promise every White Wyandotte enthusiast and every inquirer for this breed very particular attention and if we have what he wants there will be no doubt about his getting it if we agree on the price. That is the only difference that there could possibly be between us and we will try to be reasonable in that. Write us, therefore, freely about White Wyandottes.

Owen Farms'

You will be reading what I am writing on this particular subject in December and I believe that this is the time of all times in the year when you should commence to think very seriously of what you are going to do in eggs for hatching. Perhaps I speak with far more feeling and certainty concerning this matter because of my own experience. Year after year I have been a little late in getting our pens mated, our hatching operations started and in commencing to bring forward the chicks which were afterwards to prove the winners of our next Year's shows. This last year, however, we came very near the mark which we set and this year I am positive that we shall reach it.

Make your plans for some chicks early, particularly if you have trade for the fall shows. You cannot get fully furnished cockerels and pullets that are ready to show in September unless you get your birds out very early. We have made some experiments and I am positive that we shall be able this year to send eggs right through the winter to the southern half of the United States so that they will reach you in good shape and hatch well. They will be packed with extreme care and handled at this end so that when they start we will know they will go to you in good condition if the express companies are

Owen Farms Owen Farms

are receiving your orders for
WHITE P. ROCKS **BARRED P. ROCKS**

WHY? and **THREE** times as many orders as we ever received at the same period

WHY? and **SIX** times as many orders as we ever received at the same period

Who has guaranteed to win for their customers in Chicago, Pittsburg, Baltimore, Philadelphia, Boston, Providence, Buffalo, Omaha and scores of other cities and made their guaranty good? That is the question. It is these continuous wins of ours for our customers and the hammering upon hammering that we have been doing all the time on the White Rock that has made our business what it is. I have felt for years that there was an individual character as to the color and type of our White Rock that was entirely different than anyone else's and superior to anyone else's. I have felt this strongly. I never was more convinced of it than at Madison Square Garden last year. There were 26 White Rock pens along the Garden for judging. They were right in the center of that very large hall. On the second day of the show a Western purchaser came to me and said: "Mr. Owen, I have been studying for twenty-four hours these White Rock pens. I am willing to say after the most careful study that in your pens alone do I find the whiteness and luster which makes them stand out so entirely by themselves. I have even gone so far as to feel of your birds as compared with other pens and they have more delicate, velvety feeling to the touch than any other pens." My reply was, "I believe you have hit the nail on the head. Our White Rocks have a whiteness and a smoothness and softness of feather that no others have, and coupled with their perfect type and excellent head points it is really what makes them win." If the United States was not so large and our customers so widely separated I should be inclined to say to you as one of the great automobile builders has been saying for years, "Ask the man who owns one," and leave the question of whether you would be interested in Owen Farms White Rocks entirely to that test, but I know the conditions will not permit it and I find it necessary to say to you a great many things about our White Rocks that I wish I could show you instead. Always remember we will fit for the show and we will guarantee to win any show you name.

I am perhaps more pleased to tell you my reason for our large trade in Barred Rocks than in any other variety. It touches me personally in a tender spot, namely, our public's confidence in Owen Farms. To a fair extent we are really being weighed in the balance as regards Barred Rocks, certainly in the minds of a very great many people in the United States. We have been breeding some fine birds for many years, but we have never shown them. We have acquired, and that fully and completely, the best flock considered from both standpoints of the male and female that we believe existed in the United States, namely, the Gardner & Dunning flock. They have been under the care of and mated by Mr. Newton Cosh and our Mr. Delano, in whom we have unlimited confidence, and the interesting question that is going to be answered very soon is whether Owen Farms has made good with these Barred Rocks. Well, now, I am going to say one thing in advance of the New York Madison Square show: that as far as we are concerned we know that we have made good. We have better cockerels than we ever commenced to show considering all of the old prestige of the Gardner & Dunning flock. We have better females than we believe they ever showed. We believe it is true that never in the history of Madison Square Garden have the cockerel and pullet which took the premier honors in a single year been bred by the same individual. I wonder if it will happen this year? There are some people that I know of who are confident they have a good chance this year for both the premier honors in cockerel and in pullet. At any rate, we know that we are going to put forward for competition at New York the best string that Owen Farms believes ever went there and we shall certainly hope for great success. It is a far different proposition to go to the State Fair at Syracuse in Barred Rocks or White Wyandottes than to go to Madison Square Garden and ask for the same blue ribbons. In Barred Rocks this year we made a wonderful win at the State Fair. There were thirty ribbons in all: five in six different classes, for they had a class of pens made up of old birds and of pens made up of young birds. Twenty-two out of those thirty ribbons Owen Farms won. I could not go into the matter at length except to say that our birds were in fine feather and did themselves great justice, winning grandly. That I can furnish you Barred Rocks in cockerel matings and in pullet matings this year second to none in this country and at the right price I am as positive as I ever was of any statement I have ever made.

Eggs for Hatching

not unduly severe in their handling of them. Furthermore, we are going to be prepared to give you information concerning the eggs earlier than ever.

After the most careful consideration on the part of Mr. Delano and myself we have decided fully this year that we shall sell from the run of our pens, giving everybody an equal opportunity of raising some of the very best of the year at a medium price. Only the very best birds that we own will be used in our matings, both in the male and the female line. Our price will be a uniform one: 75c per egg when ordered in a single sitting; 60c per egg when ordered in fifties; and 50c per egg when ordered in hundreds. We shall have no other price than this price for our eggs during the season of 1910. We guarantee three eggs out of every four to be fertile. We solicit your correspondence and our mating list, which will tell you all about it, will be duly mailed you upon request.

Catalogues sent with full information free. Please be particular to always indicate the BREED you wish or would also thank you to always give credit to the journal in which you see our advertisement appear. Always

There is But ONE PEARL GRIT

There are a lot of our regular customers who have tried other preparations that were supposed to do what Pearl Grit DOES, and they give us but one verdict—THERE IS BUT ONE PEARL GRIT. They tell us these things because of their enthusiasm and confidence in something that actually DOES what we claim for it. We don't claim it is a world wonder, but it does provide poultry with nature's need. It provides it so well that our regular

customers buy Pearl Grit as they buy groceries—it's a poultry expenditure that is a sure investment through extra egg production. There are a lot of poultry yards that would pay expenses without, that pay a profit, a handsome profit, too, with Pearl Grit. That's exactly what Pearl Grit is for. We want you to share in the benefits it brings to others. Our FREE Pearl Grit Booklet gives you detailed information. It's worth having. Will you write to-day?

OHIO MARBLE COMPANY, 709 S. Cleveland St., Piqua, O.

WE SAVE YOU FIFTY PER CENT \$1.50 FOR 75c

Three of the Best Poultry Publications, Practically Supplying the Entire Needs of Every Poultryman, at One-Half the Regular Price

Our Big "3" Combination

**American Poultry Journal } ALL THREE FOR
Western Poultry Journal } 75 CENTS
Farm-Poultry } Regular Price, \$1.50**

American Poultry Journal is the oldest, largest and handsomest poultry paper in the world, and is conceded to be the leader in all things pertaining to poultry. Is copied by both old and new poultry publications. In fact, it has no equal. Now in its 40th volume.

Farm-Poultry, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 20th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

Western Poultry Journal, published at Cedar Rapids, Iowa, is in its 21st volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, thoroughly cover the entire field of poultry literature, and make a poultry library in themselves.

The Greatest Combination Ever Offered

and especially so when you take into consideration the fact that American Poultry Journal contains from 60 to 150 pages of interesting matter, any number of which is worth more than we are asking for one year's subscription to all three magazines.

This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

Roup Cured

A Remarkable Cure

Dix, Ill., Dec. 1, '09.
I recommend Kemiform as the best remedy for roup I have ever tried. Had hens with head and eyes swelled shut and only two applications cured them sound and well. Shall keep it always on hand. (signed) W. I. Pfäum.

The above statement is one of the many we are receiving. Isn't that the remedy you want? No need of waiting a month for recovery with

TRADE MARK
KEMIFORM

It is truly called the remedy of many uses, because of its safe and satisfactory action in curing and preventing nearly all dangerous poultry diseases. A tablet in the drink every third day puts the whole flock in a healthy, profitable condition—produces vigorous action, sparkling eyes and fiery red combs. One box of tablets makes 25 gallons of agreeable health-giving Kemiform solution, which chickens like. Sold under money-back guarantee. Price 40c postpaid and 15 leg bands free. Sample for red stamp and name of your dealer. Address

A Treatise on Food and Egg Production

A valuable book for anyone who is raising fowls for egg production. It gives in a very plain and concise form the composition of the different foods.

It tells how and what to feed to produce eggs in winter.

The author has sent this book on approval and has always received the money for same at once, which is proof that the book is valuable.

By special arrangement with the publisher we are offering this book and one year's subscription to American Poultry Journal for only \$1.00. Send all orders to

American Poultry Journal Pub. Co., 358 Dearborn St., Chicago

Twelve Months' Work in the Poultry Yard

By W. Theo. Wittman, Acknowledged by All to be One of America's Foremost Authorities and Judges

Starts you in January, and take you clear through the year—telling you just what to do to successfully handle your fowls in the safest and most economical way that is consistent with good business methods, to make the largest success possible with your fowls.

It doesn't tell you how to make two hundred dollars from twenty hens

but it gives you a short, boiled down, and up-to-date treatise on lines that are practical and can be executed with safety. The contents of this book are intensely practicable, and teach a method of poultry keeping exactly opposite to that which is complicated and unnecessary. **Price 25 cents.**

THE POULTRY ITEM

The largest Eastern poultry Journal, published at Sellersville, Pa., 68 to 140 pages monthly. Special breed numbers starts in September and continue until May, 1910. Tells you how to secure larger and more profitable returns from your chickens. Extremely helpful and valuable. Get a-going right in the poultry business. Many are making \$2.00 per hen each year. Are you? The Poultry Item will keep you posted on latest methods and poultry secrets. The Item stops when time is up. **Price 50 cents the year.** Order it now at the following special terms.

A Year's Subscription to The Poultry Item and Twelve Months' Work in the Poultry Yard, only 50c

Address all orders to

The Poultry Item :: Sellersville, Penna.

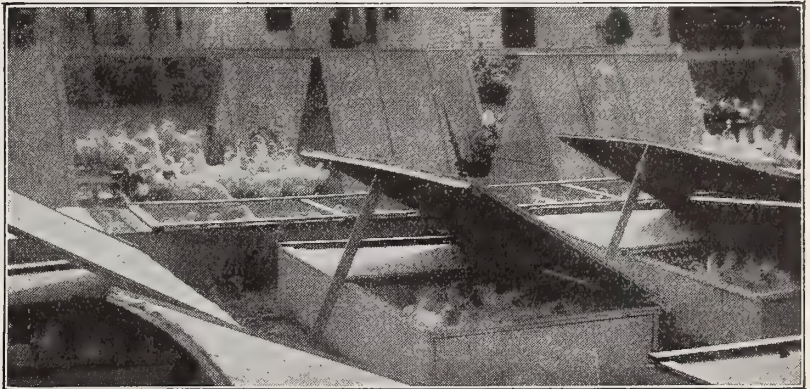

A LIVING FROM POULTRY

\$1,500.00 from Sixty Hens in Ten Months on a City Lot 40 Feet Square

TO the average poultryman that would seem impossible and when we tell you that we have actually done a \$1,500 poultry business with sixty hens on a corner in the city garden forty feet wide by forty feet long, we are simply stating facts. It would not be possible to get such results by any one of the systems of poultry keeping recommended and practiced by the American people, still it is an easy matter when the new

Philo System

is adopted.

The Philo System is Unlike All Other Ways of Keeping Poultry

and in many respects just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard-of results that are hard to believe without seeing.

The New System Covers All Branches of the Work Necessary for Success

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss, and the broilers are of the very best quality, bringing here three cents per pound above the highest market price.

Our Six-Months-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with food others are using.

Our new book, the **Philo System of Poultry Keeping**, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and fifteen pages of illustrations showing all branches of the work from start to finish.

Don't Let the Chicks Die in the Shell

One of our secrets of success is to save all chickens that are fully developed at hatching time, whether they can crack

the shell or not. It is a simple trick and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

Chicken Feed at 15 Cents a Bushel

Our book tells how to make the best green food with but little trouble and have a good supply, any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food and is to keep a cow without hay or fodder.

Our New Brooder Saves Two Cents on Each Chicken

No lamp required. No danger of chilling, over-heating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all the lice off the chickens automatically or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to take and use them. One can easily be made in an hour at a cost of 25 to 50 cents.

Testimonials

Bellefontaine, Ohio, June 7, 1909.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—I just want to tell you of the success I have had with the Philo System. In January, 1909, I purchased one of your Philo System books and I commenced to hatch chickens. On the third day of February, 1909, I succeeded in hatching ten chicks. I put them in one of your fireless brooders and we had zero weather. We succeeded in bringing through nine, one got killed by accident. On June 1, one of the pullets laid her first egg, and the most remarkable thing is she has laid every day since up to the present time. Yours truly,

R. S. LaRue.

Valley Falls, N. Y., September 10, 1909.

My Dear Mr. Philo:—I want to tell you how pleased I am with my use of the Philo System during the past year. The fowls laid exceptionally well in the New Economy Coop, much better in proportion than those in my old style house. The fireless brooder has solved the problem for me of raising extra early chicks. I am going into your methods more extensively this coming year. Wishing you success, I am, Sincerely yours,

(Rev.) E. B. Templer.

Osakis, Minnesota, June 7, 1909.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—You certainly have the greatest system the world has ever known. I have had experience with poultry, but I know you have the system that brings the real profits. Yours,

Jesse Underwood.
Brookport, N. Y., Sept. 12, 1908.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—I have had perfect success brooding chickens your way. I think your method will raise stronger, healthier chicks than the old way of using lamps and besides it saves so much work and risk. Yours respectfully,

M. S. Gooding.

South Britain, Conn., April 10, 1909.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—I have followed your system as close as I could; the result is a complete success. If there can be any improvement on nature, your brooder is it. The first experience I had with your System was last December. I hatched seventeen chicks under two hens, put them as soon as hatched in one of your brooders out of doors and at the age of three months I sold them at 35 cents a pound. They then averaged two and a half pounds each, and the man I sold them to said they were the finest he ever saw, and he wants all I can spare this season. Yours truly,

A. E. Nelson.

Send \$1.00 direct to the publisher and a copy of the latest revised edition of the book will be sent you by return mail.

E. R. Philo, Publisher, 14 Third Street, Elmira, New York

The Poultry Review A monthly magazine devoted to progressive methods of poultry keeping. \$1.00 a year. Edited by E. R. Philo, author of the Philo System book. Results of experiments on his poultry plant are given each month. Rev. W. W. Cox, associate editor, is handling a six-hen plant by the Philo System and will give full particulars each month of every step taken to secure the largest returns from six hens. Also a review of the best poultry articles from other publications. The price of the Review is \$1.00 a year for twelve copies by mail, postpaid. Or with the Philo System book for \$1.50.

MICA-CRYSTAL THE BEST GRIT ON THE MARKET

Contains Mica, Iron, Magnesium and Quartz, each in its purest and best form. It is of such peculiar formation that it will not take a polish as is the case with grit made from white quartz or marble and unlike limestone grit, or grit of like soluble substances, is not dissolved by the fluids in the crop, consequently it never loses its sharpness. It sharpens itself by contact, the only grit that does, and therefore excels all others as a grinder.

Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Grit is to the fowl what teeth are to other members of animal creation.

Let us prove the truth of what we say by filling a sample order for you. Manufactured only by

MICA-CRYSTAL CO. - - - CONCORD, N. H.

Four First-Class Poultry Publications, Published in Different Parts of the U. S., at One-Half Price

American Poultry Journal - - - } \$1.00
American Poultry Advocate - - - } Regular Price \$2
Poultry Item and Commercial Poultry

AMERICAN POULTRY JOURNAL needs no introduction, as it is the oldest, largest and best poultry paper in the world. Is the leader of the poultry press, and is now in its 40th volume. No poultryman can afford to be without it, as it has no equal.

AMERICAN POULTRY ADVOCATE, the great New York state paper published at Syracuse, and full of good reading matter, is always welcomed by the subscriber. Now in its 18th volume. It is conceded to be one of the best poultry papers published in the east.

POULTRY ITEM, published at Sellersville, Pa. Now in its 12th volume, and although a young publication compared to the others embraced in this offer, it is safe to state that Poultry Item is rapidly pushing toward the front. Full of valuable information and complete show winnings.

COMMERCIAL POULTRY, published at Marseilles, Ill., is now in its 18th volume. True to its name, it instructs the reader on poultry as a business. Its volumes contain articles by excellent writers who contribute regularly and make it interesting for the reader.

When reading this do not lose sight of the fact that American Poultry Journal contains from 60 to 166 pages of interesting reading matter; that it has a strong corps of field men who report on conditions in their territory each month so that it contains the "newsiest" news of the poultry world. A single copy is worth more than we ask for one year's subscription to all four.

TRY IT AT OUR EXPENSE

**NO. 9
DANDY**

Try a "DANDY" Green Bone Cutter for 15 days at our Expense.

Know what a good, cheap feed it will prepare for you.

We make the "Dandy" in several sizes, suitable for the man with a dozen hens as well as the man with a thousand fowls. We can fit your needs at a price you can afford to pay.

GREEN BONE is a money-making feed that practically costs the poultryman nothing. With a "DANDY," he prepares it himself from scraps that would otherwise be wasted.

Green Bone furnishes in greater measure than any other available poultry food, the elements necessary to keep poultry egg-producing. It supplies flesh and muscle-making nutriment, keeping the fowl in excellent working order.

The "Dandy" prepares the cut green bone properly for feeding—like coarse corn meal—does not crush, splinter or leave it in lumps. By its correct construction it grinds fast, runs easy, and is quickly and easily cleaned—good points that you will appreciate. No other cutter compares with the "Dandy," and we want to send you one on 15 days free trial so that you can see for yourself just how and why it is superior to them all, and why it will be a money-maker for you.

Write for free catalog giving sizes and prices of cutters. It also contains a lot of valuable information about green bone and how to feed it.

Be sure to ask for our free trial plan and get your order in early.

Money in Poultry, \$3,600.00

NET PROFIT FROM 30 HENS IN ONE SEASON ON A LOT 24x40. IT IS NOT AN EXPERIMENT, IT HAS BEEN DONE ON THE Kellerstrass Farm

My New Poultry Book

Covers all branches necessary for Success with Poultry. It tells you what I have done. It was written from actual experience.

IT TELLS YOU HOW—

HOW I made \$3,600.00 in one season from thirty hens on a lot 24x40 by feeding them the scraps from my table three times a day. The test was made to show what can be done on a city lot as well as on a farm. I also furnish you the names of the parties who paid me over \$2,000.00 for the eggs alone from these thirty hens, for reference, which is evidence undisputable. Remember this book is written by a man who has had the actual experience.

HOW I make my chickens weigh two and one-half pounds when they are eight weeks old.

HOW I prepared my chickens for the show room so that I won over 90 per cent of all the blue ribbons that were offered during 1907 and 1908, the last season that I showed. A "secret" that has never been published before.

HOW I built my indoor and outdoor brooders for 85 cents each, to be used either as fireless or with heat in them and plans for the same.

HOW I raise ninety-eight chickens out of a hundred that I hatch.

IF YOU RAISE CHICKENS OF ANY KIND YOU NEED THIS BOOK

Try My Way and You Can Raise Them by the Thousands

READ WHAT OTHERS SAY

Ernest Kellerstrass, Kansas City, Mo.

Dear Sir:—I herewith enclose you affidavit; also trap nest record of the Kellerstrass Strain Crystal White Orpington hen, register No. 503, that laid two hundred and sixty-three (263) eggs in 272 days.

(Signed) P. J. HARLLEE,
August 8, 1909. Chattahoochee, Ga.

Ernest Kellerstrass, Kansas City, Mo.

Dear Sir:—Congratulations on the splendid showing you have made by selling \$68.00 worth of eggs per hen from thirty hens in one season.

G. M. CURTIS, Editor Reliable Poultry Journal,
Quincy, Ill.

My Dear Mr. Kellerstrass:

I have sixteen of your hens that average two hundred and thirty-one (231) eggs per bird in 12 months.

July 10, 1909.

The simplest sort of a thing—common black dirt—has solved the problem of eradicating a chicken disease which cost thirty million chicks' lives annually, a disease which scientists of the National and State Experimental Stations have been studying without success for ten years. Ernest Kellerstrass, the Kansas City poultry fancier, found the secret.—St. Louis Republic.

May 23, 1909.

The remarkable hen "Peggy" is owned by Mr. Ernest Kellerstrass, of Kansas City, Mo. She has traveled all over the globe capturing prizes. Mr. Kellerstrass has forty-eight hundred chickens

HOW I took a flock of chickens and made them lay \$68 worth of eggs per hen in ten months!

HOW I keep my male birds from fighting without injuring them.

HOW I raised the five chickens I sold to Madame Paderewski for \$7,500.00.

HOW I feed my chickens for egg production.

HOW I keep my chickens healthy and free from sickness.

HOW I select a good laying hen from the poor layer.

HOW I break up my broody hens without injuring them.

HOW I pack my eggs so they will stay fresh.

HOW I mate up my chickens for breeding and fertility.

HOW I run my incubators and supply moisture.

HOW I raised my famous \$10,000.00 hen "Peggy."

HOW I build my hen houses and plans for the same.

HOW I bred my big egg-laying strain.

It also tells about broiler plants, egg plants, and remember, there is also an article in this book called "Two Years on the Kellerstrass Poultry Farm," which explains hundreds of things—just what we do in two years on the farm, or in other words, a two years' course on the "World's Greatest Poultry Plant." This is the greatest article ever written by a real practical poultryman.

Remember, this book was written by a man who has sold the highest priced chickens in the world, who also sold \$68.00 worth of eggs per hen from a flock of hens in one season, in fact, if you breed a chicken of any kind you know my reputation as a breeder. This is the first time I have ever offered to sell any of my "methods or secrets" to the breeder or to the public.

of this family and Peggy is the most perfect. He controls the output of perfect Orpingtons.—Sunday Chicago American, March 19, 1909.

Mr. Kellerstrass is now easily one of the leading and most successful breeders in America, and perhaps during the past two or three years raised more good prize-winning birds on his farm, devoted exclusively to White Orpingtons, than any other breeder on this continent.—Poultry Success, Springfield, Ohio, February, 1909.

The White Orpingtons began their real history in the American fancy when Mr. Ernest Kellerstrass took them up. Mr. Kellerstrass has done for this variety and for the breed of Orpingtons in general what no other man has ever accomplished for any other breed.—American Poultry Journal, Chicago, Ill.

It was a rare treat to spend a day in September at the Kellerstrass Farm, where were originated the Crystal White Orpingtons, now famous the world over. Mr. Kellerstrass himself does the work of a half dozen expert poultrymen and does it right. Mr. Kellerstrass exhibited upwards of \$25,000 worth of birds at the Chicago Show.—Western Poultry Journal, Cedar Rapids, Ia.

Mr. Kellerstrass has taken the chicken business out of the kindergarten class, and has done more to encourage the poultry business than any ten breeders in the United States combined. The Kellerstrass Farm won over 90 per cent of all premiums offered. We doubt if any breeder in the world ever sold stock or eggs that produced as many winnings in one season as the Kellerstrass Farm did in 1908. The Inland Poultry Journal takes its hat off to men of this kind.—Judge Theo. Hughes, Editor Inland Poultry Journal, Indianapolis, Ind.

Mr. Ernest Kellerstrass, of Kansas City, Mo., is the owner of the most perfect fowl in the world, according to the National Poultry Association of America.—New York Herald, March 15, 1908.

"Peggy," the \$10,000 hen owned by the Kellerstrass Farm, was viewed by over half a million people around the southern circuit of State Fairs, which included Nashville, Memphis and Atlanta.—Southern Poultry Magazine, Nashville, Tenn., December, 1908.

Send \$1.00—and a Copy of the Latest Revised Edition of the Book Will be Sent You by Return Mail

Address ERNEST KELLERSTRASS, Publisher, R. F. D. 1, Box 98, Kansas City, Mo.

NOTE: Ask any editor of any Poultry Journal or any "licensed" poultry judge as to my reputation as a breeder.

You, Reader, Can Do With Our Incubator What Others Are Doing

What We Claim, We Prove

Standard Cyphers Incubators are warranted to hatch, year in and year out, larger percentages of good, strong, sound chickens and ducklings than any other make or style of incubator on the world's markets—and they do it.

OUR 1910 COMPLETE CATALOG is brimful of the proof. Here we present a case in point showing Cyphers dependability

—Cyphers uniformity in profit-earning hatches. Poor hatches with an incubator *should be* the rare exception. Hundreds upon hundreds of pleased Cyphers Company customers are getting most favorable results. Here is an example:

Mr. R. P. Ellis, Brooklyn, N. Y., is the originator of the Aurora Chain of Branch Egg Farms; a co-operative establishment which has been most successful and profitable

in supplying eggs to the New York markets. The following certificate from Mr. Ellis will indicate the size and importance of this organization. The fact that it is a profit-making successful Poultry Farm or Chain of Farms, is proof that their plan of operating and their equipment is also most satisfactory. Needless to say they have Cyphers Company equipment. Read Mr. Ellis' certificate. Here it is:

Hatched Over 25,000 Chicks in Cyphers Standard Incubators

AURORA LEGHORN FARM

R. P. Ellis, Proprietor

SINGLE-COMB WHITE LEGHORNS EXCLUSIVELY—BRED TO LAY
2406 Flatbush Avenue, Brooklyn, N. Y.

Executive Department and Breeding Farm of the Aurora System.

Highest Grade of Poultry Products Delivered Direct to Private Residences.

Telephone, No. 956 Flatbush.

To Whom It May Concern:

This is to certify that on the home farm of the Aurora System of Branch Farms, between the dates of March 16th, 1909, and September 23rd, 1909, we hatched in *Cyphers Standard Incubators*, manufactured by the Cyphers Incubator Company, Buffalo, N. Y., U. S. A., 25,268 good-sized, vigorous, healthy, utility-strain White Leghorn chicks from 30,082 fertile eggs, or an average of 83.9 per cent of all the eggs that were fertile and hatchable. All hatches are included in the count, no partiality being shown to the machines. Out of ninety-five hatches two only were below 70 per cent, one of these being a 66 per cent hatch, the other a 69 per cent hatch. Of the ninety-five hatches twenty ranged from 70 to 79 per cent, fifty-seven ranged from 80 to 89 per cent, and sixteen ranged from 90 to 96 per cent. Hatches were made in all kinds of weather, the first hatches being started February 2nd, and the last hatch was taken off September 2nd. Reckoned by months the hatches averaged as follows, the eggs being set in the months named:

February—89.3; March—81.5; April—82.3; May—87; June—86.5; July—81.6; August—82; September—83.

We have never heard of better average hatching results, covering so long a period of time, and with so large a number of different hatches; and we do not know of any other make of incubator that could equal it. Your New York branch house will have my order for all the additional machines that our plant shall have trap-nested breeders of 160-egg, or better performance, to fill. We estimate that we shall set next season between 60,000 and 75,000 of our trap-nest-bred Leghorn eggs.

Our home farm and a majority of the branch farms use your adaptable Hovers, and they have given complete satisfaction.

AURORA LEGHORN FARM

Proprietor.

Aurora Leghorn Farms

Women and Beginners Are Successful With Cyphers Incubators

"This Is My First Year's Experience."

"Ellington, Conn., July 15, 1909.

"Cyphers Incubator Co., Buffalo, N. Y.

"My banner hatch was 93 per cent of all eggs set, and all my hatches averaged 84 per cent. *The chicks were very strong and healthy, and I was much pleased with them.* I have one of your Style A, 1909 Brooders, and the chicks are doing nicely. I find both Incubator and Brooder to be A1. I also use your Chick Food with great success. This is my first year's experience in the business.

MAX BERTZ."

"Is This Not Good For My First Attempt?"

"Mahoningtown, Pa., June 21, 1909.

"Cyphers Incubator Co., Buffalo, N. Y.

"The No. 0, 70-egg incubator I bought of you this season has proven to be very successful. I am an amateur in the poultry business, but am well pleased with my present results. I set the machine with 68 eggs; tested the 13th day, and found 53 fertile eggs, and on the 21st day there were 45 chicks hatched. *They are all living and doing well.* Is this not good for the first attempt? I have been feeding them on Cyphers Chick Food. I have shown my incubator to a great many people, and they all think it the most perfect machine they have ever seen.

PERRY THOMAS."

"It Is My Duty to Let You Know."

"Lebanon, Pa., June 19, 1909.

"Cyphers Incubator Co., Buffalo, N. Y.

"I think it my duty to let you know of my success with your No. 1 Incubator and Style B Brooder which I bought from your local agent last March. I took three hatches from your incubator so far, and have the fourth in now. From the first hatch I got 84 chicks from 99 fertile eggs, all healthy and strong; hatch No. 2, I got 97 chicks from 106 fertile eggs; No. 3, I got 107 chicks from 128 fertile eggs.

"This is my first experience with an incubator and brooder, never having seen any before. The chicks from the first hatch are nine weeks old, and they weigh from 1½ to 1¾ pounds, which I think is very good. My faith in your machine is great.

R. T. YOEUW."

"Will Hatch Every Good Egg."

"Accomac, Pa., July 16, 1909.

"Cyphers Incubator Co., Buffalo, N. Y.

"Last February, I bought from your agents, Messrs. Sprecher & Gans, one of your No. 1 Standard Incubators. I set the machine running and hatched 98 as fine little chicks as ever came through an egg shell. *I set, all told, 498 eggs, and hatched 427 chicks, which is not so bad for my first attempt.* Then I got 100 Pekin duck eggs, and hatched 78 of them. I will say that Cyphers Incubators will hatch every good egg entrusted to them.

LEONARD WALLER, JR.

"This is Considered Phenomenal."

"Adams Run, S. C., March 26 1909.

"Cyphers Incubator Co., Buffalo, N. Y.

"It may be of interest to you to know that my last hatch of 110 chicks was the result of 118 eggs left in incubator, and this is considered phenomenal by those of my neighbors who use incubators.

DR. J. T. TAYLOR."

"Raised 192 out of 200 Chicks."

"Canton, Mass., June 7, 1909.

"Cyphers Incubator Co., Buffalo, N. Y.

"I have been in the poultry business two years previous to this season, and had a failure each year in the raising of my chicks. *This year I bought one of your Style A 1909 Brooders, and am having such good results with it that I bought another of the same style.* Out of 200 chicks I have raised 192. They are all growing well. Your Chick Food, also, cannot be surpassed.

MRS. CHARLES MCCARTHY."

"Ninety-five Perfect Chicks From 101 Eggs."

"New Haven, Conn., July 28, 1909.

"Cyphers Incubator Co., Buffalo, N. Y.

"This year we bought a No. 2 Cyphers Incubator and Style A Brooder. They are fine. One hatch was 95 perfect chicks from 101 fertile eggs. Another hatch, *I forgot the eggs and left them out from 8:30 A. M. to 10:30 P. M., but I got 137 fine chicks from 150 eggs.* Every hatch has been over 90 per cent. The brooder is just as good as the incubator.

ADA A. LEIGH."

To the Chicken-Raiser Who Wants Biggest Hatches - Healthiest Broods

DOUBTLESS you are looking forward to the day when you will own a Cyphers Incubator. Why *postpone* your satisfaction and savings?

Why worry along trying to *coax results* with an inferior incubator—that hatches a poor percentage under “21 days’ protest?”—

That is a *losing proposition from the start*—When the best—the standard machine of all—is so easily obtainable?

We want to hear from every man and woman in this country who is aiming to make the most money in chickens—who wants to

Make the Best Start

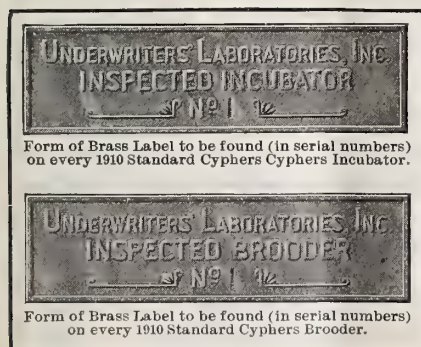

We want to prove to them the big mistake they make by “experimenting up” to Cyphers quality.

And that—first or last—the Cyphers is the most *economical* proposition they can possibly consider.

The Cyphers Is an Incubator of Known Quality

It has the standing, the reputation! It is used by more Government Experiment Stations and by more large, practical poultry plants, by more fanciers of national reputation—than any other.

It is not only the incubator for the big and successful poultry raiser—It is the incubator for the beginner.

It guides him away from faults and failures. Does not bother him with moisture troubles, heat troubles, ventilation troubles. It is trouble-proof—almost neglect-proof. Give it 10 minutes’ attention each day—that’s all.

Address Nearest Office

Cyphers Incubator Company, Dept. 30,
Buffalo, N. Y.; New York City; Chicago, Ill.; Boston, Mass.; Kansas City, Mo.;
Oakland, Cal. Reliable agents in principal cities and towns. (2,000 selling agents.)

The Standard Cyphers Incubator is made of Michigan White Pine. That is the best wood for incubators.

We Pay From \$10 to \$20 More

—per thousand feet—to get this lumber than we would have to pay for the kind used in the poorer incubators.

The most efficient *resistant* to heat and moisture.

The Cyphers is a hot-air incubator—because *that* is the best system.

You don’t want a machine with a tin or galvanized tank in it—that, sooner or later, springs a-leak, soaks the eggs and spoils your prospects. A metal tank is bound to accumulate sediment. That makes *uneven* heat.

Our Patented Diffusive Principle

applies the heat gently and evenly through porous diaphragms; diffuses and draws it out through a lower set of diaphragms. No air currents or *direct drafts* to chill the eggs. The Cyphers is a genuine non-moisture incubator—no added moisture is required. It also is self-ventilating.

The self-regulating device is perfect. The steel regulator of the thermostat never changes. Other makes have wafers and discs that get out of shape or fail to work.

The drop-bottom, which gives extra ventilation in summer in warmer rooms and hot climates, is another special Cyphers feature.

Also the handy nursery drawers in Nos. 2 and 3 Cyphers. They let you take out chicks and ducklings without disturbing the rest of the hatch.

The Cyphers Were the First Inspected and Insurable Incubators and Brooders.

The first to be perfected and safeguarded in heater, lamp and general construction to conform to the rigid “Rules and Requirements” of the National Board of Fire Underwriters. The first to be tested, *approved and labeled* by the Insurance Engineers. Every Cyphers Incubator and Brooder bears the Inspection label of the Underwriters’ Laboratories, placed thereon under the direction of the National Board of Fire Underwriters.

Cyphers Incubators Are Guaranteed to You

Test a Cyphers Incubator at our risk. Use it for four hatches—90 days.

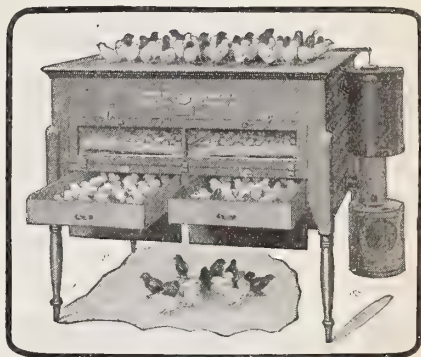

If it doesn’t prove all that we claim for it as a *standard incubator*—return it, after FAIR TRIAL, within 90 days—and your money will be refunded.

Every Cyphers is warranted for 10 years, without repairs, if given ordinary care.

Learn all about our \$40,000 experimental and demonstration Poultry Farm. Seven popular varieties. Stock and Eggs for sale.

Write for Our 1910 160-Page Cyphers Catalog

Our book this year is more instructive than ever, more fully illustrated. It shows the leading poultry farms all over the coun-

try where Cyphers machines are in use—gives real letters from their owners, every one *dated* and signed. It describes and illustrates Cyphers Incubators and Brooders from popular sizes up to the Mammoth machines for big, practical poultry plants—and the 70-odd Cyphers special poultry products.

And it tells of our latest achievement—Cyphers Electric-heated and Electric-lighted devices for hatching and brooding chickens—usable everywhere that a constant electric current exists for ordinary lighting purposes.

Keep Roup Out of Your Poultry Yard!

It takes quick action and a sure remedy to save your flock, once this deadly and highly infectious disease makes its appearance. One sick bird will infect the entire poultry yard—there is no time to experiment with unknown and untried "Roup Cures."

CONKEY'S ROUP REMEDY

has stood the test for years, and thousands of poultry raisers everywhere know that it does the work. A little now and then in the drinking water of the well fowls will insure your birds against Roup; and the worst cases yield readily to its healing influence.

One 50c Box Makes 25 Gallons of Medicine

Get a package of Conkey's Roup Remedy, and put a thimbleful in the drinking water. Let your fowls drink all they want. It's no trouble to treat the whole flock; results are quick and sure.

You Can't Afford to Take Risks!

An outbreak of Roup may occur at any time. You are never safe unless you keep a package of Conkey's Roup Remedy on hand, and use it occasionally to keep your fowls in perfect health.

Poultrymen everywhere send in the verdict that Conkey's is the only real preventive and cure for Roup in existence. We have such great faith in it that we unhesitatingly offer you

Your Money Back if it Fails

If you buy a box of Conkey's Roup Remedy and it fails to do the work, we **refund the money** on receipt of the empty box. We send you the cash by return mail and ask no questions. Price 50c and \$1 postpaid.

Get a Copy at Once! Just Off the Press! Going Fast! Conkey's Poultry Book!

New 1910 edition, revised and greatly enlarged. Every owner of fowls should have this book in the house. Tells you everything you ought to know about poultry. Filled with valuable information that obtained in any other way would cost you hundreds of dollars and years of costly experience. The whole subject of Housing, Feeding and Care of Fowls, How to Increase Egg Production, How to Secure the Largest Percentage of Healthy Chicks—**everything** is covered by experts.

Remember, we want to send you this great money-making, money-saving book **absolutely free**. Just send us your poultry-supply dealer's name and 4c in stamps for postage. **Do it today.** We had a large edition printed, but the enormous demand is rapidly exhausting it.

If you can't obtain our remedies from local dealer, write direct to us.

Natick, Mass.

N. B.—No birds in breeding pen under 90 points for fowls or 92 for chick and up to 96 points.

I Stand On the Record

NOTICE!

I want it emphatically understood by the many good readers of this paper that I personally stand back of the 58,341 "QUEEN" Incubators which my company has sold since five years ago to-day; that I will stake every dollar I have, and my home place, if it is necessary, to make good every offer and statement I make here or elsewhere.

I point with pride to the "QUEEN" Incubator. Its magnificent record has amply justified my claim that in "hatchability" and durability it stands supreme and alone.

The "QUEEN" is the **only** incubator that **always** hatches **healthy** chicks, turkeys, ducks or geese—that **always** automatically holds its **proper temperature**—that **always** ventilates **automatic-ally**—without chilling eggs—that **always** saves fuel and annoyance at every hatching—that lasts so long that it may **always** be sold on a legal 5 year guarantee.

I am willing to go about the limit in making poultry friends and getting folks to try my "QUEEN."

1. I'll give you 90 days to try it. Or I'll give you more time if you say three months aren't enough.
2. If you decide to keep the "QUEEN," I'll warrant it for five (5) years. Draw up the guarantee to suit you if you don't like mine. I'll sign it and **back it up**. I am giving the incubator fellows that talk "guarantees" something to think about. I make the best incubator in the world and never have been a bit squeamish about protecting my **customers**.
3. I'll pay the freight on any "QUEEN" and give you a bargain—direct from my factory—based on the one small profit that will be made on 20,000 "QUEEN" Incubators this season.

Getting an incubator should be like getting any other machine. You're getting it to use—to hatch chickens that will grow into money for you—and you don't want to overlook **QUALITY**. But you may say that a cheaper machine will do the work just as well. Perhaps it will **to-day**—but how about a year from now? Why not let the thousands of "QUEENS" in the homes all over this country prove which is the **best machine for you?** You can't get "QUEEN" results with anything but a "QUEEN." Please remember this.

Notify Me At Once, Please

I can't tell you **all** the **whys** and **wherefores** here, but if you are really interested, you won't mind spending a cent to get my 1910 Incubator and Brooder Book. I am sure it costs me many times as much to furnish the book and pay postage on it. I wrote this book myself and I took plenty of time and space to do it and make it interesting. You are mighty welcome to it whether you want an incubator now or next month or next year. Let me urge you to see this Free Book before you buy. I think we can "trade" to mutual advantage. If we can't, you are not out anything.

If you have no postal handy, fill out this coupon and mail it some time to-day. I'll be sure to rush the "QUEEN" Book to you, and you will spend many pleasant hours reading what I say and what many of those who are using "QUEENS" say. Plenty of illustrations and chicken talk to liven it up! My handy Poultry Record Book can be had, too, for the asking, and Coupon brings both.

PHILO NATIONAL POULTRY INSTITUTE

LEARN TO MAKE POULTRY PAY

We teach poultry keeping in all its branches by mail, or by demonstration at the greatest Poultry Institute in the world.

PHILO SYSTEM

Fresh laid eggs are considered the most perfect food and any one can learn to produce them at a profit. With the improved methods taught in our schools

PHILO INSTITUTE BUILDING

A Successful Business and Good Living

may be had on a city lot or small plot of ground in the suburbs or in the country. Poultry keeping is really a science. To get the greatest returns all branches of the work must be thoroughly understood. A short course is all that is necessary to make the business a success and to avoid the mistakes so common with those who do not understand the work.

We Can Teach You Scientific Poultry Keeping

by mail or at our National Poultry Institute, where thousands of the finest birds are raised annually. With the improved methods it is possible to handle the business with a very small capital, or students can get employment at good salaries.

Write for full information about our course of instruction in methods of poultry keeping.

PRESIDENT NAT'L S. C. RED CLUB -:- FORT WAYNE, INDIANA

THE GREAT VERDICT

Read carefully these opinions as expressed by ten of the foremost authorities in charge of Poultry Instruction at the largest Agricultural Colleges and Experiment Stations in the United States and Canada.

W. A. BROWN, Professor of Poultry Husbandry at University of Maine, College of Agriculture, Orono, Maine, says:—

I consider Farm-Poultry one of the best poultry magazines published. It is true that it has not been considered as optimistic as some others, yet I think we like it all the better on that account. Some papers make too high an estimate of the profits and pleasure to be obtained in the poultry business. Farm-Poultry holds us back to the level, and as you say, I think it needs papers of both kinds to tend to ultimate success.

C. K. GRAHAM, Director of The Hampton Normal and Agricultural Institute, Hampton, Va., says:—

It is a pleasure to me to say that I enjoy reading Farm-Poultry. I believe it has done as much good for the poultrymen of America as any paper published. To be sure its articles are not always optimistic, but they are inspired, I believe, by an editor who is trying to give his readers honest information regarding the poultry industry, and it has been, during the past five years, a pleasure to me to recommend your paper to inquirers.

D. J. LAMBERT, Professor of Poultry Culture at R. I. State College, Kingston, R. I., says:—

Permit me to say that I never hesitate to recommend Farm-Poultry to any one inquiring about poultry papers. I have long admired your editorial policy, and believe that you present facts as you see them, without fear or favor. Of course we appreciate every good word you say for the Agricultural Schools, and think that you recognize the poultry schools as one of the trio of forces that is helping to increase the welfare of this industry. The poultry press and the shows the other two.

O. W. DYNES, Professor of Poultry Husbandry at North Dakota Agricultural College, Agricultural College, North Dakota, says:—

Farm-Poultry has been coming to my desk for years, and although a western man, with a western view point, the general policy of your paper seems eminently sane and practical. Possibly because I am an experiment station man your editorial utterances appear at times to be unduly critical and caustic, but on the other hand it is distinctly noticeable that no poultry paper is quicker to endorse a good piece of investigational work than Farm-Poultry. No one will impugn the honesty of its policy, and it has been quick to discern the good and bad in poultry methods and practices. That sort of progressiveness will always win.

JAS. DRYDEN, Professor of Poultry Husbandry at Oregon Agricultural College and Experiment Station, Corvallis, Oregon, says:—

I am pleased to say that I read Farm-Poultry regularly and with considerable satisfaction. I believe your paper has done a great deal for the poultry industry along its practical side. It is certainly frank and fearless in its utterances; this is probably well in this day and age of the industry. I believe we are making rapid progress in the work of developing the poultry industry; it may not seem so at times in this impatient age, but the historian of the future will say that really wonderful things have been accomplished. We may not always agree. That we cannot expect in the present state of our knowledge of poultry keeping, but if we honestly disagree there will be rapid progress. There is a tremendously big field for a poultry paper with the policy that seems to guide Farm-Poultry, and I trust you are meeting with a generous response to your efforts.

W. R. GRAHAM, Professor of Poultry Husbandry at Ontario Agricultural College, Guelph, Canada, says:—

Your paper is more carefully read than any other poultry publication that comes to this office. I mean by this that it is not only read carefully by myself but by all our students as well. I do not know that we can say more for the reliability of the information given in your paper.

J. G. HALPIN, Professor of Poultry Husbandry at Michigan Experiment Station, East Lansing, Michigan, says:—

I have been very much pleased with Farm-Poultry during the last year, and I believe that Farm-Poultry should be placed among the list of the very best poultry magazines published in America today. I always place Farm-Poultry on the list of magazines that I recommend to farmers about the state, and others desiring information about poultry publications.

H. C. PEIRCE, Professor of Poultry Culture at Iowa State College, Ames, Iowa, says:—

It always gives me pleasure to say a good word for Farm-Poultry. Its articles are instructive and essentially practical, the only criticism being that there are not enough of them. In his editorials, Mr. Robinson is fearless and non-partisan, and he has that rare faculty of saying things so clearly and concisely that his opinion lingers long in the memory of the reader. The poultry industry is indeed fortunate in having such a mind as Mr. Robinson's devoted to its interests.

HORACE ATWOOD, Professor of Poultry Culture at West Virginia Agricultural Experiment Station, Morgantown, Va., says:—

I take pleasure in saying that in my judgment Farm-Poultry is one of the most valuable poultry papers of the country. Poultry publications of this class have a wide sphere of usefulness, for there is no other agency through which a poultryman can keep in touch so easily and so completely with improved methods and developments. I have the highest regard for your publication, and this brings to mind that my subscription has expired and I herewith enclose P. O. order for renewal.

JAS. E. RICE, Professor of Poultry Husbandry at New York State College of Agriculture, at Cornell University, Ithaca, N. Y., says:—

Farm-Poultry is one of our strongest poultry publications. I like it particularly because it has opinions which are frankly and fearlessly expressed. My respect for the paper is not lessened because I may sometimes disagree with the opinions of the editor. It makes us think and grow to have people differ with us, and we always respect opinions when they are honestly expressed. Farm-Poultry has taken advanced ground in favor of education and experimentation in Poultry Husbandry at the Agricultural Colleges and Experiment Stations, and devotes considerable space to presenting the most recent and best information available from these sources. This I believe, is more and more appreciated by readers as the work of the stations become more and more reliable and practical. I am glad of the opportunity to express my appreciation for the good work which Farm-Poultry, together with a number of other Agricultural Journals, are doing to advance the profession of Poultry Husbandry in dignity and importance. This is being done by showing up both the weak points and the strong points. What we want is the bare truth. Modern Poultry Husbandry will stand the search light.

These opinions constitute the most important verdict ever passed by competent judges on the merits of a poultry paper, and they prove conclusively that **Farm-Poultry** possesses, in the greatest degree, the respect, confidence, and approval of the highest authorities, as a practical, thoroughly reliable and fearlessly edited poultry publication. **Farm-Poultry** was established in 1889, is issued on the first of every month, and subscription price is 50 cents per year. Sample copy free.

Crescent Poultry Farm, Frank Foy, Prop., Des Moines, Iowa

Foy's Big Book---Money in Poultry and Squabs

Describes and illustrates all the leading varieties of pure bred fowls and Homer Pigeons for squab raising. ¶ Tells you all about how to raise poultry for profit, how to feed and mate, all about diseases and remedies and a great mass of useful information. ¶ Gives plans for building poultry houses, describes and illustrates the best incubators and brooders and the famous Crescent Poultry Farm, which is the largest poultry farm in this country devoted exclusively to the rearing of pure bred poultry and pigeons. ¶ IMPORTANT ADVICE—Tells you how to start the business in a small way and grow big. My specialties are thoroughbred fowls of a high quality, and Homer Pigeons for raising squabs. ¶ I can supply eggs for hatching from all leading varieties by the single setting or in large lots for incubators. My prices are low. The quality is high. All who want to keep posted in the poultry business, or contemplate purchasing anything in the above line, should send for this book. Mailed to any address for 4c in stamps. Write your wants; mention A. F. J.

WOODS' S. C. BROWN LEGHORNS

Won more first prizes at Missouri State Show, 1908, than all competitors combined. Cockerels and pullets for sale that will hold their own in the fastest company. Tom H. Woods, R. 4, Fayette, Mo.

Wyckoff's S. C. White Leghorns

Acknowledged everywhere the World's Greatest Laying Strain. Unequalled in standard qualities. Remember that we are the originators, and for more than 30 years specialty breeders of the justly celebrated Wyckoff Strain of S. C. W. Leghorns, the most profitable strain of poultry in America today. Place your orders at headquarters and make no mistake. 2,000 choice yearling hens, fine strong early cockerels and a few yearling cocks; must be sold at once to make room, and prices will be made especially attractive to early buyers. Send for catalogue and state wants as near as possible. Address

WYCKOFF'S FARM - AURORA, Cayuga Co., N. Y.

Quality Barred Plymouth Rocks

Simpson's Barred Plymouth Rocks have again shown their quality by winning at the great Chicago show first and second cock, first and third hen, fifth cockerel, third pen, and specials for best four cocks, best four hens and best four pullets. They always win wherever shown. If you want quality write me. I have some grand birds for sale. Am booking orders for eggs from pens containing my prize winners at \$10.00 per setting. Write for circular and mention American Poultry Journal.

EDGAR G. SIMPSON : : : : : NAPERVILLE, ILLINOIS

Coulter's Quality Reds

Rose Comb exclusively. Winnings at Cincinnati, December, 1909: 2d cockerel, 5th pullet, 2d, 3d and 4th hens. At great Chicago show, 1st pullet. Large blue grass breeding pens. Young stock have free range of 150-acre farm. Stock bred from 200-egg dams. Price of eggs, \$5.00, \$4.00, \$3.00, \$2.00 and \$1.50 per set.

Chas. C. Coulter, Prop., Maywood Farm, Frankfort, Indiana

RICKEY'S S. C. W. LEGHORNS

Remarkable winning at the great St. Louis show, 1909, again proves their supremacy. In a class of 223 S. C. White Leghorns, including a 1908 Madison Square winner, we won first cock, first pen, second pullet and second hen, a winning equalled by no other exhibitor of this variety. Write for prices of stock and eggs.

Chas. H. Rickey, Box A, Clarence, Missouri

American Standard of Perfection

LATEST EDITION

No poultryman can breed fowls intelligently without this book. It tells you what the different varieties of fowls must be to conform to the regulations of the American Poultry Association. This book is the guide by which all poultry judging is done.

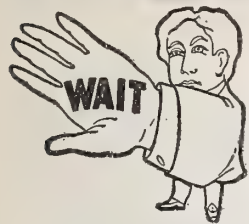

It contains ideal drawings of the different varieties of fowls, gives the Standard weights, colors, markings, etc. In fact, is the poultryman's encyclopedia.

Order one today and learn to your own satisfaction if your fowls are up to Standard requirements.

Exhibition Coops Now Ready!

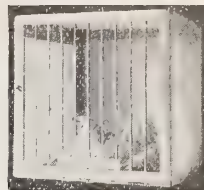

DON'T ORDER UNTIL YOU SEE OUR CATALOGUE unless you are in a hurry and want to order direct from this ad. Prices—Single size, \$1.00 each; \$5.50 per half dozen; \$10.00 per dozen. Pen size, \$2.00 each; two for \$3.50; six for \$9.00. Stained mahogany. **FREE with each order of one dozen single coops**, we will send one pen coop, or for \$6.50 we will ship half dozen single and one pen coops. Coops are all standard size as called for in the American Standard of Perfection. Coops of any other size are apt to be set in the back row at many poultry shows. The door slides all the way up so as to allow the judge or exhibitor to take the bird out without breaking the feathers. This means **POINTS** in scoring. Our coops are made strong, can be shipped from show to show in perfect safety, can be easily set together and taken apart as easily for storing.

We furnish everything, canvas, tacks and nails. **Don't forget that we make the best trap nest in the world**, besides other poultry house fixtures. We also make a special eight-section coop that is just the thing for poultry associations. Send for our catalogue, it's free. Secretaries correspond with us.

Saginaw, Michigan, U. S. A.

Burhans' "Quality" Exhibition Barred Plymouth Rocks

Champions of the Northwest Captured the lion's share of honors and the glory for the strongest exhibit ever made in the Twin Cities. See former ad for winnings. I am now offering a few crack exhibition cockerels and pullets bred the same as they, with a few yearling hens cockerel bred. These are the sort of cockerels that impress their likeness on their chicks. Large size, red eyes, yellow legs and beaks, shapely and smooth in finish, barred to the skin and clean cut and bright on the surface. They will please. Priced low for the quality. Wings and tails barred right. Come early as they are few but selected. Eggs, coming season at five, ten, fifteen, twenty-five and forty-five dollars per setting. Are they worth the money? Ask my customers.

Amos Burhans Box A Waterville, Minnesota

Rose Comb Rhode Island Reds

We only have the one kind. Our stock is as good as the best. Winnings at Tennessee State Fair, September, 1909: first hen, second pullet, second cock, fifth cockerel and second pen. At Tri-State Fair at Memphis, first and third cock, first and second hen, second cockerel and second pen. Eggs in season. \$1.00 to \$5.00 per 15. :: :: :: ::

McMinnville Poultry Ranch :: McMinnville, Tennessee

Coleman's Eureka Tonic and Roup Tablets

The greatest discovery of the age in the poultry remedy line. These tablets are positively guaranteed to cure **roup and colds**, will build up the fowl's system, guaranteed to prevent the loss of birds due to the exposure and disease contracted in the show room, will put the fowls in the finest possible condition for exhibition. No matter what the disease Eureka Tablets will save your birds.

Don't take our word for it, but read the following unsolicited testimonials from the greatest authorities in the country:

Loring Brown, eminent poultry judge and manager of Belmont Farm, Smyrna, Ga., the South's largest poultry farm, writes: "Please send the tablets by return mail. I have lost no less than \$200.00 worth of birds by not having your valuable remedy."

Dr. S. R. Harrison, Shelby, Ohio, writes: "Your tablets have saved birds for me that were more than half dead. I cannot find words to speak too highly of this wonderful remedy."

T. N. Davis, Wholesale Grocer, Topeka, Kansas, writes: "I have tried about all Roup cures but I find that none of them are of much force but yours, and it is a truly ROUP CURE, so please find enclosed one dollar (\$1.00) for which send me five (5) boxes of your tablets at once."

H. B. Hark, manager of the Hartman Stock Farm Poultry Yards, Columbus, Ohio, the world's largest poultry farm, writes: "They are the very best thing I have ever tried to put a bird that is out of condition into good shape quick. At the Kentucky State Fair a friend came to me with a cockerel that was all in, could not hold up his head. I gave him two of your pink pills. The next morning he stood up like a fighting cock and took one of the first prizes."

What more proofs of the wonderful power of this remedy could be asked for?

Write today. A liberal sample box will be sent for stamp, or better still, send 25 cents for a full size box containing 65 tablets, postpaid, or 5 boxes for \$1.00. Please mention American Poultry Journal when writing.

Our New Poultry Book

ORIGIN AND HISTORY OF ALL BREEDS OF POULTRY

This Book Gives a Complete History and the Origin of all the Recognized Varieties of Chickens, Ducks, Geese and Turkeys, and is

Illustrated With 198 Colored Pictures of Fowls Painted From Life

SOMETHING NEVER BEFORE ATTEMPTED BY ANY PUBLISHER

This is, without question, the greatest book ever published on poultry. The artist's work alone on this book took almost one year's time to complete, but it shows the fowls in their natural colors and correct shape, and these colored pictures, together with the history of each variety, gives the fancier all the information to produce fowls for either exhibition or breeding.

How to Mate

This book also tells how to properly mate the different varieties of fowls to produce birds that will conform to Standard requirements. This is something that even the Standard of Perfection does not do. It tells you at a glance what it will take years of practical experience to learn. It is a book that no breeder or fancier can afford to be without, as it is just as suitable for the needs of the experienced fancier as for the amateur.

DOES POULTRY ADVERTISING PAY?

Methods Pursued by One Who Has Made a Success—Time and Persistent Efforts Will Bring Results—Grotesque or "Funny" Advertisements Are Not What the Buyer is Looking For

Written for American Poultry Journal by F. A. Tecktonius, Racine, Wis.

ADVERTISING of a poultry farm cannot be made to pay successfully unless you first have stock that, in a sense, largely advertises itself. Then your advertising, through the mail, and in the poultry "class" papers, acts as a valuable supplementary force. Each assists the other and, properly combined, they yield good returns.

This is, of course, no new theory. It applies very generally, I think nearly every successfully advertised article has merit, or it would not be a success—at least not for any very great period. The old saw still stands: "You can't fool all the people all the time."

When I first began the breeding of Single Comb Buff Leghorns I did no advertising—for then, of course, I had nothing to advertise. But later, when I did have stock that I might have sold through advertising, I knew better than to try to do so. I was still developing and perfecting my breed, and I had not reached a point where I could consistently say very much in an advertisement. It was not until my birds had taken a number of first prizes at the big shows that I really began systematic advertising.

Now, looking back over the past two years, I feel well satisfied that my policy was a good one. Today, I am in position to not only fulfill every promise made in my advertising, but also to do more. I can guarantee that my statements are true—that purchases will be satisfactory—and a very cursory investigation upon the part of the public will prove that my guarantee is good.

I state these facts here, not for the sake of self-praise, but merely to emphasize my point that poultry farm advertising is not practicable unless conditions are as good or better than they were with me when I first commenced advertising. But, conditions being right—and the advertising properly written, properly placed, and properly followed up—that advertising will pay, and pay well.

The advertising mediums used by me have been carefully tested, and although it cost me something at first to experiment, I am now pretty well assured in advance that those carrying my "copy" will eventually bring back every dollar spent with them—and much more besides. I have revised my list repeatedly—added to it new publications, and dropped others, as my judgment (based on results) dictated—until I feel satisfied that I am now using the pick of the poultry papers, for my proposition. However, when I say "based on results" I do not mean the results of one advertisement. Hardly any proposition advertised ever pays "right from the jump." Advertising did not begin to "pay out" for me until I had a pretty respectable sum invested in it. None of the publications used ever paid me until I had been running my ad. in them for several months—and now I know from actual experience (not hearsay) that the effects of advertising are cumulative—that they keep on piling up, like a rolling snowball; but in order to make them "pile up," the ball must be kept rolling. Thus I have found that in my business, at least, the policy of spasmodic advertising is a decidedly poor one.

I use poultry journals for my advertising almost exclusively. I know that there are quite a number of papers of

"general" or national circulation, that carry some poultry advertising, but I have not tried them out to any extent, as yet, and so cannot give an authoritative opinion as to their merits. I only know that, in my experience, the good, high class, long established poultry journals are the "pullers."

In the preparation of advertising "copy," remember to be brief, and very much to the point. A good advertisement must perform three functions: it must catch the eye; it must arouse interest and desire; and it must compel action—either inquiry or purchase—but, ultimately, purchase. Your advertisement must do these things, in greater or lesser degree, or it is no advertisement at all—only an announcement, or "business card."

In my advertising, I am now using a little triangular "cut" of a true-to-shape Buff Leghorn, with the word "Tecktonius" which I have adopted as a sort of trade-mark, and also because it is unusual enough in appearance to readily catch the eye of a person glancing through the pages of the publication. Then I endeavor to write my advertising "copy" so that it will be interesting reading, and will create on the part of the reader a desire to order either a setting of eggs or a pen of birds—or at least know more about them.

A word of caution here: Never try to be "funny," or to write a grotesque advertisement. Such things may "catch the eye," but they do nothing else, and cannot be expected to. Because you are (or may think you are) witty, is no sign that you know how to raise chickens successfully. Wit and salesmanship do not combine well—in an advertisement.

After an inquiry is received, follow the policy of giving the prospective purchaser just as much information as possible about your methods of breeding, feeding, mating, etc., even before being assured of his business. Merely saying that your birds are "fine ones," etc., doesn't make much of an impression. Show why they are so—how you made them what they are—and how you keep them up to the mark at all times. To do this has an additional good effect, entirely outside of giving the "prospective" the information desired. It conveys the impression that you are open and above-board in your general business methods—that you hold no secrets from anyone—and the natural inference will be that you employ a similar policy in all your individual dealings.

Lastly—I endeavor to give satisfaction to every purchaser, at any cost. Doing this gives one that free, word-of-mouth, direct advertising that beats every other medium on earth for actual cash results.

The price of eggs on the Chicago market has been going up steadily for the past three weeks. Who says there is no money in the poultry business with eggs at 45 to 50 cents per dozen; chickens, 15 to 20 cents per pound, and turkeys, 28 to 30 cents per pound? Put your money in the poultry business. It is a good investment.

The mammoth incubator manufacturers are doing a rushing business these days. The demand for poultry products far exceeds the supply, and the shrewd men recognizing the possibilities in the poultry industry are equipping their plants with these large machines so as to be able to keep up with the growing demand.

There is no line of business today that offers as good opportunities for the investor as the poultry business.

The supply of choice breeding birds is short and those who have them are getting the prices.

WHO'S WHO IN HENDOM

I LOVE my native heather, but oh, you O-hi-o!

Sure, we are going to stray back east for Who's Who material this month, but on the way we ran square into a chicken state that has done something chickenwise, so here we rest for a moment or two before going further. If Tom McGrew could but put the words of eloquence in my mouth—I mean in my typewriter—then would I feel sure I could do the state justice. But my eyes are grown dim with the years of time and my pen lost its cunning in fishing beauties from the ink pot, so the dear fanciers of that little but big state will have to forgive the mental minus with which I set me down to picture its glories.

Given a spread at the banquet board that is fitting for the gods, a flow of soul as is only found among good Ohioans on such occasions, the perfect assimilation of Tom McGrew and about 180 pounds of pressure, and the chances are that Tom would rise in oratorical flights of vocabularic splendor and make the real home run of the evening. I, instead, get out my blue book of all chickenists, thumb the pages over till I find Ohio, then fish among the weeds and lily pads for a few strikes that will bring the state to mind in a manner befitting the best there is in me.

Ohio is a great state. In chickendom she is a classic. There are no more at home like her. There she sits in the bright light of day, preening herself. When you are discouraged and want to join the down-and-outers, just take the map of the state in the left hand and a pencil in the right, sluff yourself over the dining table and look for the towns that have been placed thereon by the fanciers who have humbled themselves by residing there. Why, man, there's many a town in the state where the trains didn't stop before some good, live chicken fellows appealed to the railroad management!

Right? I know I'm right.

Ohio is great in the number of its candidates for national offices, from the big chair in Washington to the big seat in the A. P. A. She holds out as many shows as the next state, and more of them than three-fourths of the states. She is bounded on the north by Cleveland and Toledo, on the east by Akron and Canton, on the south by Cincinnati and a few remaining Kentucky fueds, on the wild and woolly west by Lima and Dayton, all these revolving about Columbus. If these boundaries do not suit you, get that one given by the sage of Mansfield, S. Theo. Campbell; he is disinterested and will treat all alike.

When folks want to do a thing, firstly, they go to Ohio and there see how Ohio does it. She is always at the front of the firing line. The chicken institutions that are housed within the state are many and great. There are large and small, wide and narrow, high and low, farms, plants and village acres. On all the farms of the state there is nothing but pure bred fowls. If there is a breed that needs a friend it goes to Ohio to get it. If it needs more friends, they go to Ohio again.

Ohio contains more chicken men to the square foot than any state with four corners, and the numbers of her poultry judges is something fierce, there being about four or five to every township. Of course, you can take all of this you like. It stands out here on the counter to be advertised and you may as well load your pockets as not. We are glad to get rid of it. And then just look at the prizes the state won when she went down to St. Louis to the world's fair and ate 'em up! Heavens!

They do not have to tell what they have done, either, down there in O-hi-o. They are doing things every day in the year. The music of the lark and the whistle of the curlew as it sails over the meadow have no soothing sounds for the ears of the chickenist Ohioan; what he wants is prizes, prizes, prizes, by the basketful, wagonload, trainload. Look

at what the River Home Farms have been doing. Why, man, they went out to the shows the past few seasons and used a van to get their prize money and silver and gold plate home, as they wended their way back to the state; while the merry bluebirds mated on the bough of the apple tree and the vagrant winds wafted odors of delicious blossoms across the fields where the bees buzzed as they bumbled busily, and from the dell came the gentle tinkle of the bell on the neck of Deacon Mossback's favorite Ayrshire heifer.

Step down to Bascom, Ohio, and look over those first prize pens of Buff Orps. that Strubble showed down at the Garden the last couple of years. Don't they

make your pocketbook water?

When it comes to Reds, go to Ohio to find them! Simmons and Crittenden, over there in Geneva, are producing some good ones. Orpingtons are given a lot of yard room in Ohio. Over there at Piqua we find a lot of good ones in the yards of J. Frank Mahan. Dillon & Bell, Cincinnati, also breed Buffs, with some Wyandottes and Reds. Defiance is represented by Albert Anderson and his S. C. W. Leghorns and Barred Rocks.

Clark and Pike, Willoughby, are producing some good White Rocks and doing some winning at Cleveland and other good shows. G. W. Bachman, North Baltimore, is breeding some good Barred Rocks. Canfield and King, Painesville, are winning silver cups and diplomas and cash specials with their Columbian 'Dottes. Willoughby also comes in for the Covert Barred Rock Farm, where they are doing some good business in Rocks and winning at the best shows.

When it comes to baby chicks, they are right there with the pudding in Ohio. Uhl & Co., New Washington, was the first, I believe, in the state. They have been sending chicks all over the world. R. C. Caldwell has also done a lot of hatching and ships White Rock chicks from his mammoth incubators the country over.

Roseland Farm, South Euclid, is another farm given over to the growing of Buff Orpingtons. H. Burkholder, Clyde, is one of the thousand and more Barred Rock men who are doing things in Ohio with this grand old breed. A. G. Clark, again hailing from Willoughby, is breeding practical Reds. Most Reds are practical birds, so all breeders of Reds make the claim, but Mr. Clark says his are way above the average.

H. H. Knapp, Tiro, is one of the day-old chick shippers, and breeds them from his best White Wyandottes. Barber-ton is one of the little towns that the chicken business in the state has helped to place on the map, and C. L. Patterson, with his Columbians, has helped to keep it there. George F. Buck and Sylvester Shirley hail from Port Clinton, and their stock is second to none. A. J. Laudon, Elyria, breeds all the Rock family and still has room for producing a few good Reds. F. M. Clemans, Mechanicsburg, fancies Columbian Rocks and Black Wyandottes. This is a queer combination, but it produces results. The two Sixts are breeding good enough birds to win at Detroit and Cleveland, and this in the hard varieties of White Wyandottes and Leghorns. F. E. Wilson, College Hill, is a Rose Comb Red breeder whom nothing but the best satisfies.

Tannenbaum Farms, Willoughby, breeders of the best there is in Columbians and Barred Rocks, have a superb layout to work with and are always in the money in the show room. They are good folk to tie up with. Thorniley's Anconas, Marietta, are the standard of their section. Buff Wyandottes are the hobby of T. K. Martin, who lives in Chicago—not Illinois, but Ohio. George Barkdoll, White Wyandotte specialist, calls West Unity, Ohio, his home, and his birds have found niches in such shows as Toledo and Indianapolis.

Ira C. Keller, Prospect, has been one of the state's best advertisers "ever since Heck was a pup," and there is no outlook more pleasing than that of Brookside Farm. When

"THE BEST IN THE WORLD"

WHITE PL. ROCKS

BRED & OWNED BY

W. R. FISHEL, HOPE, IND.

he goes out to the shows he wins. And if you were to read over his catalogue you would see that they go into the quality shows.

And did you ever think of Ohio without thinking of Charley McClave? Well, we guess not! He is the waterfowl king, big K. Charley is one of the old-timers and knows all about chickens. He breeds about forty varieties and none of the beginners go to him without his telling them all they ask of him and then he gives them an idea of what more he knows that will do them any good.

McNary & Smith, Bannock, is a firm that is doing business in a big way with Rose Comb Reds. They hatch them and grow them by the thousands. And I might go on indefinitely telling of hundreds of others, including G. B. Smith & Son, S. M. Dickenson, L. E. Simmons, McFerren, Maple Glen Yards, O. E. Michael, Oscar Holtzapple, F. S. Hawn, Homer Slagle, W. T. Carroll, Andy Smith, J. E. Graham, B. M. Billings and A. J. Thuneman.

The Ohio boys are all bent on having state aid for their state show, and well they deserve it. They are working to make the state experimental station poultry plant one of the best in the country. They realize that all this takes time and money and know that money is hard to wring from

Photo from life of a "Ringlet" exhibition pullet, bred by King Brothers, Oshkosh, Wis.

the state legislature. They know that even with the great place that the state holds in the fancy, it takes work to get it up still higher. They are giving annual instruction in poultry husbandry at the agricultural college, but know that they need more equipment and instructions, and so they are going after their lawmakers hard, striving to get what the industry in their state demands.

I might go along the way saying a lot more things about the state of Ohio. But there is not the room, nor does the state need them to spur her on in her work. I admit that my articles are worth the money, but when I take up the papers and note that Peary got \$50,000 for his story of the discovery of the Big Nail, it makes me weary—and having made this confession, I will now go out and pull a few stubbs from the legs of my crack show birds and see if there is some way that I can fake the color of the lobes. I suppose that sooner or later the A. P. A. will get my hide and hang it in the spotlight of publicity, but who cares? The cup is full, and what it will not hold must slop over.

Fare thee well, Leonora, fare thee well.

P. S.—I'll be back next month.

POSSIBILITIES OF THE POULTRY BUSINESS

What We Can Reasonably Expect—The Cost of Feed, and the Average Yearly Egg Yield—A Summary of Results Attained, With Profit Assured—Eggs as Food, Etc.

Written by H. P. Schwab, Eastern Representative A. P. J. Condequoit, N. Y.

Part Two.

THAT which we may reasonably expect from the poultry business is well shown in the summary of figures given below. In the collection of these we have been careful to only use those that appear reasonable to us, as well as those from parties whose reputation and success are well known. It is our one aim to only give facts, and if we are in error in any way, we stand ready to be shown. We have every reason to believe the figures given are reliable and that they only show the average of profit that can be obtained from poultry in most any section.

As will be shown, these figures bear out all our claims of profit in poultry fully. We have compiled these totals and consider prices that deal with the practical side of the question only, using every care to consider only the market value of stock and eggs to the consumer. The fancy side of this question will be left for future parts and consideration.

Feed Cost Per Hen Per Year.

For nearly the entire past year the price of feed has been very high; higher in fact than we have ever known it to be. With this in view, we were fully prepared for all estimates that came in reply to our requests. We received twelve replies, and in these the yearly feed cost per hen is given at from 65 cents to \$1.20. The average of the twelve gives us the cost at just \$1.03 per head. The lowest estimate we have, viz., 65 cents, comes from one of our greatest plants, where food is bought in carload lots and where the question of feeding is carried out on strictly scientific lines. Considering this, we have no right to question these figures. I believe them correct, but in this case, where the average flock is under consideration, and where the food is bought in small lots, these figures would be very low. The high price given, viz., \$1.20 per head, comes from those with rather small flocks, those from 50 or 75 to 159, that are located east and away from the grain producing farms. Most of the estimates ran from 90 cents to \$1.10, and from all these the average of \$1.03 was had, which, as before stated, seems to be about right to us, for we have found that we can feed for that amount the regular ration that warrants best results.

The Laying Capacity of Breeds.

We have and know of many exceptional layers; each flock has its share of these, as well as its share of females that will not lay over 100 per year. Hens that have laid from 200 to 240 eggs per year belong to the select class of hendom. If the breeder was to trap-nest his layers and select his best layers of this kind, then the average we give here could be greatly increased. We consider these figures of no value in this article, much as we would like to incorporate them. In this it is a simple question of what a flock of from 100 to 1,000 laying hens can accomplish under fair to good conditions.

We have direct information for this article from twelve breeders of Barred and White Plymouth Rocks, Light Brahmas, White and Silver Wyandottes, S. and R. C. Black Minorcas, S. C. White and Brown Leghorns and Buff Orpingtons. While the size of these flocks varies from about 100 to over 1,000 each, the flock average is given in each case, and I find the average is 162 eggs per head per year. This to us appears to be a very conservative estimate for these birds, that are all in competent hands. We personally know of several large flocks that hug the 200 mark closely, but we consider these exceptional cases, while an average of 162 under ordinary conditions looks just about right. This average is taken from figures that ran from 146 to 189, and we have reasons to believe that this best estimate is the result of better conditions and proper feeding only. We would further state that both this low and high estimate is from flocks of Barred Plymouth Rocks.

Along with the reports received we have several from experimental stations that have been compared, and we find that as a rule our figures are quite a little more conservative. This can be accounted for best in the care of housing and feeding used on the government and state farms, and it is right here where the poultryman can learn with

profit, if he will but keep posted and up to the times. We may safely take it for granted that by expert handling and feeding it would not be a difficult job to breed a flock of any of the popular breeds that now average from 140 to 160 eggs per year up to an increase of fully one-quarter more.

The Cost of Egg Production.

In addition to the above we wish to add that some very interesting experiments have been made to determine the cost of egg production. In these only the cost of food was considered, and no mention is made of interest on investment, labor, etc., therefore the results show only feed cost of eggs produced. Mr. Miller Purvis, in *The Poultry Book*, page 100, says: "The writer kept a careful account of a flock of S. C. Brown Leghorns for one year and found the feed cost of eggs produced by this flock was exactly 5.25 cents per dozen." We would add to this that we know of no better authority than Mr. Purvis.

In a prize competition made under the auspices of the Ohio Farmer, Mr. Purvis was selected to award the prizes. Seventy-two flocks were in competition, and this lasted from May 1 to November 1. The cost of the eggs produced by

estimate we have fully considered the usual price and the difference of production in winter and summer.

To sum up the totals, we find that a hen or a flock that will average 162 eggs per year, their product is worth just \$2.97; the cost of feeding is \$1.03. Now, deducting 25 per cent for labor, housing, repairs, etc., we have a clean net profit of \$1.23 per year per head. If there is any other business that will, with the same investment and running cost, approach these returns then we haven't heard of it. They are superior to Standard Oil or Kodak stocks.

Well as these figures show, we can still say they are not the limit to be obtained. Location here figures prominently in the returns, as do the amount of stock kept and its handling. If you are located anywhere within 500 miles of the great business centers, then these figures can be increased as has been shown, by better than 25 per cent, and at the same time, with all under consideration, we can't see how they can be reduced from the totals above given.

The First Cost.

In starting in the poultry business the first cost is but a trifle when compared to future advantages and results. We have always held that the best is none too good to start

Tenant house on "Old Homestead Farms," J. H. McDanell, Warsaw, Ky., prop. This plant is now greatly enlarged to meet the demand for his famous Golden and Columbian Wyandottes. Send for handsome catalogue.

these flocks during the period of the tests was almost exactly 6 cents a dozen.

The Canadian Department of Agriculture asked of a large number of poultry breeders the cost of eggs to them, and the replies indicated that between 5 and 6 cents a dozen was the average feed cost to them in the Dominion of Canada.

From December 1, 1901 to March 29, 1902, a period of seventeen weeks, the New York experiment station at Ithaca conducted an experiment in which ten of the best known poultrymen of New York kept account with their flocks, each feeding in his own way. There were twelve flocks on the ten farms, ranging in numbers from 25 to 600, the aggregate being 2,133 hens. The average feed cost during this time was 16.3 cents. It should be remembered that this test was made during the most unfavorable time of the year.

Our own returns in regard to the prices received for eggs are not as complete as we wished them to be, and we are also aware that in the sections we have drawn our special information from the price of eggs varies greatly with the seasons. One party reports he receives 30 cents per dozen for six months of the year and 55 cents for the remaining six months. These are all shipped to a New York hotel, and we know of some others that are receiving still a better price than this. But to consider the price that is within the reach of all to obtain, we would have to fall back on our figures and give 22 cents as the lowest average. In this matter; we also have in view that this will bring the breeder

with. In our last we pointed out the value of the Standard breeds, and may again refer to them. We mention this here so that the reader will not lose sight of this most important into the fancy question, from which he will find that the returns will several times double the figures above given.

The Egg Value as Food.

The egg as a food to our purpose is a well balanced ration. In composition they closely resemble meat and milk, much more than they do any of the vegetables. From the chemical composition they are shown to belong to the same class as the other animal foods, and may take the place of them. Elaborate experiments, both in this country and Europe, have demonstrated that eggs are equally digestible with other foods of their class and that they are more thoroughly digested than other foods of similar composition. It is claimed that eggs at 25 cents per dozen are cheaper food than beef at 12 cents per pound.

Palatability has much to do with the value of foods, although why this is so is not well understood. Eggs are relished by almost everyone, old and young alike, while meats are rejected by a great many people.

We had hoped to complete this series with this part, No. 2, but we find there are still several more questions that crop up and that are really a part of this, so, on request, we will go further, if not in our next, on account of that being the big show number, then part three will follow at our first opportunity.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to B. Rabkin, Woodbine, N. J., and the second prize to Harry Lentz, Sharon, Pa.

HOW TO RAISE HEALTHY CHICKS.

WITH the approaching of winter months the work of incubation and brooding begins intensively, and it is timely to give some suggestions concerning that subject.

It is said, with right, that the future and success of the world lies in the hands of the young generation.

Paraphrasing, I will say, that the future and success of the poultry plant depends mainly on the young stock you raise.

If you are lucky to bring up a strong, healthy stock of chicks you may be sure that your poultry is built on a strong foundation, that you'll be successful, and the work in the poultry yard will be easy and pleasant.

Otherwise, when the chicks are weak and insufficiently developed, don't expect anything decent from your poultry. "Hard luck" will always accompany you.

But how to get strong and healthy chicks? There are four factors to be considered in raising strong chicks. They are:

- I. Parental stock.
- II. Incubation.
- III. Brooding.
- IV. Immediate care after brooding.

They are the four corner stones on which the success of poultry is based. Their importance is, to my mind, in the order mentioned.

I. Parental stock.

Strong healthy chicks you can expect only from strong and healthy hens. The fundamental condition of a successful hatch and brood is the high fertility of the eggs. No matter how much care you'll give to hatching and brooding as long as the embryos of the egg are of low vitality the result of your work will be nothing, or nearly nothing.

In order to procure eggs of high fertility the following requirements toward the breeding stock must be observed:

1. Don't use eggs for incubators which are collected from your flock indiscriminately. Pick out the best, healthiest hens, keep them separate from the others and give them your special attention.
2. Keep the breeding pen absolutely free from lice and mites. Whitewash the pen frequently and dust the hens with lice powder.
3. Feed them with good, nourishing food. Also supply them in abundance with green stuff.
4. Induce them to take much exercise. Feed them grain in litter eight to ten inches deep.
5. Don't let too many cocks run with the hens. One cock is enough for eight or ten hens. The best system is to have one cock run with the hens one day and another cock the next day.
6. The best age of a hen for breeding is from 1 to 2½ years old.
7. As soon as a hen shows a sign of ill disposition remove her from the breeding pen.
8. The eggs must be fresh as possibly you can get. Every

day over a week old lowers the percentage of the hatch. Especially is this true in hot weather.

II. Incubation.

There are two ways of incubation, natural and artificial. For the artificial incubation we use an incubator. Before starting the incubator inspect and overhaul all the moveable parts of it. It pays always to disinfect the incubator before setting it up with some carbolic solution or kerosene. Then let the machine aerate for a day or so. Put together the machine and run it for a day or two without eggs. Never be in a hurry with putting in your eggs. While the incubator is running pick out the eggs and put them on the tray. Better when the eggs are of uniform size and color. When the temperature of the incubator is 101 degrees, not higher, and is constant, open the incubator and let the temperature go down to 90 degrees or lower, according to the temperature of the room. The reason for cooling the incubator is that the eggs by putting in should not suffer from a sudden change in temperature.

Put the eggs in the egg chamber and close the incubator. Don't open it until the fourth day, when you begin to turn the eggs. The first day turn very little, next day a little more, etc. The purpose for turning is to supply to the eggs fresh air and to prevent the germ from sticking to the shell. The eggs we turn until the end of the nineteenth day, when the incubator must not be opened until the end of the hatch.

The germ in the egg develops by supplying to the egg a certain degree of heat, air and moisture.

The temperature must read as follows:

By starting, about.....	90°
The first three days.....	101°
The next four to seven days, about.....	102°
The second week, not over.....	102°
The third week, until nineteenth or twentieth day.....	103°
From nineteenth until the end.....	104°

The moisture must be supplied as follows:

First to seventh day, extra moisture; seventh to twelfth, extra moisture when dry only; twelfth to fourteenth, little moisture; fourteenth to twentieth, no moisture; twentieth to twenty-first, extra moisture.

Ventilation:

First to third days, no ventilation; third to seventh, little ventilation; seventh to fourteenth, more ventilation; fourteenth to twenty-first, plenty of ventilation.

III. Brooding.

Soon as the eggs begin to peep start the brooder. It is very advisable to disinfect the brooder before starting. Spread over the floor of the brooder a paper, sprinkle some dry sand, on the top of which put about an inch thick of clover leaves, hay, chaff or cut alfalfa. It induces the chicks to scratch in.

Warm the brooder up to 100 degrees. Usually the chicks remain in incubator for a day. Then they are transferred to the brooder. Leave them for another day without food. On the next day begin to feed them.

The required temperature in the brooder is as follows: The first two days, 98 to 100 degrees; lower the temperature gradually, so that at the end of the first week it will be 95 degrees; at the end of the second week, 90 degrees; the third 85 degrees, etc.

The question of what to feed the young chicks is not a settled one. Different people have different opinions about feeding. What I want to say is that food is of a minor importance so long as the chicks are healthy and the temperature is right. The chicks will eat everything with advantage. There are some points, however, to be remembered: (1) Keep the chicks always hungry and ready to hunt for food; (2) the ration shall be rather wider than too narrow; (3) the food shall be rather dry than wet; (4) induce them to scratch, by putting in plenty of suitable litter; (5) provide them with grit, charcoal and oyster shell.

IV. Immediate care after brooding.

After the chicks are five or six weeks old they are out of danger. They are removed into colony houses. The care

for them is now much easier. But any neglect causes fatal results. Provide them with a dry, clean place to sleep, and shade on a hot day. Feed them with a more narrow ration. Make them grow as fast as possible. Rain is their worst enemy, and look out they should not get wet.

B. Rabkin.

Woodbine, N. J.

SUCCESS WITH CHICKENS DURING THE WINTER MONTHS.

IN ORDER to have success with the chickens during the winter months one should feed and house his fowls properly during the winter months. I advise that the house be built and arranged in order to give the fowls comfort and heat. The house should be, if possible, double walled in the cold climates and single walled with a layer of tarred paper in the moderate climates. A slant roof is preferred more than the gable roof, and should not be more than four to five feet in height at the rear end. This helps to reduce the amount of dead air space which the fowls must warm in

COLUMBIAN WYANDOTTES.

First cock, Chicago, 1903, and two winning pullets. Bred and owned by Fred Styers, Greensburg, Ind.

cold weather. The floor of the coop should be at least raised six inches above the surrounding land, so as to insure dryness. The floor should be made of cement or earth (gravel). The best perches are all on a level and not more than two or three feet above the floor. By having them level, the fowls do not fight and crowd for special positions, and by having them low they are more easily cleaned, and fowls that fall, jump or get pushed off will not be injured. The windows in the house should all face the south if possible in order to let the sun shine in. The house should be properly ventilated during the winter as well as all seasons of the year. Shafts and openings in the roof used to ventilate are more harmful than good as they let out the warm air and let in a downward current of cold air. Instead of having two glass windows in the south wall cover the one with cloth. This curtain permits a gentle diffusion of fresh pure air, but breaks up all drafts and cold currents. On pleasant, sunshiny days remove the cloth screen entirely and give the house a good sunning and airing.

Proper feeding during the winter months is another vital factor of success. In order to keep the fowl in health and laying condition, I advise the following method of feeding:

First, the house should have leaves or straw or any dry material as the like scattered on the floor to the depth of four to six inches. When the feed is given to the fowls it should be scattered about in the leaves or straw, whatever it might be. This makes the fowls scratch for their feed and keeps their muscles in trim and also provides them recreation and

Practical Reds at Ridge View Farm, Willoughby, Ohio.

entertainment and helps to keep them warm. Sand should also be scattered about on the floor as this is the only material the fowls obtain to digest their food.

The feeding of the fowls twice a day is all right in the warmer months, but the oftener they are fed in the winter months the better, as it keeps them moving around and prevents them from chilling.

Many poultrymen give their fowls the same dry grain the whole year around and they are thus dismayed that their fowls do not produce more. The ration of the grain should consist of one-half corn and one-fourth of oats and one-fourth wheat. By way of variety add occasionally another kind of grain such as millet seed, kaffir corn, buckwheat, sunflower seed, or beans and peas. Hot mash or scalded bran is also well liked by the fowls on cold mornings. In

Barred Plymouth Rock Cock, valued at \$200, bred and owned by F. R. Green, Lake City, Iowa. See ad on other page.

order to make the fowls lay, dried clover and meat scraps should be given them several times a week. The clover takes the place of grass and is rich in protein, and the meat also helps to make up the egg. If this method of feeding does not keep the fowl in good health and laying condition, nothing will.

FACTS, FANCIES AND SUPERSTITIONS

"House of Hen's Feathers"—Superstitions Regarding Cocks and Hens—The Laying of Eggs by Cocks—Trial and Execution of a Cock Bird

Written for American Poultry Journal by Rev. C. E. Petersen, Beidgton, Maine

THERE exists at Pekin, China, a lodging house which surpasses in eccentricity all that the fertile imagination of Fourier could have conceived.

It is called Ki-mao-fan, that is "House of Hen's Feathers." This marvelous establishment is simply composed of one great hall, the floor of which is covered over its whole extent with one vast, thick layer of feathers.

Mendicants and vagabonds who have no other domicile come to pass the night in this immense dormitory. Men, women and children, old and young, are admitted without exception.

Everyone settles himself and makes his nest as well as he can for the night in this ocean of feathers. When day dawns he must quit the premises, and an officer of the company

WHITE PLYMOUTH ROCK.

First prize cockerel at Chicago, 1908. This illustration was made from a photo without any retouching. Bred and owned by H. W. Halbach, Waterford, Wis.

stands at the door to receive the rent of one sapeck (one-fourth of a penny) each for the night's lodging.

In deference, no doubt, to the principle of equality, half places are not allowed, and a child must pay the same as a grown person.

On the first establishment of this eminently philanthropic institution, the managers of it furnished each of the guests with a covering, but it was found necessary to modify this regulation, for the communist company got into the habit of carrying off their coverlets to sell them or to supply an additional garment during the cold weather.

It was necessary, therefore, to devise some method of reconciling the interests of the establishment with the comfort of the guests, and the way in which the problem was solved was this:

An immense coverlet, of such gigantic dimensions as to cover the whole dormitory, was made, and in the daytime suspended from the ceiling like a great canopy.

When everybody had gone to bed—that is to say, had lain down upon the feathers—the counterpane was let down by pulleys, the precaution having been previously taken to make

a number of holes in it so the sleepers would escape the danger of suffocation. As soon as it is daylight the coverlet is hoisted up again, after a signal has been made on the tam-tam to awaken those who are asleep, so as not to be entangled on the coverlet. China is a land of wonders, but this seems too wonderful a story for belief, but it is vouched for

One of the brooder houses at Tannenbaum Farm, Willoughby, Ohio. Barred Rocks, Columbian Wyandottes.

on authority of Frank H. Stauffer in his book on peculiar customs.

Superstitions Regarding Cocks and Hens.

Schweinfurth, in his "Heart of Africa," gives the following curious anguries from cocks and hens, common to various negro tribes.

An oily fluid, concocted from a red wood called "Bengye," is administered to a hen. If the bird dies, there will be misfortune in war, if it survives, there will be victory.

WHITE PLYMOUTH ROCK.

First prize pullet at Chicago, 1908. Bred and owned by H. W. Halbach, Waterford, Wis. Photo not retouched.

Another mode of trying their fortune consists in seizing a cock and ducking its head repeatedly under water, until the cock is stiff and senseless. They then leave it to itself. If it should rally, they draw an omen that is favorable to their design, if it should succumb, they look for an adverse issue.

But Africa is not the only place on earth where supersti-

tions relating to poultry flourish, for though Hooker's "Tour in Morocco" mentions that a cock was sacrificed by one of his attendants to appease the wrath of the demons in the mountains, the same sort of black art was practiced in Europe up to a very late date and even now is not unheard of among the peasantry.

A curious motion respecting fowls existed in various parts of England. On the morning of St. Valentine's day, the girls, before opening the outer door, would look into the yard through the keyhole. If they saw a cock and a hen in company, it was taken for granted that the person most interested would be married before the year was out.

Mr. Dalyell, in his darker superstitions of Scotland, observes that during the prevalence of infectious diseases in the East, a cock was killed over the bed of the invalid, sprinkling the blood over the sick.

A red cock was dedicated by sick persons in Ceylon to a malignant divinity and afterward offered as a sacrifice in the event of recovery.

In "Credulities Past and Present" it is stated that, in Durham there is a superstition that if any person was bewitched, the author of the evil might be discovered by the following means.

To steal a black hen, take out the heart, stick it full of pins, and roast it at midnight. The "double" of the witch would come and nearly pull the door down. If the "double"

from a stewed cock as an excellent outward application for those in peril from wild beasts, declaring confidently that whosoever shall bathe himself in this shall fear no harm from lion or panther.

Gerard Legh, in his "Accedence of Armorie," affirms that "the Cooke, is the royallest birde that is, and of himself a king, for Nature hath crowned hime with a perpetual Diademe, to him and to his posteritie forever. He is the valiantest in battle of all the birdes, for he will rather die than yeelde to his aduersarie." And one old writer goes so far as to declare that the lion, whom we have always been taught to regard as generosity itself, feels his royal title somewhat impaired by the rivalry of the cock, and that the pretension to royalty suggested by the scarlet crest is distasteful to the king of beasts, who can brook no idea of a rival.

There was throughout the Middle Ages an idea that one was able to incorporate any desirable quality by looking around for some creature of which it was characteristic, and then promptly making some culinary preparation of which this creature's flesh should be a leading ingredient. "If," says one of these sages, "you would have a man talkative give him tongues, and seek out for him water-frogs, wilde geese and ducks, and other such creatures, notorious for their continual noise-making," and so the steady self-assertion and valor of the cock naturally suggested the idea that the weakly and retiring would find in him valuable nutriment.

Interior view of 240-foot breeding house at Tannenbaum Farm, Willoughby, Ohio. Barred Rocks, Columbian Wyandottes.

was not seen, any one of the neighbors who had passed a remarkably bad night was fixed upon.

A considerable body of folklore is associated with the cock. One strange notion that can be found all through the earlier literature or to be more explicit, the books of the Middle Ages is that the lion has a strong antipathy to this bird, and that the crowing of chanticleer will effectually put to rout the king of beasts. One can readily imagine that the lion prowling in the darkness round some human habitation, would naturally resent the shrill clarion of the cock, and that this idea might, with the delight in mysticism and symbolism of the Middle Ages, be readily transferred to the roaring lion a symbol often applied to the devil seeking whom he may devour, and from this down to the superstition that all evil spirits flee by the first crow of the cock.

"They say the wandering powers that love,

The silent darkness of the night,

At cock-crowing give o'er to rove,

And all in fear do take their flight."

Bourne tells us that he never met with any reason assigned for the departure of spirits at the cock-crowing, but in our mind the above legend in semi-fact has much to do with its origin.

Even as early as the pre-Christian days of Pliny we find this belief in the antagonism between the two creatures in full operation, for this ancient author prescribes the broth

While actual incorporation was doubtless regarded as the most effectual, mere possession was not by any means to be despised. Thus Porta tells us that "if you would have a man become bold and impudent, let him carry about him the skin and eyes of a cock and he will be fearless of his enemies, nay, he will be very terrible unto them."

Most of the old cookery books recommend cock's broth for weakness, and here is one of these preparations that in their days were famous.

"The cock selected must be a red one, and not too old, having cut him into quarters, he must be put into an earthenware pot, with the rootes of Fennell, Parcelly, and Succory, Corans, whole Mace, Annise seeds, and liquorice scraped and slyced." Half a pint of rosewater and a quart of white wine is then to be added, together with "two or three cleane Dates, a few prunes and raysons," and then all must stew gently for the space of twelve hours. Finally, "streine out the broth into some cleane vessell, and give thereof unto the weak person morning and evening, warmed and spiced as pleaseth the patient."

The so-called cock-ale was another famous remedy and consisted of strong ale mixed with the broth of a boiled cock.

It is peculiar to find that all through the world's history the cock seems to be a favorite in almost everything pertaining to superstitious rites, and an augury of good and evil.

The ancient Romans believed that a crystalline stone was

to be found in the gizzard of a cock as large as a bean and which had the property of rendering the wearer invisible, this wonderful stone was called alec torius, but was by no means to be found in every fowl, as it rendered the bird invisible as well, and what somewhat puzzles us is how they managed to find the bird, though they might have felt for it at night on the roost where it was supposed to rest. Others

But as this article is already long enough, let us now wish you a Happy New Year and conclude in the quaint and delightful "Armonnye of Byrdes" with a mingled Latin and English:

"The cock dyd say,
I use alway
To crow both first and last,
Lyke a Postle I am,
For I preach to man
And tell him the nyght is past."

WEIGHT OF FOWLS SHOULD BE CONSIDERED

Its Value in the Show Room and How to Get It—Every Variety Should Have a Weight Clause—Weight Is Given More Consideration by the Buyer Than Any Other Section

Written for American Poultry Journal by Dr. H. F. Ballard, Chenoa, Ill.

THERE are probably more birds disqualified on weight every year than on any other one section. If that is a fact then weight is one of the most important sections in the Standard, and it is probably written about the least.

Two points to the pound being cut for weight, makes a heavy handicap on the weight varieties. There is a mistake in my article of last month, where I stated that an 86-point bird would have to weigh four pounds more to score 90. He would have to weigh but two pounds more. But those last two pounds are harder to get than the first seven were. We talk of putting an extra pound on a bird as if it were a small matter, but it is not always so. Some birds will easily take on an extra pound in flesh while with others it often seems almost impossible to increase their weight. It will depend just as much on the birds as on the feed. You may place four birds in a coop and undertake to fatten them, but find it absolutely impossible to make them all weigh the

WHITE WYANDOTTE.

declare that this stone would relieve people from ever being thirsty and the cock that possessed the stone could be pointed out by the sign that it never did drink water.

The cock was at one time supposed to lay eggs from which were reared the deadly cockatrice. "When the cock is past seven years old an egg grows within him, whereat he greatly wonders. He seeks privately a warm place, and scratches a hole for a nest, to which he goes ten times daily. A toad privily watches him, and examines the nest every day to see if the egg be yet laid. When the toad finds the egg he rejoices much, and at length hatches it, bringing forth an animal with the head, breast and neck of a cock, and from thence downward the body of a serpent," says this naive old writer that lived and wrote when the world was young.

In the year 1474 a cock at Basle was publicly accused of having laid one of these objectionable eggs, and after a short trial was sentenced to death and burnt at the stake, together with the egg, in the market place, amidst a great concourse of the townsfolk, who were right joyfully thankful to feel that a great peril had been averted by the prompt action of their rulers, for a cockatrice was indeed no laughing matter to those who thought it one of the possibilities of life.

The poison of the cockatrice was without cure, and the air was in such a degree affected by it that no creature could live near it.

It killed, we are assured, not only by its touch, for even the sight of it, like that of the basilisk, was death.

Shakespeare makes use of this superstition, for we read, for instance, in "Romeo and Juliet," of "the death-darting eye of cockatrice" and again in King Richard III, "a cockatrice hast thou hatched into the world whose unavowed eye is murderous," while in "Twelfth Night" we find a passage, "this will so fright them both that they will kill one another by the look like cockatrices." The good people of Basle might, therefore, believing all this, very heartily congratulate themselves on their escape from a fearful peril.

Cock-crowing in mediaeval days received mystical importance from a belief that it was in the dawn of the morning that our Savior was born it was regarded, too, as a warning voice telling of the coming of the day of judgment, and sometimes when heard would call forth some pious ejaculation, it was also a standing reproach to Peter's denial of his master and a warning to all against self-sufficiency and base cowardice.

BLACK PRINCE.

same. If you place but one bird in a coop you will find it much easier, though I believe four will do better than two. There will always be a boss among them, whether you have two or more. I have had better success in fattening in coops than in pens.

Now as to the kind of feed to use, there is nothing better than corn, except cracked corn, and nothing better than cracked corn except cornbread and potatoes; cooked, of course. A good plan is to feed all corn the first week; then add about half cracked corn the second week; and about one-third cooked potatoes the third week.

Always remember, however, that birds fattened in this way will lose weight rapidly as soon as such feed is withheld unless some wheat, oats or other feed is used at the same time to a limited extent. There are two ways to have birds up in weight; one is the above method of feeding; the other is to have birds with such heavy frames that they will not have to be so fat to be up in weight. We Cochin breeders all like short-legged, low-down birds, but my experience has been they are nearly always under-sized and must be fat to win. A large-framed bird is generally leggy, is off in shape, no matter how fat he is, and seldom has feathers enough on legs and toes to meet the up-to-date Standard requirements. You will meet men who tell you this is not so, that they have them, etc., but just buy one from them and see if what I say is not true. I bought a P. C. cockerel two years ago from one of the largest breeders in the United States, on March 1, and he weighed just seven pounds.

One of the writers on Asiatics stated some time ago that

some others are disqualified for underweight. I would make Leghorns, Polish, Hamburgs and all small varieties above Bantams disqualified for both over and underweight. Suppose a Leghorn hen's weight is set at three and one-half pounds; then I would make all weighing over four and one-

A TYPICAL "TANNENBAUM" PULLET.

Scores of these sharp barred Ringy Rocks are on this farm. This pullet will be in the money this winter without doubt.—Ira M. Crowther.

half pounds cut for overweight, and all under two and one-half pounds disqualified, or at least cut for underweight. There is no justice in allowing one variety to go through with

S. C. WHITE ORPINGTON.

Cock "White Prince" which headed 1st pen at Cincinnati, Ohio, 1909. Owned by Minnehaha Poultry Farms, Bannock, Ohio.

he had Buff Cochin cockerels to weigh twelve pounds at ten months of age. I had always supposed he was a truthful man till I read that most breeders find it hard to make them weigh nine pounds. I have a good sum of money to pay for a twelve-pound ten-months-old Partridge Cochin cockerel, and I don't expect to be overrun with offers after this is printed, either.

The demand for size is so great that we can almost set our prices at so much per pound, leaving out all considerations of other sections entirely.

One thing is certain, we shall never get it by raising June and July chicks. I have had July hatched chicks priced to me to weigh nine pounds in January; I never saw one nor bought one.

I believe that every variety in the Standard should have a weight clause. I know the Leghorn men have been kicking such a proposition terribly, but they either do not want to be fair to other varieties or else their birds are off in the weight line.

But I should make the weight clause in the smaller varieties with a jumping off place at both ends. Bantams are disqualified for overweight. Asiatics, Plymouth Rocks and

Second prize S. C. Red Cock, at Chicago, December, 1909. Shown in three-quarter plumage at Chicago. Photo taken in full feather when he is equal to the best S. C. Cock in the world. Bred by Ira M. Crowther, Willoughby, Ohio, Box A.

no cuts whatever on weight, while another variety just as good in every way is cut four points on this one thing alone. If this were done we would not see so many 96-point birds in the small classes.

Notary Public.

OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the **American Poultry Journal**, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the **American Poultry Journal**, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

The Iron is Hot

Parcels post and exorbitant express rates are now commanding attention the whole country through, and especially among poultrymen and those other lines of business that depend more or less on quick service for the carrying and delivering of freight that is too small to ship by slow means of transportation. Many are the charges that are laid at the door of the express companies, especially in the matter of even charges for service. It is safe to say that three coops of chicks sent a week apart to the same destination and weighing to the ounce the same would not be charged for alike or delivered at the same time. We make this statement, having had some experience in the shipping of birds and other matter, and any breeder who has done much business with the express companies knows, or thinks he knows, that the same conditions prevail in his immediate vicinity.

The time is ripe. Keep after your congressmen. They are the men who can give the country what it wants by letting in a system of parcels post which would make the express companies drop their exorbitant charges and do business the shortest and quickest way. The postoffice department must take charge of a parcels post system, and the service is now so efficient in this department that they can add this parcels system to their work with very little inconvenience.

One of the charges laid up against the express companies is that they carry stock the longest way round to get the most out of the haul. We cannot say that we have noted this, but we do see very frequently stock hauled out of its way to get it to a destination over one company's line of operation. Whether this is used to help get the charges up we cannot say. We know that a common express point, or point between which two or more companies deliver and receive parcels and freight, have cheaper rates per hundred pounds on carrying freight than where one company handles

SUBSCRIPTION PRICE.

Subscription 50 Cents a Year—5 Cents a Copy of all Newsdealers. Chicago subscriptions 60 cents (when delivered by carriers). Foreign subscriptions \$1.00. Canadian subscriptions, 75 cents.

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the **JOURNAL** at the expiration of time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

all the business between two towns or stations both on its own line. This seems to be taking advantage of a monopoly.

What the poultrymen of the country want is a constant hammering into them that the time has come where we cease to submit to the express companies' power both in and out of Congress. We all know that the lawmakers have among them a number of express company members who are vitally interested in seeing that the companies get more than is lawfully coming to them. One of the prominent senators or former senators was president of the United States Express Company, and he would do all he could to keep the parcels post down, as it would lessen the revenue of his company, as well as cut down the annual highway robbery of other companies.

Every poultryman in the country should squander a couple of cents on a stamp to mail a letter of protest to his congressman. This will get what we want. If all the poultrymen of the country will line up for the fight this winter we can at least make a dent in the opposition to a low-rated parcels post and cheaper express rates. Lend a hand and quit sitting back and waiting for the other fellow to make the first move.

Room and the Time For Big Things

The poultry business has positively outgrown the side-line scale of importance. It has during the past few years become one of the recognized branches of animal husbandry. The food markets of the world are placing it side by side with the other branches of the live stock industry. The millions of dollars of invested capital in poultry plants and accessories are so invested because the thousands and thousands who are behind the business are steadily going forward in their work, while countless numbers are going into the work of producing market eggs and table fowls every season. The millions behind the great manufacturing plants

making incubators and supplies essential to the poultryman have not been put into this form of revenue earning on first impulse. They are there as a well-studied investment, the demand for the goods they are producing being constantly enlarging.

The breeder who is working to create better formed and colored fowls, who is laboring from year to year to produce better layers, is more or less directly helping to supply these demands of the market, as he supplies the producer his working material in the shape of better fowls for breeding purposes. The women of the farms of America are growing millions of fowls every year for the market and are producing thousands and even millions of dozens of eggs for the world's consumption, and the task of getting them interested in better fowls for breeding purposes and laying, the better birds giving more pounds of meat for the same amount of care and feed and likewise the layers of better breeding giving greater profits, is one of immense importance.

There seems to be no end to the scale on which standard bred poultry may be bred. This industry is founded on the demand for market fowls. The demand for table fowls will increase as the prices of beef stay high, and the increase in the populations growing over a million a year means that poultry growers will never be able to supply the demand to such an extent that the market will go lower than it should. All these signs point to a still greater growth of the standard bred poultry industry.

Opportunities in the business?

Certainly! They are lying about everywhere. There is a demand right now for big institutions in the West and the central states, where the top quality in show stock and breeding birds is produced. We know of but a single big farm devoted to any of the Plymouth Rock family. We mean a farm that stands out head and shoulders over the industry in these two sections. The Wyandottes are lacking in champions

\$6.41 a year per hen

The CORNING EGG-BOOK

which tells how the Cornings, father and son, on a little egg-farm at Bound Brook, N. J., cleared **over \$12,000** last year. They began four years ago, in poor health and without experience, starting with only thirty hens. to have 4000 hens. Will they make **TWICE \$12,000?** and find out.

Next year they expect
Get the **FARM JOURNAL**

The **Corning Egg-Book** is a capital guide, for it gives in full detail the **METHODS** learned and proved by experience. All your troubles the Cornings have met, all your problems they have solved. They have worked with small and large flocks, they have tried different systems. The book tells where they sell all their eggs at high prices, how to get most eggs when others get none, when to hatch chicks that are to lay winter eggs, how to mix the feed that makes the most eggs, how to save 97 per cent of the chicks, etc. The book gives pictures of their plant, and plans of their buildings.

The Corning Egg-Book is sold in combination with the
FARM JOURNAL **to increase its subscription list to ONE MILLION for next year**

Farm Journal has for thirty-three years conducted a poultry department known the country over for the ability of its editors and the value of its contents. All its other departments also are ably conducted and widely quoted. It is the standard monthly farm and home paper of the country, with already more than 600,000 subscribers. It is clean, bright, intensely practical; boiled down; cream, not skim-milk. It is illustrated and well printed on good paper. It has not a medical or trashy advertisement in it. More than half a million of its subscribers pay five and ten years ahead—a very remarkable fact.

HERE IS OUR OFFER:—We will send, postpaid, **The Corning Egg-Book** and **Farm Journal** for five years, **BOTH for \$1.00**, cash, money order or check. And if you send order and money within *ten days*, we will send also "Poor Richard Revived," a splendid 48-page **FARM ALMANAC** for 1910, full of wit and wisdom for the rural home.

who can do the thing on the Owen Farms scale or give any variety of them the time and attention and breeding care that Mr. Kellerstrass has given to the White Orpingtons.

There are opportunities enough, goodness knows. We need more men to take hold of them and make them work out. There is need for a big waterfowl farm and the profits from it are sure. The Leghorns need a few more champions who will put up or gradually build up institutions for their breeding and advancement. The demand of the fanciers for years has been for more good Reds, and the time is ripe now. Good poultry managers can be procured, and the time it will take to begin to reap the benefits of careful breeding will not be long. Men who will put time and money into the business are wanted. The more of them that have the fancier's true incentive the better. Brains mix best with money, not lavishness.

The time is at hand. Good stock can be procured for reasonable figures. Locations are not hard to find. The land need not be of the best farming kind, but can be more or less adapted to fruit growing and be well drained. The rigors of the winters here in the central and western states are gradually becoming less in their severity, and buildings and building material need not be the biggest item of the foundation. We need more brainy men of means who have the inclination to get into the game in a big way. The path has been blazed—let's go ahead.

The Incubator and the Poultryman

It is conceded by all breeders who have been in the business long enough that one cannot get along without a good incubator if he expects to be in winnings at the shows. When the largest farms of the country that are given over to the production of high class show and breeding birds all say that incubators are essential to their success in getting out early chicks in numbers to meet the demand, then it is time for the stubborn fellow who thinks he is getting all the good out of the hatching season with his hen-power incubator to fall into line and become down-to-the-minute in his methods of breeding. Nothing is harder as a task than to get out early chicks with hens to do the incubating. The care of the small broods is more than would be twice the same number of chicks in a brooder. The work of handling the hens would be more than four or five times the task of caring for the incubator, and the latter would work steadily while the hens keep to their nests with more or less certainty—principally less.

It is well known to all who are giving the incubators and brooders a chance to do their share of the hatching task that chicks hatched together and with an incubator grow more evenly and thrive better early in the spring than those given over to the care of the hens. This is one of the things that has made the incubator a standby of the men who go to the shows to win. It takes weight in a majority of the shows to win, other things being equal, and say what you will, the evidence that the breeders are producing year after year in the shape of good birds at the leading shows, especially the early shows, goes to pile up the points in favor of the early hatched incubator chicken.

Every year we note more articles in the farm journals and other papers that have been giving poultry matter, on the ad-

Scene II. Martha! What do you think, I jes saw Mr. Nofztger what breeds those Partridge Rock chickens and he had sold 10 of them chickens fer \$200.00. Yes, I dew mean it! He had them in fine coops good enough fer a canary bird cage and was taking them to the station to send them to Caleforney. You know these dung-hill chickens you raise don't lay many eggs and when you sell any you only get 50c apiece and then have to trade it out. I think we better get that ere American Poultry Journal and learn how tew raise thourabreds same as Nofztger did, then we can get big prices tew, all right. Martha, I'll give Nofztger 50c fer the American fer a year fust time I see him, seeing you say so. Continued in our next.

visability of the farmer's wife using incubators to get out her early broilers so that they would come on the market at a time when the prices were best. And having the incubator, one also is easily at the work of getting out early hatched pullets to lay during the coming winter and fall. The cockerels can be turned off on the broiler market and the pullets saved for the laying flocks.

The standard makes of incubators of today do not require the amount of time and attention that some non-users seem to think they would. The present day incubator is absolutely self-regulating and ventilating, and the few instructions that are sent with it by the manufacturers are simple and require nothing more to operate them. The incubator and the brooder have had much to do with the advancement of the industry the world over. They have been the means of making certain the numbers and quality of the early hatched chick, and in the poultry business as in other lines, the early bird gets the bug.

The "International" Show

The Crystal Palace show is over. The greatest event of the show season in England is generally this exhibition. It was so this year. The finest feature of this year's event was the line-up of Orpingtons, so our English contemporaries tell us. Wilfred H. G.*Ewart, one of the most widely read critics of Great Britain, says that the striking advancement of the entire Orpington entry was made among the Whites. They were way ahead of anything that has been shown so far this year in that country as regards their improved type and color.

There is no getting about the fact that the Whites are going ahead. The variety in America is on the upward go and we may look forward to better birds every year. Its great practical value and its hardihood and beauty

make it friends everywhere it becomes known. The type we are being shown by the leading breeders this winter is better than what we have seen, right here at home.

Black Orpingtons have the advantage in England of having a very influential club behind them, and consequently they were out in great numbers after the many cups and specials offered. Buffs were again in strong evidence. These cannot be made to take back seats by their sister varieties and have come to stay and sort of father it over the later varieties.

Barred Rocks and Buffs were out in numbers, and some more than the average interest is being manifested in Barreds, for the reason that a \$250 male recently changed hands at this figure over there and continues to win first wherever he is exhibited. Our cousins like a Barred bird a bit too open in color to suit us and we honestly feel that if once the American Plymouth Rock Club would send a string of our type of Rocks over there, they would "catch on," as the English say, at once.

Australian Layers Going On

Poultry is about the only journal that is keeping track here in America of the Australian laying competitions. In the last issue we find the report of the first half of the eighth annual contest. These contests that we have mentioned from time to time in these columns have been under the supervision of the government poultry experts and no favorites have been played in operating them. One pen of Black Orpingtons have been in test under this supervision for eighteen months and the six hens have laid 1,840 eggs for eighteen months. The six White Leghorns have a record for the same length of time of 1,723 eggs. In the new twelve months' competition, the first half of which has

We Sell Everything that you use, eat or wear.

Our large, new catalogue, No. 78, shows our full line. All the goods shown in this advertisement and 125,000 other articles are fully described in the big catalogue. You may order any goods from our Chicago house at prices here quoted, or you may send for a free copy of the No. 78 catalogue and read full particulars of all these goods and many more you will want. Try to make your order reach 100 lbs. or more in weight, and have it sent by freight. That is cheapest for you. Where we quote postage it means that if you order a single item by mail that amount of postage should be sent in addition to the quoted price. If you order that item to be sent with other goods by freight or express you'll save the postage.

NOTICE: We have stores in Chicago and Kansas City. If you live west or southwest of Kansas City write for our special Kansas City catalogue and order from our store in that city, from which point only you will pay freight. All others will send to our Chicago house and pay freight from Chicago. With any goods you order, ask us to send you a large, new catalogue No. 78 and we will help you save some money. Send for the free Catalogue, anyway.

OF QUALITY

At Princeton, Illinois, on six entries I won 1st cock, 1st and 3d hen, 3d cockerel, 3d and 4th pullet, 1st pen; at Kewanee, 1st and 3d cock, 1st and 3d hen, 1st pullet, 3d cockerel, 1st pen and special for best Wyandotte in show. 40 choice cockerels for sale at \$2 to \$5 each. Eggs from birds securing 92% to 95%, \$3 and \$5 per 15. Satisfaction guaranteed.

H. L. Logue :: Neponset, Illinois

Buff Leghorns

Produce the winners. They have won the best prizes for years past. Lamons' old strain pure. Choice show and breeding birds for sale. Write for prices.

Philip Hanlon, Jr. Watertown, New York

White Rocks

And R. C. White Leghorns

bred for size, shape and color. A few good utility White Rock pullets that will do you good at \$1.50 each for the next 30 days. Orders for eggs from our well selected matings booked now.

E. H. Reichert :: VirAen, Illinois

Buff Wyandottes

Best in Ohio. On six entries at Cleveland I won 1st pen, 2d cockerel, 4th cock, 4th pullet and silver challenge cup for best display. Some choice young stock for the Fall and Winter shows. Write today for prices and particulars. Eggs from some extra good matings.

T. K. Martin :: Chicago, Huron County, Ohio

Afton Farm

Yardley, Penna.

For Utility Stock

WELLS' STRAIN OF

R. C. R. I. Reds

A strain of large, healthy, vigorous birds bred for rich color and proper shape. Winners for three years at the Grand Rapids show and West Michigan State Fair. Four firsts at the recent fair. Exhibition stock for sale. Satisfaction guaranteed. Write for prices.

DR. E. W. WELLS
576 Butterworth Avenue :: Grand Rapids, Michigan

been finished, there are sixty pens of six hens each, from as many different flocks. Silver Wyandottes are at the lead, with 724 eggs to the credit of the six hens. Four pens of White Leghorns follow these, with records of 677 on down to 652. Two pens of Black Orpingtons are after them, with 652 and 635 eggs each to their credit. It is a matter worthy of note that the hens at the bottom of the list for the first six months were bred and are entered by the man who won first with Silver Wyandottes two years in succession earlier in the history of the government contests. The why of this we probably will never learn. It stands to reason that if Mr. Howell, who won two contests with his heavy laying Silvers, was successful enough to produce two winning pens he certainly thought that those he entered the third time would do to win or he would not have endangered his reputation.

Do You Agree?

There are in all businesses some failures among those who go into them with little experience and no knowledge of what it takes to make the successful stand. This is just as true of poultry growing as it is of anything. Those who make the most out of the business generally start in with small beginnings and expand as they learn to use what they find to be the essentials. A few hundred dollars invested in suitable buildings and breeding fowls should be enough to start any one who thinks the qualities of a poultryman are fused within him.

Capital is, of course, required, but how to expend that capital is what the knowledge is needed for. In the laying out of large poultry farms it is possible to get the advice and experience of others and thus go ahead in faster manner than were one to depend on himself and grow with the business. The failures in the poultry business are generally due to a lack of attention to the little things. It is a business made up of details and one that will fail if they are overlooked. There is no heavy manual labor about the poultry farm after the buildings are up and the fencing made, but nevertheless what details that must be attended at the right time all take energy and make one feel the sweet rest at the end of the day's work. Returns are quick and if the brains have been abundantly mixed with the capital the profits will be forthcoming in splendid manner.

Help the Buyer

We are slowly but surely coming together in our ideas of what makes up quality in the various fowls we make our hobbies. A few years ago there was much more difference of judging opinion than there is today, and we hope that the continual diminishing of differences will go on. The fancy is thus getting on to more solid ground. We recently saw the correspondence of a breeder who lives in the north and who had shipped a few exhibition and breeding Barred Rocks to an extremely southern state. The buyer was well pleased, and we know that what he got were down-to-date Rocks in every way. His one suggestion was that the exhibition cockerel was a bit too dark to suit some of the southern judges, but after

he had been assured that this cockerel's would soon be the accepted color in his section of the country he was glad to have had the breeder make the proper selection for him and thus put him at the head of the van. Courtesy in the treatment of customers who are not exactly sure they know what they want always pays, and to tell a man why you as a breeder have sent him certain type and color often pays. Good testimonials are of great value to every man who is in the business and we cannot go out of the regular path of business too far to get them.

English Red Wyandottes

Rhode Island Red breeders will think that their domain is being trespassed by some of our English cousins, who are making a breed or variety to be known as Red Wyandottes. The cover photo of one of the late issues of Feathered Life is of a Red Wyandotte pullet, of which the following is said:

"The originals of this new variety were bred from pedigree palace-winning Wyandottes. The cockerel is fairly dark red on back and wings, a lighter shade on breast and underparts, with golden red neck and saddle hackles, black tail tipped with red, bright yellow legs, yellow beak, bay eye, red lobes and general Wyandotte characteristics. The pullet is a slightly subdued red throughout, except neck, which is golden red, and excellent type. A flock of this color forms a very rich contrast and pleasant picture on a grass run, and hold their color wonderfully well without protection under all conditions."

Red Wyandottes were originated by Mr. Allen Bullock, one of the well-known fanciers of the tight little isle, and are already having quite a little boom. When it comes to new varieties and breeds the English are right to the front and probably will stay there.

Philadelphia in Line

One of the great shows of the East will again be seen at Philadelphia, Pa., January 18 to 22, 1910. Just as soon as Mr. Henry D. Riley landed from his year's vacation abroad the wheels were set in motion, with every assurance that the former efforts of the Penn breeders to hold a general national and state show will be surpassed.

The Philadelphia list of cash and cup specials has always been a feature in the past, and this coming show will be no exception. The breeder will find many flattering inducements again and it is hoped will give this show the aid due it.

The officers are H. D. Riley, president; W. H. Moore, vice-president; C. C. Kempton, treasurer, and Ed Hickman, superintendent.

The judges are M. F. Corey, C. J. Cornman, J. H. Drevenstedt, W. C. Denny, H. P. Schwab, W. J. Stakes, C. E. Petersen, J. J. Ritz, Fred Huyler and Al Ingram.

The entries close January 5, 1910. Address Henry D. Riley, 503 Mint Arcade, Philadelphia, Pa., for premium list and all other information.

H. P. Schwab.

Now is the time to plan on getting that new incubator and brooder. Don't wait till the last moment. Do it now.

Importer and Exhibitor of Standard Game Specialties

Eggs from my imported Standard Games and Game Bantams. \$5 per 15. Quality guaranteed. Eggs from my Ornamental Bantams, Golden and Silver Sebrights, White and Black Rose Combs. HAUPT'S ORPINGTONS

in Single or Rose Comb Buffs, Whites or Blacks are conceded the best. Ten years an Orpington specialist, having won hundreds of prizes, specials, cups, diplomas, etc. Does that stand for anything? Have started more successful Orpington breeders than all others. Winners at New York, Phila., Allentown, Jamestown Expo., Va., Easton, etc. Our latest success at Pa. State Show: 1st pen W. Orps., 1st pen Blk. Orps., 1st S. C. Buff cock, 1st R. C. Buff cock, 1st R. C. Buff hen; 5 possible 1st prizes on 6 entries. For stock, eggs or chicks, write us. We guarantee all our dealings.

FAIRVIEW FARM - J. S. HAUPT - EASTON, PENNA.

Barred Ply. Rocks and Columbian Wyandottes

Barred P. Rocks which are bred from a list of winners at the hottest shows in this part of the country for the past 12 years. We offer for sale both old and young stock, singly, in pairs, trios or pens for pullet or cockerel mating. Books now open for egg orders. : : : : :

Col. Wyandottes which have never been without a place in the show rooms for the past 4 years. We only offer for sale a number of fine shaped, blocky ckls. with good markings. Orders for eggs should be booked early, as we will have only a limited number of Columbian Wyandotte eggs. :

Tannenbaum Farms : : Willoughby, Ohio

IF YOU ARE LOOKING

For exhibition birds that will land the ribbons for you at this Winter's shows, or for good breeders for next year's matings, do not overlook the fact that

First Prize Pullet, Illinois State Fair, 1909

Bickerdike's Pedigreed White Rocks

are unequalled for quality in both fancy and utility. Our birds are trap-nested and bred for egg production with individual records of 240 eggs per year. As for their exhibition quality they

Always Win the Lion's Share of Ribbons

at the largest shows. Our winnings given below proves conclusively that the Bickerdike Pedigreed White Rocks stand in the lead in the show room:

Illinois State Fair, 1907—1st, 2d and 3d cock; 2d and 3d cockerel; 2d and 3d hen; 1st and 3d pullet; 1st and 2d pen.

Missouri State Show, 1908—On five birds entered: 1st cock; 1st hen; 3d and 4th pullet.

Illinois State Show, 1909—On five birds entered: 1st cock; 1st and 2d pullet; 3d hen.

Illinois State Fair, 1909—1st, 2d and 3d cock, 1st, 2d and 3d cockerel; 1st, 2d and 3d hen; 1st, 2d and 3d pullet; 1st and 2d pen.

These winnings were no accident, but **"There's a Reason."** Our birds are **pedigreed** with the trap nest system, and pedigree goes with each bird. Be sure you know what is back of the bird you buy. When you buy Bickerdike's Pedigreed White Rocks, you get individual blood lines that can be had from no other breeder in America. For quality buy pedigreed birds. We have a grand bunch of stock for sale. Before buying your show birds or breeding stock, write your wants to

J. A. Bickerdike Box A Millersville, Illinois

THE CHICAGO SHOW

The Quality Show of the West.

It's all over. The greatest show of the middle West has come and gone. Poultry fanciers from far and near, or in the wider sense of the word, the fanciers of America, for the majority are ranked among the foremost breeders in this country, paid homage to the first annual show of the new association. They came and saw and the unanimous verdict by all was that it was the greatest and best managed show ever staged in this city. In every respect this year's show was so far ahead in everything that a comparison with other shows held in Chicago puts it in a class by itself. That the show would be a success was not doubted for a minute, it simply could not go wrong with such fine management. The praise of one applies to all. Theo. Hewes was everywhere, looking after every detail with a vim that is characteristic of him. We saw our old friend Dick Richards chasing around with a hammer (not a "knocker") fixing up things here and there. In Mr. Dipple, the superintendent, they had the best man for the job. He certainly had his hands full, but not a single kick was registered. The selec-

tion of judges could not have been better. They gave general satisfaction all around and the only real knocking was done in the Rhode Island Red alley, where competition was the keenest seen in years. "Macky" Pierce, ably seconded by A. F. Kummer, was there with the "smile that won't come off" and did fine work. Our friend McCord, who gave such great satisfaction at the Springfield show, added another notch to his already great record, and his work gave fine satisfaction. Little Chas. Keeler delivered the goods in fine style. Geo. Burgott, who came all the way from Lawton Station, N. Y., made a host of friends and his work was highly commended. In every aspect the show of this year will act as a great

advertisement for its promoters, and there is no doubt that the fanciers, with the fine treatment they have received, will come back next year with an increased number of birds, as well as inducing others to show here. All indications point to it that we will have a truly great show next year, a show that will make New York hustle to keep first place.

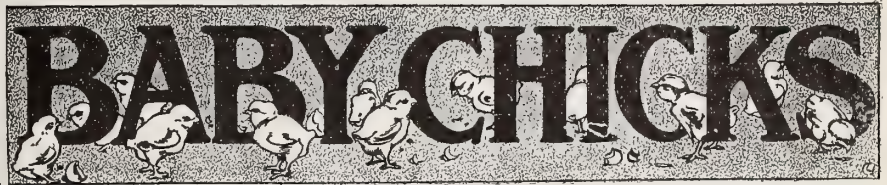

Not only was the show a success from a fanciers' standpoint, the financial end of it was far better than expected. In spite of the inclement weather, the show was well patronized, the absence of complimentary tickets brought a class of people to the hall that were really interested in poultry and were buyers, and this is what we want. Many fine sales were made, prizes were promptly paid and everybody was happy and when the doors closed on the best show ever held in Chicago, breeders from thirty-two states in America vowed to meet again in Chicago a year hence.

In Barred Plymouth Rocks there were 121 birds in single class, and the quality could not be better. First and second cock birds, exhibited by Edgar Simpson, Naperville, Ill., were certainly typical of the breed and were easy

PARTIAL VIEW OF INTERIOR OF COLISEUM, WHERE THE GREAT CHICAGO SHOW WAS HELD.

LAKEWOOD FARMS

Ready for Delivery—Write Today

THE breed that develop into profit makers. Hard working, sturdy, hardy chicks, that grow up into the strong and valuable profitable egg producers.

Lakewood Farms Dual Purpose Chickens are the kind of chickens that are at work for you all the time—"in overalls with their sleeves rolled up." They are blue ribbon winners when it comes to being ornamental, but they are the highest prize winners in their competition for egg laying and meat producing.

When you order a flock of baby chicks from Lakewood Farms, you get a guarantee with them that every one will reach you in healthy condition. Give them ordinary intelligent care they will develop into the most profitable chicken investment you ever saw or heard of—easy to raise and the most profitable fowl there is.

Beside the profit you can make after we send you Dual Purpose Leghorn chicks of the Lakewood Farms original breed, we also give you the opportunity of owning stock in the greatest chicken farm in the world.

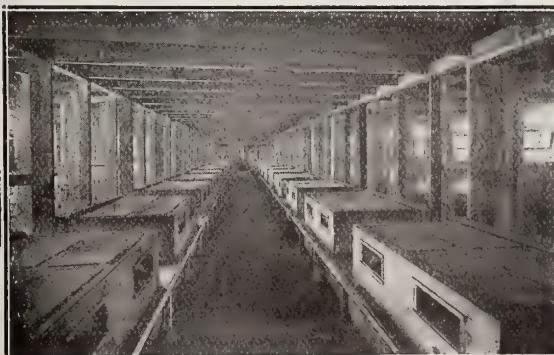

We also issue a valuable and complete catalogue of information about the various supplies, health foods and other remedies for the poultry raiser and dog fancier. Write for it; it is free.

Another book you can have for the asking is "The Hen of Destiny" a mighty practical and interesting talk which every poultryer should have.

Capacity—10,000 Baby Chicks.

winners, as was first hen, owned by same party. This class was so warm that many fine specimens did not get a place.

White Plymouth Rocks were well represented by some of the best birds in the country. The first prize cock, owned by Preston B. Condit, Indianapolis, Ind., was one of the best birds exhibited in Chicago in recent years and rightly deserved the blue. The first hen, owned by same breeder, was certainly deserving of the place she got. The first cockerel, owned by H. W. Halbach, Waterford, Wis., was typical of the stock produced by this breeder and was an easy winner. There was quality to burn in this class throughout.

Columbian Plymouth Rocks.—Thirty-seven in all were on exhibition—undoubtedly the largest and best showing of this breed yet made at any show. Mr. F. M. Clemans, Mechanicsburg, Ohio, vice president of American Columbian Plymouth Rock Club, showed twenty-one birds that were a revelation in true Rock type and real Light Brahma color. One great trouble has been to get this bird away from any correspondence to the Columbian 'Dotte type. Mr. Clemans, in establishing his strain, drew heavily on Light Brahma and P. Rock blood, and the results are surely in evidence in the size, bone and shape of the birds he shows. Mr. Clemans carried off the leading prizes, winning first and second on cock, cockerel, hen, pullet and first breeding pen. Also silver cup for best display. Mrs. Judy's showing of Columbians was also highly creditable, she winning second on breeding pen. This bird is a sure winner and will be heard from with emphasis at future big shows.

Partridge Plymouth Rocks were represented by eighteen in the single class, and the originator, S. A. Nofztger, Manchester, Ind., captured the cream of the prizes. Mr. Nofztger is to be congratulated on his success in producing birds of the quality shown here. He has certainly got them near perfection.

Silver Wyandottes, the old standbys, were well represented by birds of the highest quality. The first cock, owned by Clare E. Hoffman, Allegan, Mich., showed what could be done with this variety by careful breeding. A. & E.

Tarbox, Yorkville, Ill., showed a good string and won a number of the blues.

Golden Wyandottes was a strong class, and J. H. McDanell, Warsaw, Ky., showed some exceptionally fine specimens, winning first cock and several other prizes. J. S. Pennington, Plainfield, Ill., also showed some very fine specimens, good enough to get in the money. Simmons Bros., Stockton, Ill., captured first pullet on a bird that in our estimation was the best of this variety ever exhibited in the West.

White Wyandottes. Here again was quality of the highest order and all sections of the country were represented: J. W. Andrews, Brighton,

One of Ed Chambers' prize winning Buff Orpingtons. Bred and owned by Ed Chambers, Aurora, Ind.

Mass., sent some of his choicest birds and made a very creditable winning. J. H. Jackson, Hudson, Mass., showed a fine pen, on which he was awarded fifth.

In Buff Wyandottes, Simon Beuth, German Valley, Ill., as usual, captured the cream of the prizes. This was a strong class.

Partridge Wyandottes were out in force and the quality was superb.

Columbian Wyandottes were shown forty-one strong in the single class. The string shown by Walter G. Fenton, Mt. Clemens, Mich., was probably the

strongest string of this variety ever exhibited in this country by any one exhibitor, which resulted in him winning every first but one.

S. C. Rhode Island Reds was the largest class in the show, and the battle for honors was something fierce. Lester Tompkins, Concord, N. H., was a large winner. Ira M. Crowther, Willoughby, Ohio, also showed some fine specimens, which, had they been a little further along, would no doubt have won the blue.

The R. C. Reds were also out in goodly numbers, and it was a battle royal between Buschman, Sibley, Tompkins and Tuttle.

In Light Brahmas the River Home Poultry Yards, Perrysburg, Ohio, came out to win and they captured everything in sight.

Black Langshans was a good class and of good quality. R. A. Hewes, Crete, Ill., and Jesse T. Bateman, Waverly, Ill., showed many choice specimens and took home many prizes.

In S. C. White Leghorns, N. P. Easling, Pekin, Ill., came very near capturing every prize. His string was certainly grand and he deserved all he got. Huber Bros., Kenosha, Wis., also made a good winning.

S. C. Brown Leghorns were out in full force, there being ninety-seven in single class. W. H. Wiebke captured first and second cock and first and fifth cockerel on birds that were certainly up to standard requirements. Mr. Wiebke has gotten into the habit of capturing prizes and simply can't help but win when he exhibits his stock. He breeds that kind.

S. C. Buff Leghorns. Talk about buff; here is where it was strong, and F. A. Tecktonius, Racine, Wis., was there with the goods. This variety is rapidly forging to the front again at the big shows and will continue to do so as long as it has such men as Tecktonius behind it. The same can be said about the Rose Combs of this variety.

In the S. C. Black Minorca alley Chas. G. Pape, Ft. Wayne, Ind., and A. Didricksen, Whitewater, Wis., were the chief contenders for prizes. They came out with honors about even.

The class of Rose Comb White Minorcas was well represented with birds of good quality, and the important winner was J. J. Hurlbert, of Morri-

ORPINGTONS

Buff, Black and White

If stock ordered is not satisfactory, advise me promptly and tell me why, and I will replace it or refund your money. I am not in the business for pecuniary gain only.

Your order is solicited in view of these liberal assurances. Bear this in mind for your present or future requirements. To avoid inconvenience and delay, be sure and specify the quality desired. My catalog and Fall sale list is free. I won more prizes on Orpingtons at 1908 Chicago shows than any other exhibitor. There's a reason. Start right and you'll succeed.

C. S. Byers : Orpington Specialist 11 Years : Hazelrigg, Ind.

ALL the world is waiting for the fellow who delivers the goods. Now, I have the stock. I know that no breeder in the States can and will give you more value for your money than I can and will give you at this time. My complete stock of carefully line bred birds, including hundreds of exhibition specimens, means something, and an enviable show record awaits the early purchaser of this show stock, which I will condition for your show if desired. Your better interests will be guarded, not forgotten the moment your money is received if sent this way. At \$5, \$7.50 and \$10 each I will sell you as good birds as any breeder, large or small, can possibly supply at these prices. More money will get you exhibition stock that will win in the keenest competition. I want your order, and when I get it the treatment accorded you will merit a continuance of your valued patronage.

THOROUGHbred STOCK FREE

We are giving as premiums Standard bred fowls, consisting of cockerels, pairs, trios and pens. We do this to introduce the best 25c poultry journal published. A few hours' work is all that is required. Particulars free. Please mention American Poultry Journal when writing.

WORLD'S FAMOUS INCUBATOR

Entirely New System of Heating and Turning : : : the Eggs : : :

which is along the lines of and in accordance to Nature's Laws which control the earth, all things revolve in a circle, hence we revolve the eggs in our World's Famous Incubator in a circle without jarring them or touching them with the hands. All eggs are turned in one operation.

The Reason Why Chicks Die in the Shell Discovered at Last

which is the unnatural method of turning them, which causes a knot to be tied or at least a twist to form in the cord which attaches the embryo to the yolk of the egg and from which it must derive its nourishment after the 18th day. This twist or knot prevents it receiving this nourishment, and death is the result.

With our method of turning the eggs in a gentle, natural manner, we prevent this; hence there are *no chicks dead in the shell in the World's Famous*,

Our Double Regulating Device

which is *entirely new* and found on no other incubator absolutely prevents overheating. The large oil fount holds 3 gallons of oil, and one filling completes a hatch. The many new features to be found only in the World's Famous incubators and Brooders make them the surest, simplest and BEST.

WHITE PLYMOUTH ROCKS

Farm raised and line bred for ten years. Won at Cincinnati, November 29 to December 5, 1909, 1st, 2d and 4th cock; 2d, 3d and 4th cockerel; 2d, 3d and 5th hen; 4th and 5th pullet and 1st and 2d pen. Judge Pierce said the cockerel at head of first pen was the best cockerel in the show and said this bird and my first prize cock were "Wonders in White Rocks." also gave the first prize cock bird special for best colored male in the American class. If you want show birds or utility stock, write for prices. Eggs for sale after January 20th, 1910. Also white Scotch Collie pups for sale.

H. L. Brown, R. F. D. No. 4, Oxford, Ohio

ROBISON'S BUFF ROCKS

Have winning ways. And as usual did the best winning. At Central Missouri show, November, 1909, won 1st and 2d cock; 2d, 3d and 5th cockerel; 1st, 2d, 3d, 4th and 5th hen; 1st, 2d, 3d and 5th pullet; 1st, 3d and 5th pen. With 26 birds I won 69 points, (competitor with 23 birds won 33½ points). My birds won honors of largest and best display, any and all varieties, also largest and best display one variety. At Missouri State show, December, 1909, with 282 Buff Rocks competing, I won 1st pen (16 pens competing), 4th pullet, club special for best shaped female, (125 competing), silver cup for best pen. 100 birds yet for sale at living prices.

CRUSADER III

Regal White Wyandotte Book

I have just received from the press my new book on White Wyandottes. It contains 52 pages and is the most complete book that has ever been published dealing wholly with the White Wyandotte. It is full of illustrations from life and its pages deal with a variety of subjects including origin, description, feeding, care of breeding stock, fertility, color, characteristics, washing for exhibition, poultry diseases, etc. My object in issuing this book is to bring to the attention of every White Wyandotte breeder, the Regal strain, America's finest White Wyandottes. The magnificent winnings of this strain at the leading shows have never been equalled. N. Y. State Fair, 1906, 1907, 1908 and 1909—21 blue ribbons out of a possible 24. Would you like such a record? Then breed the Regal strain. 1,000 Regal cocks, hens, cockerels and pullets for breeding or exhibition. Free—Send for my book—It is free.

JOHN S. MARTIN

Truckenbrod's Standard Barred Ply. Rocks

ARE WORLD'S BEST FAMOUS PRIZE WINNERS—Made a record at Great Chicago Show by winning more prizes on cockerels than all competitors combined. Our breeding has produced 1st, 2d, 3d, 4th and 5th prizes on males at Chicago show. They are now leaders of America for exhibition males. Our Teddy line of males are famous as prize winners. They have defeated Madison Square, New York and Boston winners in the shows. We have raised an extra choice lot of exhibition cockerels and pullets this season and can supply you with winners for any show. These birds are line bred from our famous Chicago winners, are fine in shape, size, barring and snappy color. For sale—Exhibition and breeding birds, old and young, two Chicago winning males, carefully mated trios and pens for exhibition cockerel or pullet breeding at reasonable price. Satisfaction guaranteed. Write us for free circular showing our Chicago winners from life. Eggs \$5.00 per 13. Mention American Poultry Journal.

Teddy V, Our Second Prize Cockerel at Chicago, 1908

Standard Rock Farm
Truckenbrod Bros, Mendota, Illinois

son, Ill. He won first, second and third cock; first and third hen; second cockerel; first, second and third pullet. In Single Comb White Minorcas Mr. Hurlbert won first cockerel, third and fourth pullet. The birds shown by Mr. Hurlbert were fine specimens of the variety, much admired by all who saw them.

The different varieties of Orpingtons were out in force and the prizes were well distributed. No one breeder having a walk-away.

The waterfowls were not out in very large numbers, but what was lacking in numbers was made up in quality.

Going to Buy

Breeders, exhibition birds or utility flocks? No matter what you want, remember no breeder can take care of you as well as we. Consider well the new Standard type White Rock male. We have about 1,500 choice cockerels of this new Standard type, with blood lines back of them no other White Rock breeder can give you. It is a conceded fact the world over that

The New Standard Type White Rock Male

U. R. Fishel's White Plymouth Rocks

are the most beautiful and profitable of all breeds; as egg producers they have no equal, while as prize winners there are none to compare with them. The poultry crop is 50 per cent short this season, so take my advice and buy early. We have the best lot of farm reared stock we ever offered for sale, and would be pleased to have your order. Our matings this season are so far superior to any previous year that our egg customers will surely get their money's worth. Our prices remain the same. Send 2 dimes for 56-page catalog; worth dollars to anyone interested in poultry. Remember, U. R. Fishel's White Plymouth Rocks will more than please you, for they are conceded everywhere to be the

"BEST IN THE WORLD"

U. R. Fishel : Box A : Hope, Indiana

Eggs for Hatching: \$8 per 15, \$15 per 30, \$25 per 60

Refner's White Rocks

Utility and Beauty Combined—I have a few choice cockerels and pullets at right prices considering quality. Also have for sale first, second and third cock birds at the big Peoria show, December 14 to 18, 1909. If you are looking for quality at right prices, I am there with the goods.

C. C. Refner, South Bartonville, Peoria, Illinois

MOORE'S S. C. W. LEGHORNS

Day-old chicks 10c each. Book orders now. Our exhibition matings are unsurpassed in shape, color, carriage and spread of tail. Eggs for hatching at bargain prices. Do not order elsewhere until you have seen our free mating lists—ready February 1st. Stock for sale.

Moore Bros., Moscow, New York

PARSON'S

Barred Plymouth Rocks

WIN FIRST PRIZE WHEREVER SHOWN—Our original stock was selected from one of the most noted prize winning yards in the country, and by careful selection and mating we have produced a strain that is not excelled anywhere. Under such judges as I. K. Felch, our birds in competition score from 90 to 95½ points. 400 BIRDS FOR SALE, of the very choicest quality. Birds that win in the strongest competition: birds that will produce winners. We guarantee every bird to be as described or money refunded. This guarantee is what our business is founded on. Write today for what you want and mention American Poultry Journal.

CHARLES PARSONS & SON : : CONWAY, MASSACHUSETTS

S. C. Reds

Have fifty utility pullets for sale cheap. No more cockerels for sale. Am now booking orders for eggs from pens mated to produce that ideal shape for which my stock is noted. Write me before placing your order elsewhere and mention American Poultry Journal.

H. T. Marshall, R. R. No. 53, Sheridan, Illinois

Orpingtons

SINGLE COMB BLACK—Just a few cocks, hens and pullets left. My sale of birds bred from Madison Square Garden winners has been a splendid success. Remaining birds at special prices. Write for particulars.

H. F. KENNERK R. F. D. No. 7 FORT WAYNE, INDIANA

CONDIT'S WHITE ROCKS

Lead all again at Chicago, the largest show in the West. They win again in the most coveted prizes, including first cock, first and fourth hens, second cockerel, second pullet, second pen and two specials for best cock and hen. If you wish birds to win in the winter shows I am prepared to furnish them. Send for free catalogue.

P. B. Condit, 2138 N. Capitol Ave., Indianapolis, Ind.

KING BROTHERS OSHKOSH, WISCONSIN

breeders of the world renowned "Ringlet Strain" Barred Plymouth Rocks. The best in the world. Beautiful catalogue for the asking. Please mention American Poul. Journal. (Bear in mind we have devoted our whole time and energy to perfecting this one breed for twelve years. We back our statements by paying return charges on any bird bought of us at \$10.00 or over if you are not satisfied.)

The FAMOUS **PEERLESS**

Incubators and Brooders

MORE than 30,000 in successful operation in all parts of the world. Guaranteed to hatch and raise the largest percentage with less attention and less expense than any other make. The Famous Peerless Incubators and Brooders possess many special and exclusive features, such as **automatic ventilation and moisture, heat distributing bars, Tandem Thermostat Regulator, Automatic Lamp, Safety Burner, with combined damper and flame regulator, saving half the time, labor and cost of operation.**

Either Knock Down or Ready for Operation

I am now prepared to furnish these machines complete and ready for use, as well as in knock down form. **Take your choice.**

My Acme Lamps and Burners are **safe within themselves** and require no fire proof housing or other safety appliances. They were **safe** when I put them on the market years ago, they are just as **safe** today, and will be **safe** for all time to come.

TANDEM DOUBLE-COMPOUND THERMOSTAT

Acme Burners fit any lamp. Tandem Thermostat fits any regulator. I furnish all attachments for connecting to both damper and flame controller. I make complete regulators to fit any incubator; also complete lamps. **My Acme Automatic** is the finest Lamp on earth. Has large oil reservoir, seldom needs filling; automatic feed keeps oil always same height on wick, insuring uniform flame, even heat. Acme wicks are double thickness, need no trimming; no smoke, no soot, no overheating the burner. These appliances are readily attached to any incubator on the market, and will repay their cost in a short time.

My Acme Alcohol Burner is a new creation—burns denatured alcohol, the new fuel, clean, economical, smokeless and odorless. **Absolutely safe.** Burns a beautiful blue flame that is always under perfect control, requires no attention and is positively fire proof. No fumes to kill the little chicks in brooders.

My Lamplless Brooder

No lamp, no tank, no expense to operate, yet it raises chickens like the old hen. Thousands in successful operation.

I manufacture a complete line of Incubator and Brooder Supplies and Fixtures, everything to repair or remodel your old machines, or to build new ones. My Lamps, Regulators, Tanks, etc., are made to fit all makes of Incubators and Brooders. I will also make up to order anything special you may want in my line.

My Combined Catalog and Book of Plans is the finest book of the kind ever published. It fully illustrates and describes my Famous Peerless Incubators and Brooders, together with my complete line of Lamps, Regulators, Tanks and other incubator supplies and fixtures. Contains more than 100 photographic

illustrations, showing, step by step, how the Peerless Incubators and Brooders are constructed, and how you can easily build them yourself. These plans are so simple and the instructions so complete that anyone, even a 12-year-old boy, can follow them and do the work. Whether you build it yourself, or buy it ready made, you will have the satisfaction of knowing just how Famous Peerless Incubators or Brooders are constructed.

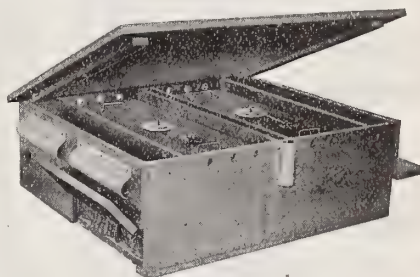

I will send you this handsome catalogue and book of plans absolutely **FREE**. Send for it today, right now before you forget it, and remember, if you trade with me, both you and I will be making money, and if you don't trade with me, we **both lose**. It's up to you. Address

KITSELMAN BROS., Box 295, MUNCIE, IND.

BROWN POULTRY FENCE

Does Not Cost One-Half as Much as Common Chicken Netting, Yet Will Last Five Times as Long

Size of Wires. The top wires are No. 9 1/2 gauge—same as nearly all stock fences. Intermediate and stay wires in same proportion—all double strength high carbon spring steel wire.

One Inch Spacings. More closely woven by far than other poultry fences, because bottom wires are only one inch apart, balance in same proportion—absolutely chick tight and rabbit proof.

Stock Strong. Built of material heavy and strong enough for hogs, horses and cattle. Wires cannot possibly slip, sag or bag down.

Rust Proof. The double galvanizing of every pound of wire in Brown Poultry Fence insures the fence against rust for many years.

Saving in Cost. With No. 9 1/2 top wires, you can save at least one-half the posts, and besides you require no top railing or bottom boards. These items alone usually cost more than the fence.

Price. Our prices are less than common netting costs. Before buying any poultry fence, get our catalog and prices. We have 160 styles of fences to select from.

For a poultry proof fence woven close enough to confine small chicks yet strong enough for cattle, this fence cannot be equalled anywhere or at any price.

Write for An Actual Sample of Page Fence—FREE!

Let us send you an actual sample of Page Woven Wire Fence and our valuable Quarter Centennial Catalog Free. See the real Page Wire! Examine the method of weaving the wonderful Page Knot—the Knot that can't come off! Study the many styles of Page Fence and the Panorama of Pictures showing extreme tests which this splendid fence withstands. Read how, in our great mills and factories, we put elasticity, tensile strength and durability into High-Carbon, Basic Open Hearth Steel Wire. Learn what this means in economy.

Five Times the Durability of Ordinary Poultry Fence

Does away with the use of boards required for netting or ordinary poultry fence. The heaviest stock cannot break through it. Keeps poultry safe from prowling animals. Bottom wires set closely together, safeguarding the smallest chicks. It's the easiest and most economical fence to put up. Has many times the serviceability of ordinary poultry fence and twenty times the life of netting.

The steel from which Page Fence is made is 50 per cent stronger than common Bessemer Wire, and the galvanizing is 50 per cent heavier. Page Fence saves posts, nails, staples and labor, because its stiff, strong, coiled spring, horizontal wires support themselves over a long span. The actual saving is 50 or more posts every 100 rods.

Specified by U. S. Government as standard of quality. Approved by a million farmers.

IDEAL POULTRY LAND

NEAR ATLANTIC CITY, N. J.

Handy to best markets in the country, because 12,000,000 people are within 150 miles of this property

Excellent transportation on two main-line railroads and state boulevard, which give quick, convenient access to the great Jersey seashore resorts, and New York, Philadelphia, Baltimore and Washington.

Location and other natural advantages are not excelled anywhere. Climate is mild and healthful. Plowing was done in this locality during every month last winter. Winter eggs and early broilers bring highest prices in the markets.

Berries, fruits and vegetables can be produced with good success, insuring an income from the land during practically the entire year.

Large manufacturing town and navigable river nearby. Title insured. White people only. Booklet free. Write today.

F. M. Clemens—1st, 2d, 3d cocks; 1st, 2d, 3d, 4th on hens, cockerels and pullets.
Pens—Clemens, 1st; Mrs. R. A. Judy, 2d, 3d.

Partridge Plymouth Rocks—18 in Single Class.

Cocks—S. A. Nofztger, 1st, 2d, 4th; James Lamkin, 3d, 5th.

Hens—Nofztger, 1st, 2d, 3d; Lamkin, 4th.
Cockerel and pullets—Nofztger, 1st, 2d, 3d, 4th.

Pen—Nofztger, 1st.

Silver Wyandottes—41 in Single Class.

Cocks—Clare E. Hoffman, 1st; A. & E. Tarbox, 2d, 3d, 4th, 5th.

Hens—Tarbox, 1st, 2d, 4th, 5th; Jacob Miller, 5th.

Cockerels—Tarbox, 1st, 2d, 4th, 5th; Hoffman, 3d.

Pullets—Tarbox, 1st, 2d, 3d; Hoffman, 4th; Miller, 5th.

Pens—Tarbox, 1st, 2d; W. H. Doran, 3d; C. F. Schroder, 4th; Miller, 5th.

Golden Wyandottes—61 in Single Class.

Cocks—J. H. McDaniel, 1st; Robert Gamber, 2d; C. H. Dillon, 3d, 4th; J. S. Pennington, 5th.

Hens—Newton Newsbaum, 1st, 4th; McDaniel, 2d; Dillon, 3d, 5th.

Cockerels—Dillon, 1st; McDaniel, 2d, 5th; Gamber, 3d; Pennington, 4th.

Pullets—Simmons Bros., 1st, 5th; McDaniel, 2d; Pennington, 3d; Gamber, 4th.
Pens—Dillon, 2d.

White Wyandottes—120 in Single Class.

Cocks—M. F. Morris, 1st; Gala Poultry Plant, 2d; Harry L. Shults, 3d; Ralph E. Bettles, 4th; T. T. Todd & Son, 5th.

Hens—H. J. Smith, 1st, 2d; Shults, 3d; Gala Poultry Plant, 4th, 5th.

Cockerels—Howard S. Lytle, 1st; J. W. Andrews, 2d, 4th; W. E. Fowler, 3d; Wm. A. Peterson, 5th.

Pullets—George F. Schmidt, 1st; Morris, 2d; Andrews, 3d, 4th; Peterson, 5th.

Pens—Morris, 1st; Gala Poultry Plant, 2d; Lytle, 3d; I. M. Armstrong, 4th; J. H. Jackson, 5th.

Buff Wyandottes—48 in Single Class.

Cocks—Simon Beuth, 1st, 2d; C. E. Coe, 5th.

Hens—Beuth, 2d, 3d; Stuart A. Howland, 4th; Hartman Stock Farm, 5th.

Cockerels—C. A. Balcom, 2d; Beuth, 4th, 5th.

Pullets—Beuth, 2d; Balcom, 3d.

Partridge Wyandottes—61 in Single Class.

Cocks—W. A. Doolittle, 1st, 2d; Dr. C. M. Baskerville, 3d; Wm. Erfurth, 4th; C. E. George, 5th.

Hens—Erfurth, 1st; George, 2d; Baskerville, 3d; August Bloese, 4th; Doolittle, 5th.

Cockerels—Doolittle, 1st; George, 2d, 4th, 5th; Bloese, 3d.

Pullets—Hartman Stock Farm, 1st; George, 2d, 4th; Doolittle, 3d; Baskerville, 5th.

Pens—Melvin H. Coffin, 1st; George, 2d; Doolittle, 3d; Hartman, 4th; Martin Foley, 5th.

Columbian Wyandottes—41 in Single Class.

Cocks—Dr. H. M. Jordan, 1st, 2d; Walter G. Fenton, 3d; Don R. Doolittle, 4th, 5th.

Hens—Fenton, 1st, 3d, 5th; C. H. Dillon, 2d; Jordan, 4th.

Cockerels—Fenton, 1st, 3d, 4th, 5th.

Pullets—Fenton, 1st, 4th; Doolittle, 2d, 5th.

Pens—Fenton, 1st.

S. C. Rhode Island Reds—178 in Single Class.

Cocks—Lester Tompkins, 1st, 4th; Ira M. Crowther, 2d; J. J. Blake, 3d; Ellenwood Poultry Farm, 5th.

Hens—Tompkins, 1st, 3d, 5th; Ellenwood, 2d; C. L. Baker, 4th.

Cockerels—Tompkins, 1st, 2d; Ellenwood, 3d; Crowthers, 4th; George Van Dewee, 5th.

Pullets—Tompkins, 1st, 2d; T. J. Rountree, 3d; A. Elagie, 4th; Ellenwood, 5th.

Pens—Tompkins, 1st; Mrs. Frank G. Davis, 2d; Ellenwood, 3d; Crowthers, 4th; Chris Dahlgard, 5th.

Rose Comb Rhode Island Reds—155 in Single Class.

Cocks—C. L. Buschman, 1st; Irving A. and Frank C. Sibley, 2d, 5th; Tompkins, 3d; A. W. Blanchard, 4th.

Hens—R. C. Tuttle, 1st, 3d; Buschman, 2d; Tompkins, 4th; F. L. Ober, 5th.

Young's Strain S. C. White Leghorns

I Have No Other Breed

I have won more prizes at Madison Square Garden, New York, in the last ten years than all others combined. My winnings at Madison Square Garden, season 1908-9, were as follows:

First, second, third and fourth cock. First, second, third and fourth cockerel. First, second, third and fourth hen. First, second, third and fourth pullet. First pen.

The President's Silver Cup, and every other special offered.

You cannot win without my strain. Every bird that won at Madison Square Garden this year was directly from my yards, or from my strain, excepting one pen.

They have been the leading winners for thirty years in America's greatest shows from the Atlantic to the Pacific coast.

It is the most prolific laying strain on earth and has been in hundreds of laying contests all over the world, and has not yet been defeated.

Mating lists free. Stock and eggs for sale at all times.

D. W. Young BOX 1-A Monroe, N. Y.

"The Famous American Beauty Strain"

R. C. Rhode Island Reds

Winners at Madison Square Garden, N. Y., Chicago, Indianapolis, the Jamestown Exposition, St. Louis, Augusta, Trenton, Allentown, Nashville, Montclair, Paterson, Scranton, Rutherford, Morristown, Dover, Englewood, Newark, Sacramento, California, and the Alaska-Yukon Pacific Exposition. Hundreds of grand birds for sale at prices that are right. Mention American Poultry Journal when writing.

Kaufmann & Windheim, Originators

:: The Largest Exhibitors of Reds in America

:: Nutley, New Jersey

Cockrels—Tuttle, 1st, 4th; Ellenwood Poultry Farm, 2d; Matbey & Shelley, 3d; Buschman, 5th.

Pullets—Ellenwood, 1st; Tuttle, 2d; Myron B. Seward, 3d; Buschman, 4th; Tompkins, 5th.

Pens—Tuttle, 1st; Tompkins, 2d; Buschman, 3d; Robt. H. Airey, 4th; Ellenwood, 5th.

Light Brahmas—20 in Single Class.

River Home Poultry Yards, 1st, 2d, 3d, 4th and 5th on cock, hen, cockerel and pullet and 1st pen.

Dark Brahmas—7 in Single Class.

Cocks—Dr. S. Lott, 1st; C. Donald Gay, 2d.

Cockerels—Kakuska, 1st; Tecktonius, 3d; Boetteher, 5th.

Pullets—Bean, 1st; Tecktonius, 2d, 4th; Kakuska, 3d; Guy Pedroy, 5th.

Pens—Tecktonius, 1st; Boetteher, 2d, 3d.

Single Comb Mottled Anconas.

Dr. Guy Blencoe, 1st, 2d cockerel; 1st, 2d, 3d pullet.

SPECIAL NOTICE

We are glad to announce that Mr. John H. Moore, formerly Superintendent at Castle Farm and the originator of the celebrated "Castle Farm Strain" of White Wyandottes, has become Manager of our plant.

We are constantly selling guaranteed show birds in both our White and Col. Wyandottes, and will furnish single birds, pairs, trios or pens at a more reasonable figure now than later.

R. C. Caldwell : Box 1021 : Lyndon, Ross County, Ohio

second the motion," said Jackson's hen from out of her pen.

Lloyd Misher went home with more money than what he had when he came.

What fools some mortals be to go to a poultry show without their lunch. The "eats" was about as measly as the "Hambergers" at the Indiana State Fair.

The man with better birds at home was absent. He sold his birds to the butcher. Likewise the man who didn't advertise.

"No smoking allowed," yet the competition was sizzling red hot.

Especially in Columbian Wyandotte alley was this noticed.

Walter Fenton scraped the platter in this variety. He has the goods.

OUR CHICAGO WINNERS.

The following list contains some of the prominent winners at the recent Chicago show, whose birds are worthy of special mention and whose ads are to be found in the columns of the American Poultry Journal:

The exhibit of the River Home Poultry Yards, Perrysburg, Ohio, was commendable and filled with quality throughout. In the Light Brahma alley they won every prize competed for. These birds exhibited by them were all of that grand, majestic type and style found only in the good old Light Brahma, and when bred close to standard requirements, as the River Home people breed them, they are surely one of the most majestic and beautiful birds we have today.

The third prize Barred Rock cock, which plum also fell to the River Home Poultry Yards, was a very fine specimen, with fine barring and typical Rock type.

Covert's Barred Rock Farm, Wil-

loughby, Ohio, exhibited a fine string of Barred Rocks at Chicago and were among the winners, capturing second hen, third cockerel, third pullet and second pen. His birds showed quality throughout, particularly his string of females.

Truckenbrod Bros., Mendota, Ill., also exhibited some high class Barred

hibited Barred Rocks and won second cockerel, second pen mated for cockerels and first pen mated for pullets. The Barred Rock class was a large one and contained quality throughout. Many a fine specimen that most any breeder would be glad to own was left out of the winnings.

In the White Rock class we desire

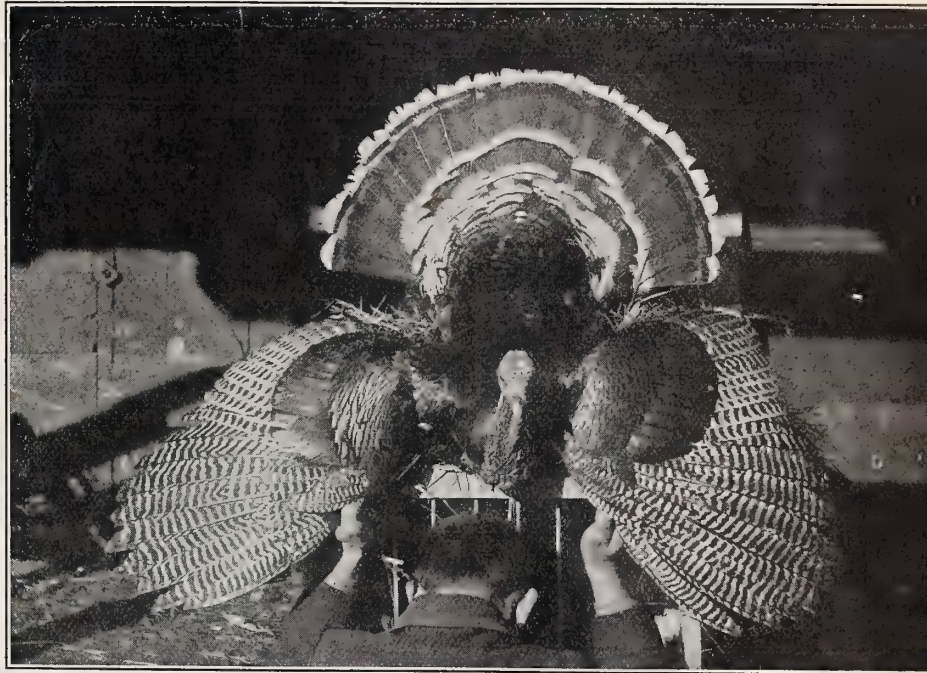

Photo of a first prize winning Bronze turkey cock at the Madison Square Garden show, showing fine wing barring, snow white edging and beautiful bronze. This bird was bred and exhibited by Bird Bros., of Myersdale, Pa., the Bronze Turkey and Partridge Wyandotte specialists.

Rocks and won fifth cock, fifth hen and fourth pen. Here again we find good quality, and Barred Rock breeders will remember that Truckenbrod Bros. have been in the winnings at Chicago before.

Keim & Niles, Bethany, Ill., also ex-

to mention W. H. Halbach, Waterford, Wis., who showed a fine string of White Rocks and won third and fifth cocks, second and fifth hens, first cockerel, fourth and fifth pullets and first pen. It will be remembered that Mr. Hal-

Fashion's Proudest Birds are "Ringlets"

E. B. Thompson's Barred Plymouth Rocks

are identical to success in Barred Rock breeding; they combine all the great qualities of size, style, shape, heads, barring and color which have made the "Ringlets" America's Leading Strain.

Their conquest of Madison Square Garden, New York, for more than 20 years is familiar to every Barred Rock fancier throughout the Civilized World. The record stands alone and puts all others in eclipse—it is the most remarkable in the annals of poultry shows.

My producing the beautiful "Ringlet" feathers on Barred Rocks is recognized as having passed far beyond the realm of experimental theory. I never had so many superior exhibition and breeding birds—both male and female—with which to supply my customers all over the world as now. And all fanciers who visit my farm declare the stock is a revelation in the science of Barred Rock breeding. I can furnish you any birds you may want at reasonable prices and will assure exceptional value. Will mate to produce winners if desired.

The "Ringlets" are known in every land and play their part in the commerce of the world

Winners of Special Prize for Best Pen mated to produce Exhibition Cockerels, at Madison Square Garden, New York.

My matings for eggs are the world's finest, and prices are as usual: One setting \$6; two settings \$11; three settings \$15; four settings \$18; 100 eggs \$30. New 58-page catalogue, full of pictures of New York winners from life, will be mailed upon application.

WHITE ROCKS**AND WHITE WYANDOTTES**

If you are interested in these varieties and want quality birds for show or breeding, write us for prices. We have the birds that are bred right and raised right. These two essential features we can swear to as we RAISE the birds we sell on our farm. For proof of the quality look at our winnings at the Tri-State Fair, Memphis, Tennessee, 2,500 birds competing. On White Rocks every prize competed for, also special best cockerel in show, also best pullet in show. Purina Mills' cup best pen of Rocks. On White Wyandottes four out of five firsts and all other prizes competed for. \$100 gold best fifteen birds any variety in show. Como Mills' cup best pen of Wyandottes. We guarantee satisfaction on every sale.

W. R. GRAVES :- MRS. S. H. GRAVES
Rockandotte Farm, R. 3, Southboro, Mass.

bach was the prominent winner in this class at Chicago last year, and these winnings simply demonstrate a gain in quality of Rocks bred by Mr. Halbach.

Another important winner in the White Rock class was Preston B. Condit, 2138 North Capitol avenue, Indianapolis, Ind., who won first cock, first and fourth hens, second cockerel, second pullet and second pen. Mr. Condit has been the important winner at the Indianapolis shows for several years, and breeds White Rocks of high quality.

Another winner in the White Rock alley was J. H. Trobaugh, Delphi, Ind., who won fourth cock and third hen. Mr. Trobaugh is not a large breeder, but he seems to be breeding quality, just the same.

One of the exhibits which attracted the particular attention of the public and was even much commented upon by many of the breeders of other varieties, was the Partridge Plymouth Rock class, and particularly the birds exhibited by S. A. Nofztger, North Manchester, Ind., whose birds were typical Rock type and

WHITE WYANDOTTE.

A prize winner. Bred and owned by Ira C. Keller, Prospect, Ohio.

had that beautiful penciling so much desired. Mr. Nofztger will be remembered as the originator of this variety and he has certainly perfected these beautiful birds to such an extent that they are now as easy to breed as any of our older varieties. His winnings in this class were first, second and fourth cocks; first, second and third hens; first, second, third and fourth cockerels; first, second, third and fourth pullets, and first pen.

The Golden Wyandotte class was the largest class of Golden Wyandottes we ever saw at Chicago, and contained quality throughout. The prizes were divided among the exhibitors as follows: J. H. McDanell, Warsaw, Ky., won first cock, second hen, second and fifth cockerel and second pullet.

Simmons Bros., Stockton, Ill., won the first prize pullet, also winning two fine silver cups. This was a very beautiful specimen and showed the highest possible production in this variety. C. H. Dillon, 4231 Turrill street, Cincinnati, Ohio, won third and fourth cocks, third and fifth hens, first cockerel and second pen.

George H. Rudy, Mattoon, Ill., breeder of White Wyandottes, did not enter for competition in this class this

year, but had an exhibition and very beautiful display of this popular variety which was much admired by every one. One coop contained his cock bird "Perfection," winner of thirteen prizes in thirteen shows, this bird never having been defeated. There was always to be found a crowd of interested spectators around this coop as well as the rest of Mr. Rudy's exhibit.

J. H. Jackson, Hudson, Mass., exhibited a very fine pen of White Wyandottes on which he won fifth place. J. W. Andrews, Dighton, Mass., also exhibited White Wyandottes, and on four entries he won second and fourth cockerels, third and fourth pullets, and color special on females. Mr. Andrews' birds have been prominent winners at the New York and Boston shows for many years.

The Columbian Wyandotte class was very large and was evidence of the high quality which it is now possible to breed of this beautiful variety. The exhibit of Walter G. Fenton, Mt. Clemens, Mich., was very fine and he succeeded in capturing the following

erel; first and second pullet, and first pen.

In Rose Comb Rhode Island Reds, C. L. Buschman, 4939 North Meridian street, Indianapolis, Ind., had a fine string of birds, winning first cock, second hen, fifth cockerel, fourth pullet, and third pen. Mr. Buschman also had an exhibition pen which contained a number of very fine specimens and were much admired by the public.

Messrs. Irving A. and Frank C. Sibley, South Bend, Ind., had some very fine birds in the Rose Comb class and were awarded second and fifth cocks. Messrs. Sibley's birds are fine specimens of Rhode Island Reds and have been prominent winners in many shows for a number of years.

Ira M. Crowther, Willoughby, Ohio, won second cock, fourth cockerel and fourth pen. The birds exhibited by Mr. Crowther were young and not yet fully matured, but showed exceptional quality, and had the show been a month later we think his birds would have landed higher up in the winnings. His exhibit showed quality throughout.

THE VALUE OF CHARCOAL IN POULTRY RAISING

BY J. C. NUCKOLS

You know chickens need charcoal to keep them well. But did you know there are two kinds of chicken charcoal? One is once-burnt; the other is re-carbonized—twice-burnt. Mr. Nuckols' booklet tells the facts about both kinds. It also gives ideal feeding plans for laying stock—plans whose success has been demonstrated by practical poultrymen. Send us your name and address, with the name and address of your poultry supply dealer, and we will mail you a copy of this booklet, free of cost.

CHAMPION BROODERS

Our 1910 model is the best and finest brooding device ever put on the market. Outdoor, indoor and lampless brooder, weaning coop and small colony house, all combined in one machine for less money than you pay for just "brooder" in other makes. The Champion is the standard Brooder of the world. We have customers using as many as 50 on their farms. No other brooder like it.

Champion Patents

Many manufacturers are using some of our patented features in their brooders. Beware of these infringements as we intend to prosecute all such manufacturers and users of infringing brooders. Our patents cover all two compartment brooders, others are infringements, and if you buy them you are liable to heavy damages.

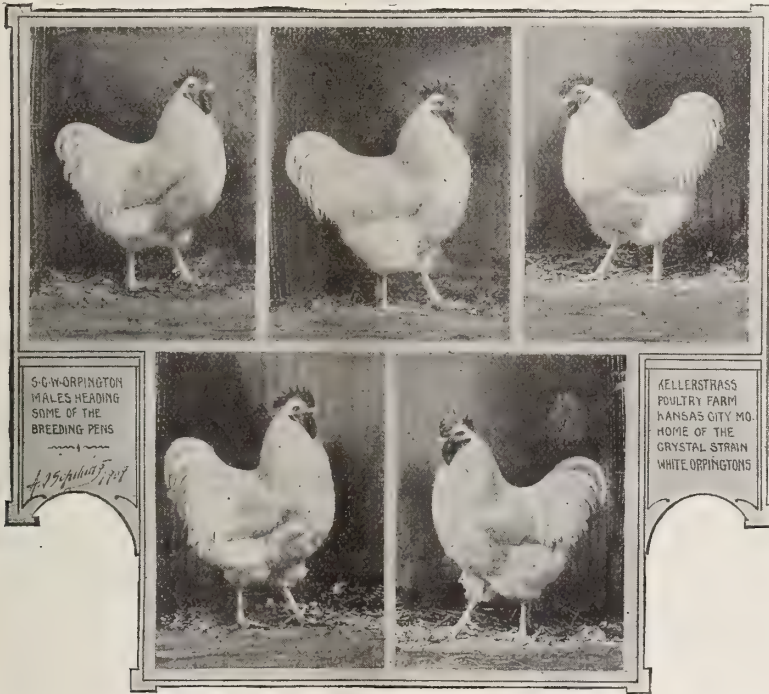

How They Work

"I have used two other kinds, but yours beats them all."—Jos. McCloskey, Watseka, Ill. "My Champion raised 145 chicks for me without the loss of one."—E. U. Harris, Hagerstown, Md. "Never had a chick sick with weak legs or bowel trouble in the Champion."—Nick Morris, Goshen, Ind. "I raised 600 chicks in two Champions last year and lost only three chicks."—R. Robetts, Boston, Mass. "My Champion chicks grow like weeds. Keep the brooders outdoors all winter."—Jas. Shiner, Augusta, Me. We have hundreds of others on file.

The Champion is the only brooder which will work outdoors in winter without shelter. The powerful heater does it. Uses one-half the oil others use. Don't buy until you get our catalog; it's free.

prizes: Third cock; first, third and fifth hens; first, third, fourth and fifth cockerels; first and fourth pullets, and first pen. These winnings in competition of this kind stamp Mr. Fenton's birds as having quality, and we understand Mr. Fenton has a large lot of this variety.

The next class we desire to mention is Rhode Island Reds. The birds certainly were red, and some of the breeders were redder when the ribbons were up; but, be that as it may, the Rhode Island Red class was not only the largest in the show, but here were to be found more interested and enthusiastic people than anywhere else in the show room. The class showed exceptional quality throughout, and many indeed were the fine specimens which were behind the money.

In the single combs, Ellenwood Poultry Farm, Hatboro, Pa., won fifth cock, second hen, third cockerel, fifth pullet and third pen. Lester Tompkins, Concord, Mass., won first cock; first, third and fifth hens; first and second cock-

Jesse T. Bateman, Waverly, Ill., exhibited a fine string of Black Langshans and succeeded in capturing seven prizes. It will be remembered that Mr. Bateman has been a winner in this variety for several years past.

The Single Comb White Leghorn class was very large and contained many beautiful specimens of this variety. The important winner was N. P. Easling, Pekin, Ill., who won first, second and third cocks; first, second and third hens; second, third, fourth and fifth cockerels; first, second and third pullets, and first pen. It will be remembered that Mr. Easling was a large winner in this class last year—in fact, that he has been winning the cream of the prizes at many of the important shows during the last several years.

Huber Bros., Kenosha, Wis., exhibited White Leghorns and won fifth cock, fourth and fifth hens, first cockerel and third pen. Their first prize cockerel was a very fine specimen of this variety.

The Single Comb Brown Leghorn class was, we understand, the largest class of

this popular variety ever exhibited at Chicago, and contained quality from beginning to end. W. H. Wiebke, Fort Wayne, Ind., won first and second cocks and first and fifth cockerels. These were truly remarkable specimens and much admired by the breeders of this variety. Mr. Wiebke has been an important winner in this class at New York, Boston and Chicago during the many years he has been breeding Single Comb Brown Leghorns.

One of the surprises of the show was the number and quality to be found in the Single Comb Buff Leghorn class, in which Fred Tecktonius, Racine, Wis., won the cream of the prizes, as follows: Fourth cock, first and second hens, second and fourth cockerels, first and fifth pullet and first pen. The birds exhibited by Mr. Tecktonius were all that soft, even buff color with the proper Leghorn type, and were much admired by breeders of this variety. He also exhibited Rose Comb Buff Leghorns and won first and second cock, first and second hens, third cockerel, second and fourth pullet, and first pen. We were surprised at the quality to be found in the Rose Comb class. In many ways these birds are now bred equal to the Single Combs. Mr. Tecktonius has a large poultry plant at Racine which is devoted exclusively to producing high quality Buff Leghorns in both Single and Rose Combs.

Another winner in the Buff Leghorns was Peter S. Hurt, Thorntown, Ind., who won third hen, third and fourth pullets, and second pen. Mr. Hurt has been breeding high class Buff Leghorns which have been winning the "blues" at many of our large shows for a number of years past.

L. M. Ranker, Tiffin, Ohio, exhibited Buff Leghorns and won first cock, first cockerel and second pullet.

The important winner in the Single Comb Black Minorca was Charles H. Pape, Fort Wayne, Ind., who won first and second cocks, third hen, fourth and fifth pullet, and first pen. Mr. Pape has been an important winner in this variety for many years past, and his birds were grand, large specimens having typical Minorca type and close up to standard requirements.

The Rose Comb Black Minorca class was very large, and the important winnings went to Lloyd C. Mishler, North Manchester, Ind., who won first, second, fourth and fifth cocks; first, third and fifth hens; first, second and third cockerels; first and fourth pullets, and first, second and third pens. Mr. Mishler will be remembered as an old and prominent breeder of Rose Comb Black Minorcas, and he has always won the cream of the prizes wherever he has exhibited.

An exhibitor who won in both the Single and Rose Comb Black Minorca class was A. Diedrickson, Whitewater, Wis., and won in Single Combs fourth and fifth cocks; first, second and fifth hens; first, fourth and fifth cockerels, and second and third pullets; and in Rose Combs he won second and fourth hens, fifth cockerel, and second and third pullets.

The Buff Orpington class was well filled and attracted general attention. A. E. Martz, Arcadia, Ind., won second and third cock, fifth hen, first cockerel, and first pen. These winnings speak well for the quality of Mr. Martz's stock.

John O. Willard, Linden, Mich., won

second and third hens, fifth cockerel and fifth pen on very fine specimens in this class—in fact, his entire exhibit contained birds of high class Orpington quality.

In the Single Comb Black Orpington class, which contained many very fine specimens, Carl S. Byers, Hazelrigg, Ind., won fourth cock, third cockerel, and first and third pens, and third Buff in the Buff Orpington class. Mr. Byers breeds birds of high quality and is a well and favorably known breeder of this variety.

J. S. Haupt, Easton, Pa., exhibited Single Comb Black Orpingtons, winning third hen, and in Rose Comb White Orpingtons he won first cock and first hen.

The Single Comb White Orpington class was well filled and attracted general attention because of the prominence and interest being taken in this variety at this time, and many were the questions asked, "Is Peggy here?"

Mr. Kellerstrass did not exhibit this year, but attended the show for a couple of days.

The birds exhibited by Lawrence Jackson, Haysville, Pa., were fine specimens of this variety, and he won first cock, second hen and fifth cockerel. Another winner was M. P. Pratt, Evans-ton, Ill., who won second, third and fourth cockerel; fourth hen; and first, third and fifth pens.

In conclusion we will say the Chicago show this year contained the highest quality we have ever seen gotten together, and was a success in every way. The breeders who failed to land in the money this year should not be discouraged but proceed at once to strive to produce better birds.

The New Globe Incubator No. 10

The great merit of the Globe Incubators has been so well known to the poultry raisers of this country for the past fifteen years, that we feel the only introduction that the **New Globe Incubator No. 10** needs is a plain statement of the fact that in this machine we offer to the public an incubator of **Globe merit** built on plans that greatly lessen cost of production so that we are able to offer a

C. C. SHOEMAKER
BOX 605 FREEPORT, ILLINOIS

Notes of the St. Louis Show

Poultrydom is so accustomed to having big things accomplished by Missouri breeders that the early rumor of the size and importance of the Missouri State Show scheduled for Dec. 6-11 at St. Louis was accepted without question. But, unlike many rumored events, the reality far exceeded the anticipation. With over 5,500 birds, exclusive of pigeons, and 550 exhibitors, this show takes rank as the largest ever held in the United States except the show held in St. Louis in connection with the World's Fair. The spacious Coliseum building was filled to its capacity, the main floor being completely covered, and rows of coops filling the extra space under the balconies besides. As every row of coops was double decked, some idea of the immensity of the show can be gained. With a show of this size it was inevitable that some specimens should be exhibited that could hardly be classed as show birds by even the most charitable thought. Yet, allowing a most liberal estimate for the number of birds of this character, there remained a surprisingly large list of specimens good enough to show and win anywhere in America. In practically every class the competition was so strong that even a 5th ribbon means more honor and quality than a 1st at the majority of other shows held this season.

A remarkable feature was the absence of complaint over the judging. Only a few instances came to the ears

of the writer, and these were on minor points. Except in one class, where it was claimed that the judge had not taken a single bird from the coops. If this was so the protest of any exhibitor in the class must necessarily have been sustained by the management, but none was made.

The show was caged by Spratts and disinfected by West. Litter was not allowed to remain on the floor ten minutes, and the absence of confusion at any time would have been remarkable even in a small show.

We were told that the business men of St. Louis, with customary loyalty and enterprise, subscribed \$3,000 to cover the rental of the Coliseum building for the purpose of this show. With the \$4,000 subsidy from the state, the management could afford to take a complacent attitude towards the miserable weather which prevailed during the week and the exhibitors knew that the big premiums won would be in their hands before the show closed, even if the attendance were hurt by the weather. With Tom Quisenberry and his loyal friends to boost the show, in the state as well as outside, with Henry Steinmesch, Judge Henderson and their fellow members on the St. Louis committee to take care of the city, this show was certain to be the big success of 1909-1910 which it turned out.

If anything more was needed to make good the claim of St. Louis to the next meeting place of the American Poultry

Association, as urged by Henry Steinmesch and agreed to by most all western members, the fact can be stated that over 100 members of the American Poultry Association were present at this show and that during the show thirty-seven applications for membership were handed in. Perhaps there were more, but this was the last figure given to the writer before leaving. If this does not spell enthusiasm and enterprise, what does? Secretary Campbell was present the last two days and thereby helped to keep the ball rolling. The management furnished to each member of the American Poultry Association a button bearing the legend, "St. Louis to the Front," with red and white ribbons pendant, upon which were printed "Member American Poultry Association." This made it easy for the old and new members to identify one another and get together, and is one of many evidences of the courtesies shown to visitors.

To return to the birds. All classes were judged by comparison. Billy Russell had the ribbon up on Barred Rock cocks and hens before lunch time on Monday, the opening day of the show. This was the largest class in the show, too, containing 282 birds. One of the finest Barred Rock cocks we have seen took first and would have won anywhere. He had unusual color for a cock, fine, narrow, snappy barring, good strong legs, full breast, long broad back and stood well on his stout legs. If his tail had finished out better he would be hard to criticize. He was bred by Gus A. Lengfelder, Mt. Vernon, Ill., whose entire exhibit showed a uniformity of size, vigor and quality that is

2,000 World's Best White Wyandottes

Why We Make This Claim

1. Because we have proven to the poultry world that our strain of Wyandottes are the most profitable found, whether used as fancy or utility. They surpass all other breeds.

2. Our own show record warrants us in making the claim of the World's Best. We do not make false claims of making any other strain possible. There is only one World's Best Strain and our care and breeding alone is responsible for it.

3. Our motto has always been "Your money's worth or your money back, and you to be the judge."

4. The breeding of White Wyandottes with us is our exclusive business, and our business is increasing every year. That is proof of our claim.

We Make a Specialty of Furnishing Show Birds

and if you want to win you must secure the World's Best to win the victory, and to secure it you must get it from our yards. We have the finest lot of show birds we ever owned. If you win we will not claim the honors, because you bought the birds and the honor goes with them.

Bargains---Bargains

in breeding and utility birds. We knew that the poultry crop would be short this season; we made preparations for it and today have more birds than ever before. We can give you the best selection and from a larger number of birds than any other breeder of this variety. We have mated our breeding pens and must have room, and if you are in need of show birds that will win, or in need of breeders that will breed winners, or of utility birds that will lay, write us. We can supply your wants at prices that will astonish you; remember, quality considered. We defy competition.

Harry M. Lamon, Adams Center, N. Y.

See my Plymouth Rock ad.

not often found. This same breeder had also one of the best showings of Toulouse Geese that the writer has ever seen, winning 1st and 3d adult goose, 4th adult gander, 2d young gander and 2d young goose. His geese showed same attention to size that characterized his Barred Rocks, the 2d young gander being a wonderfully good bird. M. Guckel, of Kirkwood, Mo., divided the honors in Toulouse Geese with Mr. Lengfelder, showing some unusually strong specimens. Louis Rausch, Creve Coeur, Mo., showed a fine strain of Barred Rocks.

In Buff Rocks there was the strongest line of birds in this variety that has been gotten together in years, with quality to burn. The class contained 271 birds, the second largest in the show and only 11 birds behind the Barred Rocks. Many a good bird was left out of the winnings because there were not enough ribbons to go around. The honors were fairly divided among E. L. Delventhal, Warrenton, Mo.; J. J. Bleakley, Abilene, Kan., and W. S. Robison, Fayette, Mo. Mr. Delventhal landed 2d and 5th cock, 3d, 4th, 5th hen, 2d pullet and 4th pen, and his entire string was a galaxy of quality. J. J. Bleakley won 4th cock, 1st, 3d, 4th cockerel, 1st pullet and 3d pen. His 1st cockerel was in a class by himself, showing rarely good Plymouth Rock type and one shade of golden buff from head to tail. W. S. Robison captured 1st pen on a well matched quartet of females headed by a splendid male. Mr. Robison also took a fourth on pullet.

There is no use talking, Eastern breeders of Buff Rocks will have to come West for this quality if they are to keep abreast of the times.

There was a hot fight on in White Plymouth Rock alley, 209 birds being shown. The ribbons were well distributed, only an occasional instance showing more than one to the credit of any one exhibitor. J. A. Bickerdike, of Millersville, Ill., was, as usual, one of the best winners, taking down 1st and 4th pens, 3d cockerel and 5th pullet. His 1st pen was headed by the cockerel winning 1st at the last Illinois State Fair. Judge Russell was especially complimentary concerning the type of the females in this pen as well as the correctness of the mating. Eggs from this pen will be worth much to fanciers seeking progress. Mr. Bickerdike also made a killing in White Holland turkeys, winning 1st old tom, 1st, 2d hens. The five winning hens in the class were pronounced by Judge Pickett to be the best in America. J. C. Rickey, Clarence, Mo., won 1st on a splendid pullet. He also showed a cock that a prominent Connecticut breeder and exhibitor of the variety at Madison Square pronounced to be the best bird in the class. He would have been a certain winner if shown a month later, as he was not properly finished for this early show. We understand that Mr. Rickey will sell a few eggs from the pen headed by this bird, and they will be worth any price he asks, for he has equal quality in his females.

Partridge Wyandottes constituted the strongest class of this variety that the writer has seen for years at any of the big shows. Carver & Avey, Columbus City, Ind., won the lion's share in spite of the strong competition, drawing 5th cock, 2d, 3d, 4th hen, 1st cockerel, 1st, 2d pullet and 1st pen, one of the best winnings in the show.

In Columbian Wyandottes Henry

Steinmesch, Normandy, Mo., proved the quality he is breeding by winning, in a large class, 3d, 5th cock, 1st hen, 3d cockerel, 3d pullet and 3d pen. His 1st hen was an unusually good female, fine tail, wing and hackle, and a typical Dotte.

Golden Laced Wyandottes furnished some top notch specimens, Simmons Bros., Stockton, Ill., winning 1st, 3d and 5th pullets out of four entered by them, 64 birds in the class. Buff Wyandottes about the same in number and some excellent quality, particularly in color. J. C. Ritter & Son, Olney, Ill., were the best winners, capturing 1st, 3d hen, 3d cockerel, 2d, 5th pullet and 1st pen. Henry Steinmesch entered but one pen in this class and easily won 3d.

Silver Laced Wyandottes were a big class and a strong one, particularly in the females, 139 birds being shown. Henry Steinmesch was again to the front with 1st and 5th hen and 1st pen. These were deserved on splendid birds, and show that Mr. Steinmesch is more than holding his own in this popular variety.

Silver Penciled Wyandottes found Carver & Avey with decidedly the best of it, winning 1st, 2d, 3d cock, 1st, 2d hen, 1st, 4th, 5th pullet, 1st, 2d cockerel, 1st, 4th, 5th pen, with competition from three states to meet.

Rhode Island Reds, both rose and single comb, made a large showing and there was some extra good quality in females particularly. The winnings were well scattered, many going to comparatively new breeders of these popular varieties. If the Chicago show had not been held during this same week we venture the statement that the complexion of the winnings here would have been decidedly changed, as it was a toss up with many Red breeders as to which show would offer the greater honor. At that, some of the best S. C. Reds we have seen this year were at St. Louis.

Buff Cochins brought out a large entry and hot competition. Dr. A. A. Gossow, St. Charles, Mo., made a splendid showing and a large winning, taking 1st, 2d, 4th, 5th cock, 2d, 3d hen, 3d, 4th cockerel, 3d, 5th pullet and 1st, 2d, 3d, 4th, 5th pen. Wm. A. Koppey took a ribbon on every entry made by him but one, his 1st cockerel standing head and shoulders above the rest.

S. C. Brown Leghorns constituted the largest and strongest class of this variety seen this winter, 140 birds being shown by exhibitors from seven states, one entry coming from Pennsylvania. Tom H. Woods, Fayette, Mo., in spite of this competition, took by far the best of it, and deservedly. He won 5th cock, 1st, 2d, 5th cockerel, 3d, 5th hen, and 1st pen. His quality was consistent in both sexes and this winning alone will bring him all the business he can handle. A breeder of this variety who can produce the quality shown by Mr. Woods has a position among fanciers that is undisputed.

Single Comb White Leghorns showed their popularity by coming out 223 strong, the third largest class in the show. Any winning here spoke volumes for the quality necessary to do it, and when a breeder can pull down two firsts he deserves special mention. Charles H. Rickey, Clarence, Mo., was the fortunate breeder to accomplish this, his winning of 1st cock, 2d hen, 2d pullet and 1st pen standing as the best taken by any exhibitor of this

variety. His 1st cock was a grand specimen, especially true to type and good in color. This winning places Mr. Rickey well up among the leading breeders of this variety. Robert D. Parmenter, Knoxville, Ill., showed a splendid string, his 2d and 4th cockerel coming in for much praise. He also won 2d pen. The 4th pullet shown by Clarence Root, Springfield, Ill., was a well placed bird, nice in head, long back and well carried tail, as well as a very white specimen.

Single Comb Buff Leghorns, a good class, and all the better because of the good entries of M. Guckel, Kirkwood, Mo., and Peter S. Hurt, Thorntown, Ind. Mr. Guckel showed two fine hens, winning 2d and 5th, also 5th pullet. Mr. Hurt by his winning of 1st hen, 4th pullet and 3d pen showed the Western breeders that Indiana can turn out some of the best in this line.

W. O. Chase, Hillsboro, Ill., got the best winning in a good class of R. C. Brown Leghorns, taking 1st cock, 2d, 3d hen, 4th cockerel, 4th pullet, 1st, 2d, 3d pen.

In White Wyandottes one of the old-time successful breeders, George M. Dewey, Keytesdale, Mo., made a good winning in the large class shown. His 1st pen, 2d, 3d pullet and 4th hen made him one of the largest winners. His 1st pen was a splendidly well matched and mated lot.

The Partridge Cochins exhibited by S. W. Cooper were in a class by themselves, and deservedly won the lion's share. He won 1st, 3d, 4th cock, 1st, 2d, 3d, 4th, 5th hen, 2d, 3d, 4th, 5th cockerel, 1st, 3d, 5th pullet and 1st pen. Mr. Cooper succeeded to the celebrated Baldwin strain of Partridge Cochins, which has a record back to 1882 of wins at all the big shows from New York and Boston to Kansas City. This quality showed all through his entry at St. Louis and was responsible for his remarkable win.

Single Comb White Orpingtons furnished plenty of competition, 114 birds being entered. J. W. Jones, Brookfield, Mo., made a splendid winning in this class, in fact, one of the best in the show. He took 1st and 4th hens on two typical Orpingtons, excellent in size, shape and color, 5th cockerel on a large deep bodied bird who ought to make a record at the head of a pen as a producer of winners. His 1st, 3d and 4th pullets were well placed and on a par with his other winners. With 1st and 3d pen also to his credit, Mr. Jones can congratulate himself upon having made a record that will stand for years. His egg customers will indeed be fortunate.

In Single Comb Buff Orpingtons, 178 birds entered, A. H. Eldridge, Bradford, Ill., made an unprecedented winning, especially considering the number and quality of the birds which his entries encountered. He won 1st cock, 1st hen, 1st cockerel, 1st pullet and 3d pen, showing grand quality right down the line. These winnings were conceded by his competitors as well deserved and the writer overheard a number of favorable comments by observing judges on the quality of Mr. Eldridge's exhibit. We believe there are few breeders of S. C. Buff Orpingtons who could not better themselves by the introduction of some of this blood; highly recommending Mr. Eldridge to any who are in the market for stock or eggs. Breeders from eight states had entries

in this variety, so that Mr. Eldridge has demonstrated quality far above the ordinary.

In Rose Comb and Single Comb Black Minorcas W. O. Chase, Hillsboro, Ill., made a consistently good winning, drawing in rose combs 5th cock, 5th hen, 2d pullet, 3d pen, and in single combs 4th cock, 5th hen, 3d cockerel, 2d and 5th pen. In Single Comb Black Minorcas E. E. Wilson, Indianapolis, Ind., won 2d cock, 1st hen and 1st pen on magnificent birds in first-class show condition.

Peter S. Hurt, Thorntown, Ind., took three 1sts on Golden Sebright Bantams.

Wm. A. Kappey had a fine exhibit of pheasants, winning practically everything in Golden, Silver and Ringneck.

Chas. H. Ring.

THE OKLAHOMA STATE SHOW HELD AT ENID, OKLA., DE- CEMBER 11-18

Brought out an entry of 3,200 birds, among which was a very large number of high class specimens, and premiums won in competition of this kind are very valuable for advertising purposes. We congratulate Oklahoma and the men for their untiring efforts in putting on this show, and we feel that they are doing good work in this new section of the country, and it should show the whole poultry world that the interests of fancy poultry are not confined to any one section, but are spread throughout the entire country.

We are sure that the next state show put on in Oklahoma will even exceed the one just passed and we personally know a number of breeders who intend exhibiting there again the coming year. We understand Oklahoma intends to pattern after the state of Missouri and seek to promulgate and push the work of interesting more people in the breeding of thoroughbred chickens. This is very commendable and Missouri has certainly set her a good example, which she may pattern after, and with her genial climate she may in the near future be

More Winter Eggs from Less Feed

This Poultry Fountain will keep water warm for 36 hours in ordinary weather. It's built like a Fireless Cooker—works like a "Thermos" bottle. When water, always pleasantly warm, is kept before them in winter, the egg yield doubles and trebles. All the food goes to make eggs. None is wasted keeping the fowls warm and active. Cold water in winter chills the fowls and thus freezes dollars right off your pocket. Our **FREE BOOK** gives the experience of successful Poultrymen with this wonderful invention. Ask for it.

Weldon's Fireless Poultry Fountain and Hopper Feeder

The Hopper Feeder is the **only** one which allows the fowls to feed as nature intended—that is, little and often and as appetite dictates. There is no possibility, as there is with other Hoppers, for the strong to crowd away the weak and no opportunity for the greedy fowl to gorge itself to its own undoing. There are holes in the side of the Hopper just large enough to allow the grain to go through without flowing. These holes are made smaller by a metal band which slides up and down. The grain must be picked from these holes by the fowl. Every one shares alike. Dropping grain is caught in the trough. None is wasted.

The Greatest Poultry Catalog Ever Published

Never in the history of the Prairie State Incubator Co., compiled a catalog that anywhere near approaches our 1910

We have put out some of the most costly catalogs of an incubator and brooder manufacturer, but we have never a book so full of genuine, practical and useful information, so attractive and descriptive, as our 1910 catalog contains.

Hurry—They're Going Like Wild

It is a book everyone — amateur or expert — will feel they must possess — will cherish and carefully preserve for reference. It is so helpful, dependable and valuable information. It has over 65 of them are devoted to such interesting topics as the

Poultry Possibilities on the Ordinary Farm.
Which is the Best Breed?
Selecting Breeders.
What System shall the Poultryman Use?
The Intensive or Extensive Plan.
Colony House Method.
Care of Brooders.
Selection of an Incubator.
Poultry Buildings.
Principles of Feeding.

How to Feed Laying, Growing and Fattening—Feeding little Chickens, Lamp or Fireless Brooders, Growing Green Ducks, Diseases of Poultry—Prevention, Handy Poultry Appliances, Feed Formulae, Description of successful hatcheries, brooding appliances. (Many other useful and interesting)

To Make Sure of Getting

Write your name and address on a post card; say "send me your book on Artificial Rearing." You'll get a big surprise.

These articles are not based on theory. They are not "hobbies," not "pet ideas" of poultry cranks, but the cumulative experiences of leading poultrymen who have cast aside all "fool notions and contraptions"—and got down to common-sense ways and practical equipment which long years of experience have proven most successful.

To the beginner these articles are of inestimable value. They'll start you

With this Valuable Book and 1910 PRAIRIE STATE

Kansas State Agricultural College
We have been using one of your incubators on our plant and we have found that it is a very satisfactory machine and gave us excellent results.
Aug. 18, 1909. A. G. PHILIPS.

for those who adopt this winning combination and get the right kind of start.

The Sand Tray Prairie State Incubators are without question the most advanced and most perfect hatchers on the market. As proof of this we need but add that they are in use in the largest and most successful poultry plants. The majority of State Experiment Stations endorse them—the public prefer them wherever their good results are known.

They have equalled the "old hen" in producing chicks that live—chicks that are big, strong, full feathered and equal in every respect to chicks hatched under hens.

Prairie State Universal Hovers and Colony Houses are solving the problem of rearing. They are reducing the death losses to a surprising minimum and shortening the marketing period by inducing faster growth and development which means much greater profit.

Just to cite a few, of thousands of instances, read the letters above.

Why experiment! Why not get the best at first—it's the cheapest by far in the end. Why not get equipment that the leaders in the business prefer?

THE GREEN VIEW POULTRY FARMS

Jackson, Mich., December 1, 1909.
Prairie State Incubator Co., Homer City, Pa.

Dear Sirs: We are going to give you results of trial hatches made by your machines on our farms the past year. We tested four of your No. 1, 150-egg machines, and are pleased to report as follows:

The first machine was set with 150 fertile eggs, and hatched 149 living chicks.

The second machine hatched 132 out of 135 fertile eggs.

The third machine was set with turkey eggs, to ascertain the results on hatching turkey eggs, and we must say that results were beyond our expectations as we got a 99% hatch.

The fourth machine was set with waterfowl eggs such, as duck and goose eggs together, to see if it was possible to hatch same without changing the machine in any way. The result was 97%.

Your idea of ventilation is the simplest, the most successful and easiest to operate of all machines. The sand tray is the secret of your success. In the future we will use only your machines. JOSEPH M. O'BRIEN, Supt.

MATHER FARM POULTRY YARDS

Groton, Conn., September 22, 1909.
Prairie State Incubator Co., Homer City, Pa.

Gentlemen: I am having the pleasure of writing you a few lines to let you know how much I praise your Prairie State Incubator, and Outdoor Brooder. Last winter I ran three Prairie State Incubators, together with other makes, and the Prairie States hatched stronger chicks and ducklings than any other make I ever used. I had hatches as high as 95%, and a great many at 75% and 80% of all eggs placed in the machine, and there are no dead chicks in the shell, nor any cripples in a Prairie State. I think the sand trays are the finest thing there is in regard to applying moisture. Have just taken off a hatch of 75% of the fertile eggs and the chicks are as healthy and strong as if they were hatched early in the season. Where I am at present I have four 240-Egg size Prairie States and one 100-egg size, besides several other makes, but the Prairie State is my standby. I have also found your Brooder to be O. K. in every way, and the Universal hover can't be beat.

IRA D. HAUSER, Manager.

Wilbur's Poultry Tonic has been the favorite for twenty-five years with poultry keepers, because it has proven in practice the claims of its manufacturers—that it is a scientific tonic, providing just what the fowls need without over stimulating or "forcing" growth or abnormal egg-production, to the injury of the fowls.

The Wilbur Company makes a most

fer is remarkable, and of such a character as to enlarge the opportunity of the poultry keeper, they depending for their final profit on the continued use of their tonic. The poultryman who has once given the Wilbur Tonic a fair try-out, makes it a daily ration for his flocks in every stage of growth.

For the most liberal introductory offer you have ever had, write today for particulars to Wilbur Stock Food Co., 749 Huron St., Milwaukee, Wis.

GEO. A. HEYL, WASHINGTON, ILL., BREEDER OF BARRED PLYM- OUTH ROCKS

Reports that he has bought the entire flock formerly owned by Dr. O. P. Bennett. This grand flock of birds added to Mr. Heyl's already strong line puts him in the foremost rank, and one of the best breeders of exhibition Barred Rocks. It will be remembered that the males, Barred Right and Just Right, were champion cockerels at the Chicago show 1906 and 1907. These birds were the sire of the large flock of cockerels and pullets which Mr. Heyl is now offering for sale. He is in position to supply you with anything you may want in this line. He issues a circular which is free for the asking. You will find his ad elsewhere in this issue.

We wish to report that E. E. Wilson, 921 Ashland avenue, Indianapolis, Ind., won on three entries. S. C. B. Minorcas 1st hen, 2nd cock and 1st pen. Also association silver cup for best male and female at the recent St. Louis show. There were 108 S. C. B. Minorcas in the show. Mr. Wilson won the Indiana State championship for the Minorca Club last season. In fact, he is the champion of them all, for he won 12 more special

"Dear Big Jim, you have won many prizes for my papa." S. C. Black Orpington, owned by J. S. Haupt, Easton, Pa., breeder of S. and R. C. White, Buff and Black Orpingtons.

birds than last year. And the quality was very much better.

C. W. Zimmer officiated as judge to the satisfaction of all exhibitors, and he has been engaged to judge the show next year, which will be held on the same dates.

Harry Cass, Buffalo Hart, Ill., exhibited some fine specimens of White Wyandottes and won the cream of the prizes. H. B. Cass, Buffalo Hart, Ill., won the prize for the 10 highest scoring birds in the show on his White Holland Turkeys. His birds, being close to standard requirements, scored very high.

Mr. Mitchell, Mt. Pulaski, Ill., exhibited some very fine Buff Orpingtons, the pullets being exceptionally fine. Many others exhibited birds of good quality and the show was a success in every way.

A VALUABLE INCUBATOR AND PACKAGE OF POULTRY TONIC GIVEN AWAY.

Profits from the poultry yard are dependent simply upon the health and growth of chicks from the day they are hatched to maturity.

Perfectly healthy chicks will grow speedily into broilers and roasters. Perfectly healthy pullets will lay early and often. The only problem, then, is one of insuring perfect health.

To do this, the chicks and hens must be provided with those elements of a tonic nature which they were wont to find for themselves in their original wild state, and which they still, in a measure, secure with ample range.

Watchmen on Fairview Farm, J. S. Haupt, prop., Easton, Pa., breeder of S. and R. C. White, Black and Buff Orpingtons.

liberal offer of a free package, and a valuable "Kon-Takt" Incubator, both without cost, in order to prove the value of their tonic, direct to every poultry keeper. Their introductory premium of-

club ribbons than any one in the United States or Canada. He has a few more good birds for sale and is looking for a record breaking egg season. Write him for prices.

The Brooder Question

When the poultryman goes to his barn or shed to look over his stock of brooders and get the machines ready for use

and as he takes one of the machines down from the pile and dusts it off, and looks at its shabby weather worn sides

as he patches the hole in the tin roof where the paint was accidentally scratched and the rust has eaten in

as he opens the lamp door and takes out the oily tank, and faces the charred wick and lamp black, is it not time for him to stop and ask

is there still no better brooding plan? Must I go through the season with these?

To such thoughtful, progressive poultrymen, the *Hall Brooder System* must appeal. It is the better brooder plan—the one that solves the brooder question.

Bigger Hatches of Chicks that Live

The embryo chicks develop of the *white* of the eggs.

This white is composed largely of *water*.

When *air* that has been *warmed* and *dried* by the flame of a lamp is continually forced into the *egg chamber* of an incubator, the *water* content of the incubating eggs is *evaporated*.

The eggs have *no* means of drinking for absorption—of resupplying themselves.

Imprisoned in their shells, the hot air *evaporates* the *very substance* of which the embryo *chicks* are *developing* and the *result* is, you hatch *small, weak* chicks.

In some of the eggs even the *lining* is so *dried* that the chicks *cannot* pierce it and break their way to freedom and you have chicks *dead* in the shell.

Big hatches of *big, livable* chicks come from the incubator that does *not dry* the eggs.

That incubator is

THE HALL MAMMOTH INCUBATOR

It is the incubator that is *honestly satisfying* the *want*, and *actually filling* the *need*, on both large and small *profit paying* poultry farms.

The Hall Mammoth Incubator Co.,
South Columbia, New York.

Plainfield, N. J., Dec. 6, 1909.

Gentlemen:—Enter my order for 120 Hall hovers and 4 No. 18 Hall Self-Regulating Furnaces. Please make immediate shipment.

These 120 hovers will make an increase in my brooder capacity of 12,000 chicks. This should speak better than words of the success and economy of the Hall Brooder System. The two systems I installed last year and have used throughout the past season, have brooded the chicks with all the warmth and comfort of mother hens, and the loss of chicks in the hovers has been practically nothing.

My Hall Mammoth Incubator hatched wonderfully well throughout the entire season. One of my neighbors was hatching as low as 30 per cent. of his eggs in his small machines. He brought several trays of eggs—from the same breeding birds—over to me to hatch out in my Hall Mammoth Incubator, and they hatched 85 per cent. After this experience, he discarded his small machines and brought all his eggs to me. As I wrote you last May, I had all the hatching of eggs for others, that I could do. Your larger sized machine would have been none too large to handle the custom hatching that was offered.

(Signed) JUSTUS H. COOLEY.

It *may pay* you to *discard* your present *oil* equipment. It certainly will *not pay* you to add to it—to add *unnecessary work* and *uncertainty*. Indeed, an *increase* in oil machines means a *diminishing return* in proportion to your increase in capacity. And at *this* time, no fully informed poultryman would think of *starting new* with *uncertain, laborious, inadequate* equipment. The *Hall Catalog* tells *why*. Send for a copy of our catalog. It is free.

GOOD TO KNOW

by C.W. Zimmer

This department is open to all readers and advertisers in the central territory and they are invited to send in all poultry news items that come to their attention. Address C. W. Zimmer, central representative, Ft. Wayne, Ind.

I wish you a Happy New Year—a prosperous New Year, with more and better birds—and may your success exceed your expectations. And I trust the American Poultry Journal will be the means of your success.

* * *

January 1 is the time to make resolutions. We suggest you “resolve” to raise better quality this year than ever before; cull closely in mating up; remember one good bird that scores one-half point more than your competitor will win you that first prize and coveted silver cup, etc., etc. Quantity is all right, but quality counts most. And right now is the time to think and plan what quality you are going to produce. Remember, years of careful breeding count, and the male is half the pen. If you have not got what you want, better buy an extra good male to head your pen, and, while you are about it, you had better also get a female or two from the same man and thus get his blood lines on both sides. In this way you have his strain as well as his line crossed on your line; and if you special-mate or trap-nest these chicks you will know where your good birds come from.

Resolve, That what is worth doing at all is worth doing WELL.

* * *

Better advertise in the American NOW than to wish you had. Better be glad than sorry.

* * *

If your hen house is damp or frost accumulates on the walls, cut a good size hole close up to the roof and fill in with straw to a point several inches below the opening. A few old boards will hold up the straw. In this way you have ventilation without draft, and, as the straw readily absorbs the moisture, your hen house will soon be dry.

* * *

How many hens have you laying for you? Eggs are 65 cents a dozen in California, 60 cents in New York, and 43 cents in Chicago, and cold weather just coming on. We predict they are going up, up, up. Better get busy and get a piece of this money.

* * *

“We lead, others follow,” is our slogan.

Kemiform is a new remedy for roup. It is a powerful and positive cure, easily given in the drinking water. Look up the ad in this issue.

* * *

C. E. Spaugh, Rugby, Ind., breeder of Barred Rocks, attended the Chicago show.

* * *

The Poultry Dust Bath Company, Whiting, Ind., had a booth at the Chicago show, where breeders were instructed in the merits of “Dustine.” This is the “new way” to be free from lice. They “let the chickens do the work.” You will want to KNOW about this, so send for their literature; it’s free.

* * *

What nicer or more appropriate present for your friend who is a “poultry crank” than a year’s subscription to the American. We will take pleasure in notifying him that you are making him a present of our journal. In sending in his name, just tell us you wish to make a present of the American to Mr. ————. “We do the rest.”

* * *

We lead, others follow.

* * *

Why are bookkeepers like chickens? Give it up? Well, just because they have to scratch for a living.

* * *

Why is a hen immortal? Give it up? Well, because her son never sets.

* * *

How does it come, my friend, that you haven’t sent me any notes along these lines? Won’t you do it in the future?

* * *

Lyman H. Hill, Jackson, Mich., who breeds White Rocks, and has won at all the leading shows, is offering some of his fine stock at special prices this month. See his ad elsewhere in this issue.

* * *

Have you seen any fowl more beautiful than the Partridge Rock? We doubt it. Certainly those exhibited by S. A. Nofztger, North Manchester, Ind., at the Chicago show were beauties, and they possess all the good qualities of the Rock family. Mr. Nofztger is get-

ting out a handsome catalogue which will be a work of art and by far the finest one ever issued on this variety. It will be remembered he is the originator of this variety, and this book will contain a full history of the breed and will also contain much valuable information. You should have this book, by all means. Send for it now.

* * *

C. E. Spaugh, Rugby, has just received his fine new catalogue, which contains much valuable information concerning the breeding of Barred Rocks, together with many illustrations of his birds and farm. All breeders of Barred Rocks will want this book. Send five 2-cent stamps to C. E. Spaugh, Rugby, Ind.

MONEY IN POULTRY.

Did you ever stop to consider the vast amount of money represented by fancy poultry throughout the United States? For instance take the Chicago show with 3,200 birds, the Missouri state show with 5,281 birds, and the Oklahoma state show with 3,200 birds, all held at about the same time. Place an estimate on their value, which it is safe to say would be at least \$20.00 per head, or the vast sum of \$233,620.00. Then think of the number of birds which these breeders have in their yards at home and the value that they represent, and then think of the thousands and thousands of breeders that did not exhibit at either of these three shows and the value of the birds owned by them. Do this and then let any one tell you there is no money in fancy poultry. Well, we will be surprised at you if you do.

**LYMAN H. HILL, JACKSON, MICH.,
BREEDER OF HIGH CLASS
WHITE ROCKS.**

We are pleased to receive a letter from Mr. Hill stating that the demand for his strain of White Rocks has increased to such an extent that he has been compelled to purchase a farm close to Jackson and he is preparing to convert the same into an ideal poultry farm and put up many new poultry buildings, brooder houses, power house, incubator cellar, etc., and that he has secured the services of an experienced breeder of White Rocks who he will place in charge of this farm, that it is his intention of raising 15,000 chicks next Spring.

Those who are posted on the winnings of White Rocks during the past year remember that Mr. Hill has won at such shows as Madison Square Garden, Jamestown Exposition, Chicago, Indianapolis, Toledo, Detroit, and other places, and won well. When one considers the fact that Mr. Hill’s plant of the past has

Buff Orpingtons

Chicago and Indianapolis Winners

Blue comes easy to Martz's line-bred, trap-nested layers. Chicago—1st pen, 1st cockerel, 2nd cock, 3rd cock, four best pullets, four Club Specials. Indianapolis—1st and 2nd pens, 1st cock, 1st pullet, 2nd and 3rd cockerel, five Club Specials, and other minor prizes at both shows. A few cockerels for sale. The largest Egg Catalogue and Mating List ever issued will be ready for mailing about January 10, 1910. Twenty-five illustrations and other valuable information. Free. Send for one.

**King Bone Cutters**

WHAT WOULD YOU DO if you were making bone-cutters and knew by three years of experience that you could sell them by the dozen at the big poultry show being held right in the same city, but you could not get castings fast enough to fill orders promptly? Well, that was my problem, and I solved it by staying away from the poultry show, and reduced my advertising, returned money to two customers who did not want to wait, and actually refused to accept other orders.

Now I am receiving castings faster than ever before and expect to begin the New Year by shipping King Bone Cutters promptly when ordered. \$5.00, and I pay the freight within 500 miles. Send stamp for circular.

R. H. O'Neill, 12 No. Campbell Ave., Chicago

only been of modern size, that he has not had a thousand birds to select from to take his winnings, these winnings are very remarkable and it is no wonder that the demand for his strain of White Rocks has increased to such an extent that he has been compelled to enlarge his poultry plant.

He is now offering some bargains, for details of which we refer you to his ad found elsewhere in this issue. Everything sold by Mr. Hill is guaranteed to please the customer or may be returned at his expense. This liberal guarantee should convince every one that Mr. Hill has confidence in his stock and his ability to please you. His ad will be

in the show, all pens competing. When you consider there were 3,200 birds in this show this is surely an honor worth winning, and stamps Mr. Bretz's red birds as having quality that should please the most fastidious. As the 2d prize cockerel was a very fine specimen of both color and shape, but being quite young and not yet fully matured are the reasons for not having been placed better than 2nd. His 3rd prize cock bird not fully recovered from the molt was somewhat out of condition where otherwise he would have landed higher in the money. Mr. Bretz informs us he has a large number of cockerels that are full brothers to the bird which won second place

"LITTLE BOY BLUE."

Winner of first cockerel at Polo, Ill., last February, in a big class, and sired by Bismark, the winner of first cock at Rockford and Polo, January and February, 1909. The bird was bred and exhibited by Wm. H. Hoover, Polo, Ill., the Barred Rock specialist, and headed one of his yards the past season.

found regularly in the columns of American Poultry Journal.

ROBERT BRETZ, ELRENO, OKLA.,
BREEDER OF ROSE COMB
RHODE ISLAND REDS.

Mr. Bretz won the lion's share of the premiums in the Rhode Island alley at the late Oklahoma State show, which was held at Enid, Okla., in hot classes of reds, winning as follows: 1st, 2nd and 3d pullet, 3rd cock, 2nd cockerel, special ribbon for color and special ribbon for shape of male; and special ribbon for color and special ribbon for shape of female, and a handsome silver cup for best pen in American class. With three judges consulting together he was awarded a handsome silver cup for best pen

which he would offer at this time at very reasonable prices, and he states he has a large flock of birds of similar quality and that he will have a number of exceptionally fine pens mated for the egg trade. If you are in need of stock or eggs of Rose Comb Rhode Island Reds you will do well to write Mr. Bretz, whose address is R. R. No. 3, Elreno, Okla.

Naegele's combination strain of Buff Wyandottes made the following grand winning at Peoria, 1908, show: 1st cock, 1st, 2nd, 3d, 5th pullet at Peoria, December, 1909, in the strongest class ever entered at this show, 1st, 2d, 3d cocks; 1st, 3d, 4th hens; 1st pullet; 1st, 4th pens. No cockerels shown. He is now booking orders for eggs.

BARRED PLYMOUTH ROCKS: THE BEST BREED.

Written for American Poultry Journal
by Wm. H. Hoover, Polo, Ill.

IN the show room, at the fairs and by mail we find there are a great many people who anticipate owning a few fancy fowls some time in the near future and are debating the question what variety to buy and where to buy them.

Now nearly all my life I have raised or helped to raise fancy pure bred poultry of many breeds, and I can safely say to all who are debating the question of variety that there is no breed so universally popular and so richly en-

at range, rustling mostly for themselves, they are superior. They do equally well yarded on a town lot, living mostly from table scraps and cooking refuse. They are easily confined with five-foot wire netting, and do not get lazy under restraint like Brahmas or Cochins. They are most excellent layers of a large cream-colored egg and at the same time, if one is wanted for table use, you have the choicest.

As a market fowl it is enough to say that many dealers pay more for Barred Rocks either live or dressed than for any other variety. They make broilers quickly, and as roasters their carcasses excel in plumpness, smoothness, clean, appetizing appearance and fine shape.

While they make the best of mothers,

remuneration from this source is most satisfactory to the breeder who has been successful in establishing a strain noted for show quality. So to everybody in general, the city dweller who has a little space and a few minutes' spare time each day, to the boy or girl who wants a few fowls for their very own to the farmer's wife or daughter who are tired of raising common barn-yard fowls, get some Barred Plymouth Rocks, they will bring pleasure as well as profit, furnish the necessary diversion from regular office work. Then, again, a few chickens have been known to save the day when other things failed. A few Barred Rocks in the care of a boy or girl who loves them is the best thing ever for teaching responsibility, kindness, nature study and sympathy with living things. Many an hour will be profitably spent with the fowls which possibly for want of employment might have been spent on the street or in questionable company. Many of our most successful Barred Plymouth Rock breeders date their beginning from the ownership of a pair of fowls or setting of eggs when a boy. And any one who is raising common barn-yard fowl will in a year's time be amply repaid if they will sell off the old flock to the first wagon that comes along and invest the proceeds in some pure bred Barred Plymouth Rocks.

The satisfaction derived from raising something nice will be appreciated, as well as the extra number of eggs and increased weight. Then it costs

LITTLE BOY BLUE.

The above picture shows this magnificent bird as he appeared at maturity. Bred and owned by Wm. H. Hoover, Polo, Ill.

dowed with qualities which suit people in all circumstances as the Barred Plymouth Rock.

I can just remember our first "Plymouth Rocks," as they were then called. The White and Buff Rocks have originated since then, also the Wyandottes, Orpingtons and Rhode Island Reds, and although some of these varieties have for a time tried to wrest the title of supremacy from the Barred Plymouth Rock none of them have stood the test, and today the Barred Rock breed stands supreme in popularity.

We have raised them for 15 years and write from actual experience, both from the farmer's and fancier's standpoint.

As a general purpose fowl, for the farm

they are not inveterate setters, being easily broken of broodiness, and are laying again in a few days.

They are very hardy and with any reasonable shelter will seldom suffer from frozen combs, as will Leghorns, Spanish and Minorcas. Our hen houses, while not expensive, are all built tight, dry, light and substantial, and except in the very coldest, below zero weather, the doors and windows are all always open day and night, summer and winter.

On account of their beauty in plumage and their shape of graceful curves they are a favorite with the fancier. Then there is no limit to the demand for first-class specimens for exhibition and breeding purposes, therefore the

BIG RAPIDS, MICHIGAN

no more to feed pure bred fowls than culls.

The fowls can be bought from any reliable breeder. There are several good strains advertised in any poultry journal. The breeder is just as anxious to please you as you are to be pleased. Write and tell him just what you want. Don't ask him to describe what he has to you.

Sometimes I have known customers to send what money they could invest, telling the breeder to send the best he could for the price, and get excellent value for the money. Then if you are

either in growth or in egg production, must have a variety of food, and this variety should include green foods, animal foods, mash, grit and grain. But after all this is known and conceded, the fact remains that the principal food for fowls is grain. Corn, wheat and oats form the great part of the poultry bill of fare. These grains, or some of them, are fed the year round. They constitute the staples of poultry diet. They make the heavy drafts on the poultry treasury. The prices at which these grains are now selling and the prices at which they are likely to sell in the future, fur-

time he scatters the grain in the litter after the chickens have gone to roost, so that the fowls can, theoretically, feed themselves early in the morning.

This is fine in theory, but in practice it results in drawing a horde of rats to hold their nightly carnival and fatten themselves on the grain in the litter, which was intended for the fowls. Often the chickens are very hungry when the grain is thrown to them during the day, and at such times they will gorge themselves to such an extent that the grain not only does them no good, but leaves them stupid and inactive, so as to retard their growth or limit their egg production. Usually the strong and combative fowl will get too much, while the weaker and timid fowl will go hungry.

We have had in our yards in times past the same troubles in feeding as other poultry raisers. We have had grain which the chickens did not pick up immediately deluged with a sudden shower until it was thoroughly soaked; we have had clouds of sparrows light among our small chickens and seemingly eat more grain and cracked corn than the chicks themselves; we have had rats harbor in our yards because they found the grain scattered in the litter and feasted on it nightly until they were sleek and fat; we have had our chickens unaccountably hungry at some times, so that they would gorge themselves when the grain was thrown to them, although they are fed with great regularity, and at other times they would scarcely touch the grain thrown to them and would leave it to be wasted. The feeding of grain with us was the serious financial question, just as it is the serious financial question with every poultry raiser, large or small.

About a year ago we purchased and installed in our yards an automatic feeder which was advertised to obviate the serious difficulties in feeding grain and to make a large saving in money and labor. After ten days' trial we were so well satisfied with the results that we ordered and installed fifty of them and our yards are now fully equipped with them. They are the greatest feed and labor saving invention ever placed in a poultry yard. We have no more trouble with rats or sparrows. Not a particle of grain is wasted by getting wet or by being contaminated. The fowls feed themselves just as early in the morning as they desire. They can get all the feed they need at any time, and yet will not overfeed themselves. The old-fashioned wasteful way of throwing feed in the litter the night before, thus furnishing feed for the rats, is now obsolete.

The chickens, small and large, now always feed themselves just enough. The chicks grow better. The hens lay better. Our flocks are in every way in better condition since using these feeders. We would not do without the feeders for five times their cost. They pay for themselves in labor and feed several times in a year. Fowls are better contented to stay in their own enclosure. They do not attempt to fly over the fence, because they can, by just enough effort to keep them active, get all the grain they need in their own yard. The great problem of feeding poultry is finally solved by this feeder. The writer will be very glad to furnish free any further information desired.

Frank J. Stapp.

Manager River Home Poultry Yards,
Perrysburg, Ohio.

One of the crack Buff Cochin hens bred and owned by H. N. Hanchett, Jackson, Mich. This splendid specimen is valued by her owner at \$100. She was first prize pullet at the big Jackson show last year. Mr. Hanchett writes: "This picture doesn't do the bird justice at all, but is all I have of her." It shows her with foot feathering all broken off. Yet in spite of this and in spite of the somewhat frightened pose, one can appreciate the wonderful globular Cochin type, the long, profuse feathering—the true Cochin quality for which Hanchett's Buff Cochins are noted from coast to coast. Mr. Hanchett tells us that he never had such grand cockerels and pullets to offer as he has this fall. And this is saying a great deal, for he always has some good ones.

pleased with your birds it does a breeder lots of good if you write and tell him so.

FEEDING FANCY FOWLS.

THERE have been so many articles written on the subject of poultry feeding that the subject in a certain sense has become somewhat worn and threadbare because of the hackneyed expressions about "balanced rations," "protein" and "carbohydrates" and about the "secrets" telling how to make a wagonload, more or less, of nutritious poultry food for 13 cents. An analysis of many of these articles will show that they proceed on the erroneous theory of saving pennies and wasting dollars. Every intelligent poultry raiser understands that his birds, in order to thrive

nish the greatest practical question confronting the poultry raiser today, whether he is raising market poultry or fancy stock. Notwithstanding the fact that these grains cost from two to three times as much as they cost twenty years ago, the average poultry raiser and farmer goes on wasting the precious grain just as he or his parents wasted it then. It is entirely conservative to state that the average poultry raiser and farmer wastes 25 per cent of all of the grain which he "feeds" to his poultry. In the summertime he scatters it outdoors and in the yards, where part of it is eaten by the fowls and the rest is eaten by sparrows or other wild birds or rodents, or if any is left over, as is quite likely, it is often soaked with rain until all nutritive value is lost and it is rendered unfit for food. In the winter

WESTERN NOTES

by Amos Burhans

This department is open to all readers and advertisers in the western territory and all are invited to send in all poultry news items that come to their attention. Address Amos Burhans, Waterville, Minn.

The Omaha show has secured Victor Hobbs to handle the Orpingtons, which means a big entry of them. From the way things look now there will be a real, live show in this burg on the Big Muddy.

There are a number of the readers of the American who are waiting to hear about the big White Leghorn plant that is being built by Arthur Brandies at Omaha, and when we are at the Omaha show we shall photograph it and get the necessary notes to write more about it.

Throughout the western states there is more and more competition from year to year when it comes to the locating of the various specialty clubs' silver cups. This is very keen in the Barred Rock circles and we have known of one or two competitions that have not been overly peaceful. Steady, boys. Why not pass the cup about?

Editor Purvis and one of his contributors has called something "two hundred egg liars," and the chances are that we will record his sudden demise in a month or two. This two hundred egg hen business is getting pretty hot. Purvis offered fifty dollars each for some two hundred egg hens and the boys on the Pacific slope who are breeding layers say they have the goods, but Purvis does not show up and put the money down. I fear he is the same as most other western editors—just as impecunious as any of us.

They tell us that the new Coliseum is done with at Des Moines. This is good news. Iowans have not had a good show hall located toward the middle of their state and now if they all push they will have a good town to hold their annual fixture in and a great building to house the birds. Des Moines should hold the state show every year. It is centrally located and more easily reached for the mass of breeders than any other point in the state. Pull for the appropriation now, boys, and then you can draw some out-of-the-state exhibits.

Brother Rankin is more or less concerned over the fact that the Nebraska state poultry association has something over 600 members yet has not enough "get up and git" spirit to form or even make the attempt at forming an A. P. A. branch within the state. Hammer away, brother. Don't you remember what someone told you during a cold night in February some years ago?

A western breeder dropped a late copy, in fact the first one, of a much advertised newly born poultry journal hailing from a port on the lakes, accidentally into his straw pile. He found it the next morning and was surprised on opening it that it had not set fire to the straw, but when he glanced

through it, so he writes me, he found it to be just as tame as the other ones. And his wonder departed.

Poor old Reese Hicks is having a little jollification meeting all to himself out there in wintry Kansas. He has had the Poultry Culture enlarged so that it will now hold all the brain froth he may give vent to. There is a lot of satisfaction in having room to shoot your mind off when you want to, and yet the wonder of it is that Hicks has anything left to say in print.

From the way it looks to the man up the tree, we will now have some fun with the man who is telling how the faking is to be done. His book is selling fast, so the boys say, and referring to DeGraff as the goose, they add that

what is good for the goose is good for the gander.

I suppose that now reform has struck the poultry press, it will concern principally those who have unpaid advertising bills and those who will not come into the journal of the boss. Sure, it's a great game.

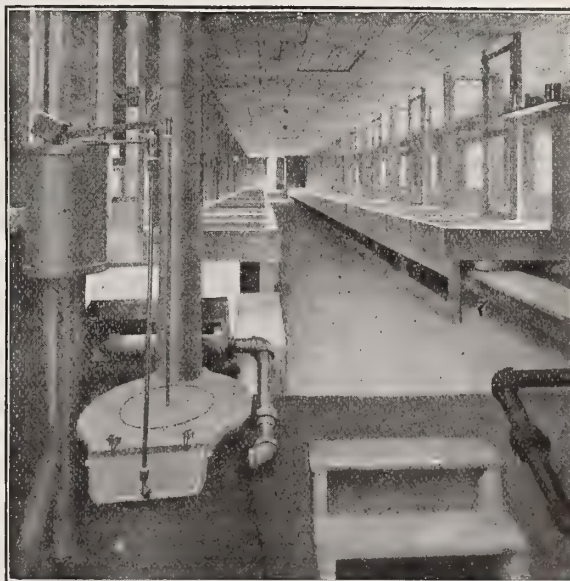

The Kansas City show and the Nebraska state show at Hastings are both making preparations for a big lot of birds.

The new Kellerstrass Farm catalog will soon be out, and we know that all who are interested in White Orpingtons will want it. This will be the best thing the Kellerstrass Farm has issued and will be full of information of value to all breeders. The business this farm is doing in Crystal White Orpingtons this winter will surprise those who say there is nothing in the business, for here is a well organized business that runs on system, not red tape, from the front to the rear, the profits from which are just as sure as those in any other line of stock breeding.

Tom Ricksecker, Kansas City, Mo.,

SAFETY BROODING

Candee Hot Water Brooder System

Healthy Heat Makes Healthy Chicks

THE FEATURES ARE

Economical Hot Water Heater that burns cheap fuel, eliminates danger of fire and is 15% cheaper than oil to operate.

Automatic Temperature Regulator that operates with the expansion of the water in the system and insures absolutely even temperature in all the hovers.

System of piping and hover construction that keeps chicks from crowding.

Write to-day for catalog and prices. Estimates free.

Candee Hot Water Brooder Co., Box B, DeWitt, New York

proprietor of the Red Lawn Farm, where Single Comb Reds are the fowls par excellence, is doing a good business and we are glad to note his continued success, for he has the birds and treats his customers right.

Frank Miltenberger, of Cortland, Neb., is sending out some good Columbians, so a customer writes us who bought through the A. P. J.

The Barred Rocks that S. T. Divinia, St. Joe, Mo., is sending out are continuing to uphold the good name of that breeder. An Iowa man recently entrusted an order for nearly a hundred dollars' worth of good birds for show and breeding to Mr. Divinia, and writes us that he is well pleased.

Kansas Barred Rocks are also doing well, from the report that we get from A. E. Blaker, Parsons. He says trade has opened up fine. Stock is being shipped every day.

After the storm comes the calm. Uncle John, of the City of Beans, has drawn in his horns a bit on the question of crossing the cockerel line of exhibition males with the pullet line of exhibition females. See last F. P.

The state of Kansas is doing itself proud over the fact that the imperial family of Germany is eating Kansas milk-fed chickens. This sort of chicken was tendered to Prince Henry when he was in this country some time ago, and he stated that it was the best fowl he had ever tasted, so when he got home he sent an order over to Armour's, I think, and asked for more of it. This order was followed by another and still another, and now the German emperor is dining on Kansas fowls.

Brother Quisenberry, secretary of the Missouri state poultry board, is one of the best secretaries in the world, so Missourians have the right to think. Take a look at the St. Louis show report in this issue.

A JUDGING TRIP TO OLD SAN ANTONIO.

LAST year I had the pleasure of judging the poultry show held by the Houston (Texas) Poultry Association. While there I met a number of San Antonio exhibitors, and through their efforts I was engaged to judge the poultry at the great International Fair at San Antonio, which opened November 6 and closed November 17.

On November 6 I arrived in San Antonio, the beautiful city of sunshine and flowers, and having a few days before my date for judging, I made the most of my opportunity to see San Antonio, with her many interests, both historical and modern.

Perhaps the most interesting feature is the Alamo, the shrine of Texas liberty, which is one of the historical buildings of the world. It was built in 1718, and was originally a church, convent and prison. The place where Davy Crockett, Travis, Bowie and Bonham gave their lives for the defense of their country and planted the Stars and Stripes in Texas.

Time and space will not permit me to go more fully into details, nor to mention the many interesting things, both new and old, that San Antonio holds for the sightseer; however, all are well worth seeing.

Having had some correspondence with Mr. F. W. Eichlitz, and having met him at Houston, I hunted him up and found that he conducts an extensive insurance business when he isn't talking "chicken." Mr. Eichlitz is a good and enthusiastic breeder of both Rose and Single Comb Rhode Island Reds. At Mr. Eichlitz's suggestion we called on Mr. W. H. Brown, who is agent for the American Express Company and a breeder of Buff Plymouth Rocks, which is one of the best business combinations I know of. If all express agents were poultry fanciers the stock and eggs shipped over the country would have much better care than they now receive.

On Monday, November 8, I visited the fair, where from the tops of the buildings the Stars and Stripes shared the breezes with the Mexican flags, giving truth to the name "International Fair."

At the poultry building I met Mr. L. M. Samuels, an old-time fancier and former editor of the first poultry journal published in the South. Mr. Samuels is a true blue fancier and also knows how to conduct a poultry show.

In looking over the show, the first thing that stared me in the face was 270 Barred Rocks; the next largest class were the Rhode Island Reds, and I found some very fine specimens in this class. The winners in the Single and Rose Comb Rhode Island Reds were Messrs. F. W. Eichlitz and J. W. Rippes. Mr. Rippes also showed a nice string of White Leghorns. The White Plymouth Rocks also had a large class; winners were Robert Thompson and D. E. Root. Out of a large class of Buff Plymouth Rocks Mr. W. H. Brown was winner of all prizes. Mrs. Voorhies Brown was winner of all prizes out of a large class of Buff Orpingtons. Mrs. Brown is the wife of the president of the Fair Association, which is another excellent combination for the poultry interests of the fair.

There were in all about 2,000 birds on exhibition, and the show was one of the best and most pleasant, as well as being conducted by as agreeable a bunch of

fellows as I have ever had the pleasure of being with, and I want to say to any of the northern fanciers who may visit San Antonio, don't fail to call on any of the above named fanciers, and they will leave their business any day to talk "chicken."

The San Antonio Poultry Association is going to hold a show some time next year, and every effort will be put forth to make it the finest show in the South.
Danville, Ill. O. L. McCord.

THE DOCTOR AND THE CHICK.

To successfully doctor a sick chick first begin with the hen. Whatever applies to the mother may also be applied to the sire. No one who ever expects to meet with success in the rearing of poultry can ever for a moment overlook the fundamental law of stamina of constitution in the sire and dam, the foundation from which the new-born chick has drawn its vitality.

We venture to say that over one-half of diseases occurring in young chicks have the nucleus in the breeding yard. Begin there to apply remedies for weakness of the throat, lungs or bowels. Live with your breeders for a few days. Note the brightness of their eyes, the appetite, activity, size, shape and strength. Select from among these the most promising, healthy specimens. Give them the best of food and attention; set only their eggs and learn the first lesson in the art of doctoring the growing chick.

But suppose that you are a beginner and have not learned in the expensive

school of experience nature's laws and her methods, and you have a brood of young chicks which thru some error in breeding, hatching, overheating or chilling have developed bowel trouble, the symptoms of which are unnatural; thirst, loss of appetite and a liquid discharge which in severe cases assumes a whitish color. Your duty now is to remove the sick ones to warm, comfortable quarters. Give no food or water whatever. Boil one quart of milk, when cool add six compressed lime water tablets previously dissolved in a little cold water. Keep this mixture before them until marked improvement is noticed, then gradually add food and water. Remember that a chick once having severe bowel trouble receives a shock to its system from which it rarely recovers, its growth is retarded and as a breeding specimen is utterly worthless. Again there may appear in the brood some which droop around, pick at this and pick at that, eat but very little, stand listlessly around and seem to wonder why they are on earth. There is in these cases an error either in breeding or incubation. Doctoring is useless. Separate them from the rest, for they may have in their system the hereditary predisposition to tuberculosis. Watch them carefully for a few weeks and if there is no improvement put them out of the way.

Roup may develop in the growing chick. The attack itself comes on suddenly in the night and is usually preceded by all the signs of a bad cold. Offensive discharges occur from the mouth and nostrils. The head swells,

breathing is difficult, cankerous spots appear in the mouth and exhaustion is a marked feature. This highly contagious disease occurs more frequently during cold, damp spring weather, or in young stock hatched rather late the early winter months catching them before they are fully feathered, or hardened enough by mature growth to stand a sudden change of temperature. To successfully combat this disease take of permanganate of potassium one drachm, water one ounce, mix, put one teaspoonful of this preparation into one pint of water. This makes a 1-1000 solution, a powerful stimulant and antiseptic, practically non-irritating and not dangerous. Take the fowl in your lap or between the knees, with the left thumb and forefinger grasp each side of the base of the head, extend the neck well forward and with the other hand open the mouth, keeping it open with the thumb and forefinger of the left hand while you spray the throat, mouth and nostrils thoroughly. Bathe the face good and keep water before them in which one teaspoonful of tincture of iron to each quart of water has been added, or some reliable Roup remedy. Spray the throat morning and evening until improvement is well marked, then once each day will be sufficient.

Wiggins, Colo.

G. E. Kiner.

Better raise a dozen fine, vigorous chicks that will mature quickly, as you will run better chances of having some "prize winner," than to raise 100 scrawny ones, none of which will ever amount to anything.

The Parkside Poultry Farm, N. P. Easling, Prop., Box 40, Pekin, Ill.

A VISIT TO THE FAMOUS CHEVIOT POULTRY FARMS.

THE one great sensation of the 1909 Cincinnati show was the two pens of Orpingtons, one each of Buff and Black, shown by Milton W. Brown, owner of the Cheviot Poultry Farms.

These two pens are certainly the best two pens of Orpingtons we have seen. The judge remarking that the pen of Buffs were the best he had seen anywhere.

These two pens would have made a sensation at Madison Square, and indeed

mingham (England) pullet, first Belfast hen, second Belfast (Ireland) hen. One of the hens had also won at the Crystal Palace, London, in Mr. Sissons' hands. It is no wonder then that these birds were a sensation and caused the aisle in front to be blocked most of the time.

The cockerel heading this pen was raised by Mr. Brown himself, and aside from the fact that the tail was not yet perfectly moulted out, was in all ways a credit to the pen, being low set, of splendid type, splendid, low five-point comb and even, rich golden buff of the same perfect shade all over.

The pen of Blacks was quite as sen-

in Blacks, and it is very doubtful if a pen of such quality can be found in any variety in any American show this year.

All these hens were from one to four pounds over Standard weight and of the most exquisite type and color.

Mr. Brown showed no Whites, owing to the fact that he had sold a pen of Whites to a young man to show at Cincinnati, and agreed to stay out of the show in that color.

We saw some of the famous Cheviot Farm Whites, however, at Mr. Brown's home, where he keeps a couple of hundred birds. We were unable to go out to the farm, some two miles from the end of the car line, but were repaid for our visit to the yards Mr. Brown keeps at his home.

Here we saw some Whites of the most sensational type. We saw all his imported birds that came from Mr. Sissons' matings in England and were said to be the best Whites that had ever left England, and we are inclined to justify the estimate.

Here is size, type and color. We saw pullets weighing as much as nine pounds, of sensational type and color. Mr. Brown certainly has the type in Whites. One cockerel in particular would do credit to any Black breeder in the country. This cockerel had immense bone, a perfect eye and glistening white in color, but had a comb not quite up to concert pitch. So far as we could judge, the only fault.

We saw some thirty coops in which these birds and the Buffs had come from England. These coops were being used for cockerel coops and were sufficiently roomy for their comfort.

Mr. Brown explained that Mr. Sissons was now using a very much lighter coop and the express bills were cut to about one-fourth what the first shipments cost.

Asked how the trade in eggs had been the past year, Mr. Brown replied that he had returned something over \$400 the past year because he could not fill the orders, but that in all probability he would be able to meet all calls next year, as he had added several new branch farms with competent managers.

Mr. Brown now owns all the interest in the Cheviot Farms, having purchased Mr. Coleman's interest, together with all the birds Mr. Coleman owned, Mr. Coleman going into the insurance business.

The Carey, Ohio, farm will be managed in future by Mr. Shireman, who made the best record last year in raising of any of the branch managers.

Mr. H. E. Stauffer has also been secured as manager of one of the farms. Mr. Carl Disser manages the original Cheviot Farm; Mr. Edwin Brown manages the Oklahoma farm; Mr. Henry Burr manages the Texas farm, and in all there are now some twenty-two men giving all their time to the Cheviot Poultry Farms.

Mr. Brown has imported some sensational Buff cockerels to mate with his home-raised hens, and these, added to the two all-imported pens, will give the Cheviot Farms a wonderful stud.

Several of the best pens are now in the South, where chickens are raised in the winter. Eggs are being shipped daily from the home farm to the South for winter hatching, where the birds can be raised to best advantage at this time. These birds another year will supply the southern egg trade, which the

The above cuts show the quality of Orpingtons bred on Cheviot Farms, Cincinnati, Ohio. Nos. 6, 7, 8 are Buff hens out of first Cincinnati pen, and include (7) first Birmingham hen, (8) Crystal Palace winner, (6) first Belfast hen. 2, 4, 5, 9 are hens from first Cincinnati pen.

there were individual specimens in the pens that would alone make a furore at any show in the world.

For example, the Buff pen contained hens weighing between eleven and twelve pounds, of perfect type, extremely short on legs and of the most perfect, even golden buff imaginable.

All these birds had good, low, regular combs and perfect eyes, and in fact were sensational in all respects.

The Buff pen contained four hens imported from Mr. Sisson's famous matings in England and included Mr. Sissons' first Birmingham hen, first Bir-

mingham as the pen of Buffs and contained some very famous hens, including the dam of the first Madison Square, Cleveland, Boston, Allentown shows of last year, as well as of a score of other winners last year at Boston, Madison Square, Jamestown and Chicago. This was his famous Black Empress that created such interest at the special exhibit at the Tennessee State Fair this year. There was also the first Allentown hen of this year, that defeated the originator's \$1,000 hen. These four hens between them have produced some of the most sensational winners in the world

Cheviot Farms is reaching out for quite strongly.

We confess we had expected to see more expensive and finer buildings on a farm so famous. Mr. Brown said, however, that for the present he could not afford both fine birds and fine buildings, and the buildings would answer perfectly for the present, being open front houses of modest character, till he had strengthened himself in all the Buffs and Whites he wanted to import from England.

Asked if he had not imported any Blacks, he replied that he had imported some Blacks, but they were so far inferior to his own that he had given up trying to get any help in Blacks from importing.

He showed us a cock he had just bought in Blacks. The bird had won first at Chicago as cockerel and the year following as cock, but he was in no way equal to the average male bird we saw on the place, being very poor in type as compared with the low-set birds heading other pens. His eye was quite light in color. Mr. Brown said he would use the bird in a short mating and sell the eggs at \$3 a setting.

The Cheviot Farms certainly must be counted among the notable breeding establishments of the land, and it is quite apparent that no stone will be left unturned to keep the stock at the very head of the procession. Mr. Brown remarked that if he could find any better birds than he possessed he would scarcely consider price if he could secure them.

We are doubtful, however, if better birds can be found. We certainly do not know where.

TURKEY RAISING.

ANY one who reads the poultry papers and who is observant of the trend of affairs in the community around him must have observed that the poultry industry is going forward by leaps and bounds. One branch only, that of turkey raising, does not seem to be making the progress it should. And yet the high prices of turkeys at the holiday seasons testify to the fact that this branch of the industry must be profitable. Dressed turkeys at 25 and 30 cents a pound and breeding turkeys at \$5 and \$15 a piece are profitable.

It is a prevalent opinion that turkeys are difficult to raise, and as a matter of fact the loss of small poults in a flock is often very great. We think that there are some reasons for this difficulty that might be overcome. The first thing to be avoided is inbreeding. Whereas inbreeding and line-breeding often produce good results in the raising of chickens, they are extremely detrimental in the raising of turkeys, making the poults weak and delicate, and making it possible for disease to get a foothold in a flock. The most disastrous disease is blackhead, which we think may be prevented by having the male and female lines in the breeding flock absolutely unrelated.

The next important thing is range. Turkeys need it to some degree, some breeds demanding more than others. Bronze turkeys are great rangers and foragers, while the White Hollands and Bourbon Reds are more domestic and will thrive on a more limited range. But they need their freedom from the start and the brood will do better with a

chance to range about the grounds than to be confined in coops after the first few days. If the weather is pleasant we prefer to let them loose from the time they hatch, getting them in at night only. Exception must be made in the case of wet weather, as poults are susceptible to dampness and should be kept in until the dew is off in the morning, and always in rainy weather.

Another enemy of little poults is over-feeding, another lice and another filth. They will do better to shift quite largely for themselves in the matter of food, having a light feed of hard grains at night with plenty of oyster shell available. Perhaps more turkeys are lost from lice than from any other cause. They should be dusted often with powder and their night quarters should be clean. Feeding places and drinking vessels must be scrupulously clean.

The market is changing somewhat with regard to its demand for size, and this will be an advantage to the turkey raiser. Excessive size in the breeding flocks tends to difficulty in raising the poults. The market is beginning to demand eight and ten-pound dressed birds, probably because of the high prices. It is easier to raise more of these medium-sized birds than of the larger ones, and the more domestic breeds fatten easily at that size.

The Bronze is a very popular bird, especially for large ranges. The White Holland is crowding it for first place among those who like a domestic turkey. In the last few years the Bourbon Red has risen to favor, having many excellent qualities and being very handsome as well. The other four varieties are all raised to a lesser extent.

But whatever variety is chosen there is great opportunity for growth in the turkey industry. The demand is unlimited, the profits are good, and it is possible to learn success in the management.

M. A. Dartt.

BLACK TURKEYS.

I have raised the Black turkeys for eight or nine years. Before that I raised the Bronze for several years. I must say that I would not change the Black for the Bronze again by any means. If anything I think the Black turkey a more healthy fowl and easier to raise. It is larger than the common Bronze, mature toms weighing about forty pounds, and mature hens about twenty-four pounds.

The Black turkey is quite gentle by nature and does not ramble any farther than the Bronze. I have a hundred head this year and they come up nearly every night. They would come home every

A. D. Huffman, R. 33, Wanamaker, Ind.

BLAKER'S BARRED PLY. ROCKS WIN

Do you want a winner for your show? We have five grand show rocks, eighteen exhibition cockerels, sixteen exhibition hens and twenty-two crack show pullets, rapidly rounding into show shape, the cream of over 500 head. They are being conditioned with the same care and skill that was used by me in fitting E. B. Thompson's great Madison Square winners during my two seasons with him as head poultryman. These birds are fit to show anywhere, are the down-to-date new standard kind; clean, snappy, narrow barred, elegant shape, low even combs, rich eye and leg color. Many are direct descendants of Madison Square Garden winners. We also have hundreds of select breeders and fine utility birds. Our 32-page page catalog tells all about us and the matings that produced these fine birds.

A. E. Blaker

Route 2, Box A

Parsons, Kansas

night if it were not for the many wire fences. Some nights they will become confused and run up and down the fences, trying to get over and come home. I raised my hundred birds from ten hen turkeys and did not get near all the eggs to set. So they are good layers and the young are easy to raise.

As to my methods of raising turkeys, in early spring I gather the eggs as regularly as possible so as not to have them chilled. When I get some forty or fifty eggs I put them under chicken hens and a turkey hen that are ready to set, and let the turkey have all the little ones when hatched. I do not feed until forty-eight hours old, then soak stale bread in water until soft, squeeze dry and feed with milk curd cooked for them

pose of increasing the interest in the Bourbon Red turkey, of perfecting them as a special variety, and of putting them among the foremost varieties of fowls.

The membership fee is \$2, which includes and covers annual dues until October 1, 1910.

SOME INFORMATION ABOUT TURKEYS.

Mr. J. C. Clipp, Saltillo, Ind.

Dear Sir: Seeing your article on the turkey question in the November number of the American Poultry Journal I beg to ask a few more questions which were not mentioned. I am much interested in raising turkeys, but it's new business, therefore haven't been very suc-

not to feed poultts but a very little amount of food, and not any until they are at least thirty-six hours old. I prefer turkey hens for mothers; they understand the requirements of the poultts much better than the "chicken" mothers. In taking care of the poultts I first select a rice large grassy lot, where the grass is short; then prepare a roomy coop, so that the poultts will have ample room to scamper about without coming in danger with the mother's great feet and being mashed to death. The first feed I give is curd milk. Sometimes wheat bread softened with sweet milk. But I feed them very limited. Cut onion tops very fine and mix with the soft bread and season with black pepper. I feed this food morning, noon and night, but in a very limited way, as poultts would kill themselves within a week if fed all they will eat, as they have appetites like an ostrich and will overeat themselves very quickly. The majority of turkeys hatched over the country are killed by overfeeding, in a majority of cases turkey poultts will do much better to just turn them out with the mother turkey and let them run at will. Yet it is best to keep the poultts up out of morning dew and rain storms. I keep grit constantly before them and if there is no charcoal any ways near where they run I prefer fine charcoal for them. They will eat of this very eagerly. If you have range for your poultts don't feed them anything except a light feed at night after the poultts are three weeks old, and then see that the food is pure. Good, plump, sound wheat is fine for poultts. Never feed turkeys stale wheat; wheat that has been damaged from any cause is almost certain death to turkeys. I find that poultts will not bear handling. Never handle your poultts only when absolutely necessary, and then with the utmost care. Lice is one of the greatest enemies of turkey poultts and should be watched with a most skillful eye. The reason the amateur turkey grower fails to find lice on turkey poultts is because the lice is near the color of the poultts, consequently very hard to find by anyone not experienced in the turkey business. If you will look between the flight feathers of wings when poultts are about four days old you will find them in abundance, as they will run and hide as soon as you disturb them. The long, gray body

S. C. White Orpington pullets. J. S. Haupt, Easton, Pa., breeder of R. and S. C. White, Black and Buff Orpingtons.

until they are two or three weeks old. I then feed corn bread and wheat bread dry.

To my mind the best thing for turkeys is plenty of good range and freedom. Do not confine them any more than you can possibly help. Keep the lice off and turkeys are not so much trouble as a great many think.

Elsberry, Mo. Mrs. Joe Burger.

BOURBON RED TURKEY CLUB.

If you desire the advancement of the Bourbon Red turkey then join the National Bourbon Red Turkey Club, which has been formed with Mrs. G. U. Price, Belmont, O., as acting president, and Mrs. Minnie M. B. Brown as acting secretary and treasurer, until such a time as members of the club shall decide upon a time of election of officers and of forming a constitution.

This club is organized for the pur-

cessful, but hate to give up. I've a good start with White turkeys, one tom and three hens, if I care to keep all. Are they the best to raise? How do you rid them of lice? How do you house them, and do you keep them up until the dew is off or rainy weather? Do you feed at all when taken off and what kind of feed? We have six acres in orchard, besides grain and pasture field in which they can go. Thanking you very much for whatever advice you may offer.

Yours respectfully,

Mrs. D. R. M.

Ans.—I have tried, I suppose, every known plan for feeding turkey poultts and have settled the question in my mind into one way of feeding and managing our poultts. I have fully decided and believe I am right in stating that the nearer we imitate nature in managing and feeding turkeys the better success we will have. I have long since learned

THE ONLY INCUBATOR CONSTRUCTED ON THE RIGHT PRINCIPLE—Let Us Tell You Why

THE lamp is underneath—in the center. Thousands of thermometer tests prove the heat to be *uniformly* distributed—exactly the same in corners as in center. No other incubator will stand this test. The lamp on side is always a bother on others. The X-Ray oil tank holds one and one-half gallons—guaranteed to be enough for a complete hatch with the X-Ray Incubator. Fill the tank at the start, and no more filling—no more trouble—no more time or work necessary.

Other incubators *waste* the heat. That's why they burn 3 to 5 gallons of oil every hatch. The X-Ray controls the heat. That's why one gallon of oil is enough. Other incubators keep the flame at the same height and allow the heat to escape when it gets too hot. The X-Ray automatically cuts the flame down at the burner. That saves your oil. Figure how much the saving is every season—for you.

X-RAY INCUBATOR COMPANY,

The X-Ray Incubator opens from the top—the *only perfect* system of ventilation—just like mother hen. Eggs are *easiest* to turn—no need to remove them. That means less egg-handling. Temperature restored in 15 minutes—while other incubators take 4 to 8 hours to "heat up." Thermometer *always* in sight. Best in principle and best in construction. Enameled-steel-covered; beautiful rosewood finish—bottom and all. Steel legs—not wobbly, wooden ones. Double glass door at top.

But get our book—Free Trial, and Freight Prepaid offer—if you are interested in the *only perfect* incubator.

X-Ray Brooders are constructed on the same principle. Write us a postal now, to find out all about both. Thousands in use—we'll show you many letters. But write now.

1st Street, Wayne, Nebraska.

Golden Wyandottes McDANELL WINS

OLD HOMESTEAD FARMS

J. H. McDANELL, PROPRIETOR

ROUTE 2, WARSAW, KENTUCKY

AT THE GREAT CHICAGO SHOW

Here they meet—the most brilliant and successful show of high class Golden ever cooped in America. Golden the great attraction at the big show.

First cock, silver cups for best shape male and female, special for 4 best cockerels, two cockerels, two hens, silver cup for best display, first pen and many other regular and special prizes. Farm raised stock. Eggs booked now. Catalogue free. Write your wants.

house you will find on neck, most likely under the throat, on back directly between the wings, and on the body near the vent. Apply a drop or two of lard or butter and the lice are at sea for a time, only to appear in untold numbers again in about four days. Remember, it's a constant fight with lice if you raise turkeys. No turkey poult can live when covered with lice. If you will apply a small quantity of lard at night on the poults and dust the hen well at the same time with some reliable insect powder, the lice will certainly be com-

and must be allowed their wild habits. Feed them but little and keep them free from lice and you should be able to raise the larger per cent you incubate. Salttillo, Indiana. J. C. Clipp.

IS IT A FREAK OR FRIGHT?

You, or some of your readers, may be able to answer the above question. In a brood of nine chicks is one which failed to feather out like the rest, and thinking possibly that lice were the cause, gave him, her or it an applica-

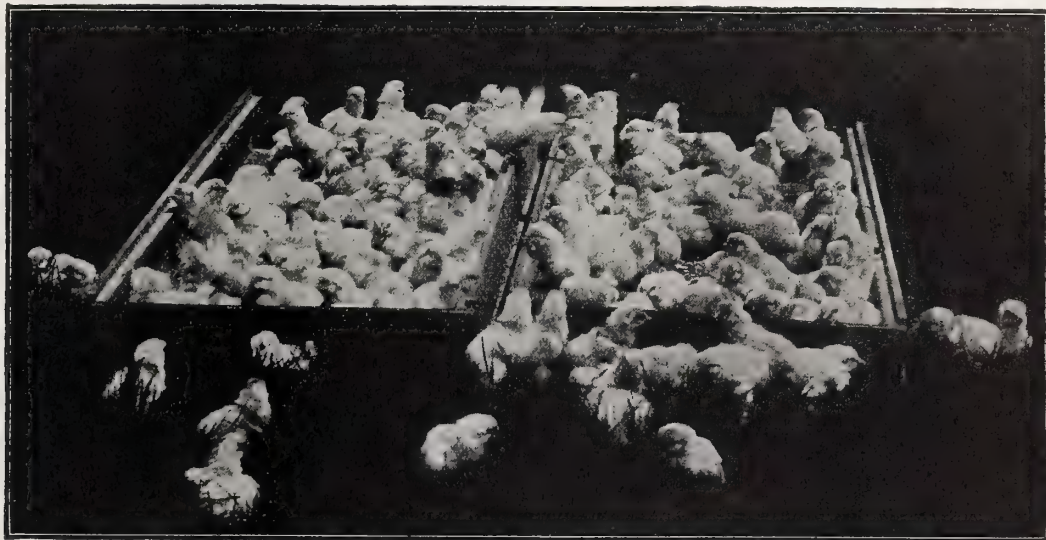

was hatched in June. I will not make arrangements to start a dime museum until I give Journal readers a change to compete. Hoping to learn whether there is a cause for this freak or whether nature has made a blunder like common mortals, I am,

Yours truly,

C. E. Goodwin,
Ashtabula, Ohio.

Chickens Feast at Night.

Every night about two dozen chick-

A SINGLE EARLY HATCH OF LIGHT BRAHMA CHICKS, RIVER HOME POULTRY YARD, PERRYSBURG, OHIO.

pelled to vacate for a short time at least. Never under any circumstances house your poults or turkeys of any age. Of course, you will be compelled to coop the poults at night until they are old enough to fly up on fences or trees, and then never house them any more. I never house my turkeys, regardless of the weather, except sleety weather, when the rain and ice freeze on the feather; in that instance I drive them in an open shed or a large, roomy stable, but never house them. If weather is dry, cold, or even snowing, turkeys will keep much healthier if allowed to roost out in the open. Turkeys are very wild in nature,

tion of equal parts of coal oil and sweet oil, with a few drops of crude carbolic acid added. The body is more than half bare, with one or two stub quills in each wing, the right one being elevated from the body. The right wing, I think, is raised by a drawing of the skin caused by the crop being located a little to that side. The oil was applied twice on the head and under the wings, followed each time with an application of lice powder. At one time the bird (or "it") looked as though there were stumpy feathers starting on the back, but there are no signs of feathers there now, August 9, and "it"

ens at Walkersville, a suburb of Shelbyville, Ind., fly from their roosts when the electric lights are turned on, and for three or four hours they catch the bugs that fly around the lights. These chickens have been working overtime for two weeks and have been attracting considerable attention.

Did you ever see any better White Rocks than Halbach's?

Easling, as usual, "all the way" in the White Leghorn alley.

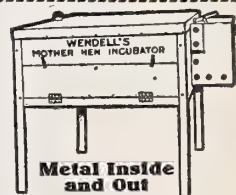

We lead, others follow.

Mother-Hen Incubators and Brooders

Our Incubator is covered with galvanized iron inside and out. It is padded on the inside and out with asbestos board and paper. It holds the heat, saves oil and maintains an even temperature—you don't have to set up nights with it—self-ventilating. If you want a cheap machine don't bother us, we are busy. Our BROODERS are the first invented that provides a warm flannel to lay on the chicks back—mother-hen. No steps to climb, no crowding, all metal. Send for our Book No. Z "The Incubating and Brooding Question Solved."

AUTOMATIC HATCHING COMPANY, Holly, Michigan

WHITE ROCK WINNERS

Madison Square, Jamestown, Indianapolis, Chicago, Toledo and Detroit

My birds have won and won well at these and many other shows for many years. All the stock I offer you are the progeny of winners, so were their grandparents and great-grandparents. I have an unusually good bunch of old and young birds fit to show anywhere. I am quoting special prices for this month on a few yearling hens and a large lot of good breeding cockerels and pullets in order to make room for my breeding pens. Remember, everything sold guaranteed to please customers or may be returned at my expense. Write today for special prices, show birds or breeding stock. Send for my fine 32-page illustrated catalogue, free for two two-cent stamps for postage.

LYMAN H. HILL - - JACKSON, MICHIGAN

"REGAL" WHITE WYANDOTTES.

A Visit to the Home and Yards of Mr. John S. Martin at Port Dover, Ont.—The Stock and Their Winnings—A Strictly Fancy Plant That Has Made A Reputation and Brought Fame and Success to the Owner.

By H. P. Schwab.

THERE are several places on the poultry map that have particular interest for the poultry fancier. The States have their full share, each has its special claims to the fame of some of its breeders. We can name several where the poultryman's interests are the principal feature of the town, and where yearly the eyes of the poultry world turn to for news and with hopes of better things. But in these days there is more than the States to consider, for along our northern boundary lays the Dominion of Canada, which has been long and favorably known for the quality of its breeders. We have before referred to the Canadians as being intensive fanciers and breeders, and this same claim is made here. Their success can well be traced to detail, of which they are masters, and after again for the third time viewing their great "Ontario" show are free to say that for the amount of birds grown they surely produce a great number of very high grade birds.

The extent to which the poultry breeders of Canada have succeeded is but barely known over here, simply on account of the failure of the breeders to advertise and to show their birds with us. There are some exceptions to

this rule, and these exceptions are the ones that have made the greatest success among all the Canadian breeders. Foremost among these we can well men-

tion the line, and in most foreign countries, and you will find that the "Regal strain" is well and favorably known. For many years we have met them at

tion Mr. John S. Martin, of Port Dover, Ont., originator and breeder of the "Regal" White Wyandottes.

Go where you will on either side of

some of our best shows, either shown by Mr. Martin himself or in the hands of customers, and in every case have found them a credit to the fancy and

A THING OF BEAUTY AND JOY FOREVER NOFTZGER'S PARTRIDGE ROCKS

Can you imagine this most beautiful bird with its feathers most beautifully and delicately penciled with dark brown on a mahogany brown, making a rich chestnut coloring effect with a beautiful sheen that shines like satin? If you can imagine this, then you know how beautiful they are, and then you will want to go to the originator of this breed to secure further information. He breeds the best there is, as is proven by the fact that he

Won Again at the Big Chicago Shows

all first and second prizes, also 3 thirds and 3 fourths. He not only has a few good birds but hundreds of them, and he has less culls and more show specimens than are found in the average flock of thoroughbreds. To this fact many can testify. Judge Zimmer and others have remarked about this fact in visiting his yards. Remember this, also the fact that they are great layers, docile, easily confined and embody all the good qualities of any other variety of the Rock family, and we think you will decide you want **PARTRIDGE ROCKS**. Naturally you will want stock from the originator. He is just issuing a handsome illustrated book telling all about these fine birds, giving history, etc. Send for it today. Hundreds of birds for sale. Mated trios and pens. Write for prices.

S. A. Noftzger, North Manchester, Ind.

the breeders. Right here in this is the foundation of the success Mr. Martin has made and which he so richly deserves.

We have long wanted to see the "Regals" at home, so this year on our annual visit to the "Ontario," Canada's greatest show, we arranged to go a day ahead, and now feel amply repaid, for in that day's time had the opportunity to inspect one of the very best flocks of White Wyandottes existing today. We were so well interested in this line that just 19 of the 24 hours were spent in examining the birds and in talking chickens.

On the home place we saw about 800 birds and close to 300 on a nearby farm. The general average was excellent, all showing the most careful breeding and handling. Wyandotte type being foremost, closely followed by color, here also as a general feature combs and eyes need mention. A strong eye, with good head points on White Wyandottes in particular, are a feature not always noted, but when had are a most desirable feature and of special value to the flock.

We here personally handled some 150 birds. Many of these were sold birds being conditioned for shipment, and also close to 50 that were being fitted for some great show. From these we have selected some for a special mention, but most of our remarks will apply to the general flock as seen, so that the reader can best judge of the "Regal" quality as whole: Crusader 111.—Cock A, cut of which is seen in Mr. Martin's advertisement, was one of the first to attract our eye. This noble fellow has made his mark in the show room and fully deserves all that the editors have said of him, along with snow white plumage he has the perfect Wyandotte type shown in the cut, grand in breast, back, body and tail; in fact we failed to note a defect in his formation. The tail has the Martin finish that just suits our ideal. Comb well set, fine shape and typical. These same characteristics were strongly bred in the 12 to 15 sons of him we also handled. They were alike as could be and promise to perpetuate the Crusader line with more honors for the future.

Besides this noble cock we handled 10 or more others that were being fitted for the show pen and breeding yard. We would here also mention the yearling cock that won first as cockerel at the 1908 Ontario, head points ideal, beautiful breast and back, and a tail that for shape and finish was as grand as we ever hoped to see. These cocks are not only full and deep, but also have a width of body that conforms with their depth. The first New York State Fair cockerel was here in a roomy pen. Here again shape, with extra size, appealed strongly to us; he is a grand big fellow of the rarest kind, his every line a feature, comb beautiful, strong red eye and pure yellow legs. In the next three pens were seen other cockerels, never shown, that are coming rapidly, and that will show strong in January.

One of the first pens that greets the visitor in the long house contains 14 hens that were at this time being groomed for the show. Here were winners with long records and others equally as good awaiting their call to prove their quality. The next pen contained 12 hens, while the two following pens each held 12 pullets, all being

groomed by the hand of the master, and every one of type and quality. Among these four pens of females Mr. Martin pointed out winners of the past. Here we again saw the second Boston, 1907, pullet as a beautiful hen; the great Ontario winners of last year, as well as the New York State Fair winners of both this and last year. In both type and color we found here all that is desirable. This added to the "Regal" characteristic of head points, including strong eyes and extra good colored beaks and legs, will always prove them to be strong contenders in any company.

Other males and females in the

colony houses and those still out on the range were of the same high grade quality. It simply was seeing a carefully bred flock along Standard lines that have most satisfactorily answered every condition imposed upon them. They fully combine every quality desired, and this kind of breeding has brought Mr. Martin fame and success that is so well deserved.

Mr. Martin's show record is a long one. For years he has either shown or sold winners for many of our best shows. His ten-strike has been made at the New York State Fair. During the past four years here he has won 20 first prizes of a possible 24, and 49

1. No extras to pay for. Comes complete, ready to use.
2. Automatic regulator—FREE.
3. Automatic ventilator—FREE.
4. Metal Lamps; Egg Testers; Thermometer the best made, to get the most strong chicks—FREE.
5. See free catalog for the whole story of Ideals.

other regular prizes, and for three years has also won first display. At the "Ontario," Guelph, Ont., December, 1907, and December, 1908, he won every first prize offered (eight), six of the eight seconds and four of the eight thirds, also four \$50 challenge cups, three silver medals and nearly all other specials. Of his winnings at Boston, January, 1907, Mr. Martin in his catalogue says:

Boston, Mass., Jan. 14-20, 1907.—At the National White Wyandotte Club Show nearly \$500 was offered in specials, which brought out a wonderful class in numbers and quality. Regal IV., by defeating the champion males of the United States and Canada, has justly won the title "World's Champion." He won first prize, shape special for males, and several other specials. The committee of judges also awarded him the Bronze Vase, presented by the Japanese government, for the best bird in the show; 5,000 birds on exhibition.

I was also awarded second and special on pullets, and commended on cockerels. Here I only entered seven birds in the open classes, and to be eligible for best display I should have entered ten. However, I received 6 points more than the exhibitor who won the prize for best display.

Of "Regal IV." Artist F. L. Sewell says:

"In looking among the long rows of Wyandottes at the last Boston show for typical specimens with which to illustrate the new issue of R. P. J.'s Wyandotte book, we marked the first winning white cock as one of the nearest ideal males that have ever appeared at Boston. This grand old bird was selected by the judges as worthy of the special for best bird in all the Boston show of 1907, the award being the fine bronze vase given by the representatives of the Japanese government."

This is the best part of the Regal winnings since 1908, and they are only a duplicate of their earlier show record. Mr. Martin is now preparing his annual catalogue. This catalogue will contain further information of this line and should be in the hands of every breeder of White Wyandottes. We have for

years known Mr. Martin as a personal friend, we admire him as a man and as a breeder, and in particular for what he has done for the good of the general poultry interests.

THE VALUE OF TRAP-NESTS.

The benefits derived from trap-nesting your flock are many. The foremost reason for the use of trap-nests by fanciers and practical breeders is for selecting the best layers and then breeding from only those which show a persistent tendency to lay.

There are many other good reasons in favor of trap-nesting which are applicable to the utility breeder as well as the farmer. To those unfamiliar with trap-nesting, it seems a great bugbear and laborious work. True, there is work to it, but nothing worth while was ever accomplished without a certain amount of work. The poultry business in general is no exception to this,—it is largely made up of detail work. For that reason we would not advise the installing of trap-nests by a person who is not willing to be "bothered" with the care of little things. Neither would we advise anyone who is of too anxious or "fretty" make up to use them. They would wear themselves out with too much anxiety and elose attention.

By the use of trap-nests the drones can be easily detected and weeded out of the flock and marketed, which will prove much more profitable than feeding them. The hens laying small or imperfect eggs can be culled out and placed in a pen by themselves. At the breeding season their use is invaluable to the careful breeder. The pleasure and profit of becoming on familiar terms with your hens is incalculable. If not already tame, they very soon become so and experience has taught us that hens that are tame and easily handled lay more eggs than the wild and "scarey" ones. In small flocks it ought to be as easy to pick up one of your fowls as it is to pick up the family cat. You also discover by handling your hens if any are seemingly too light or too heavy, and you

can watch them and ascertain the cause.

Trap-nesting gives the very best opportunity to look over your flocks for lice, etc. and dust them frequently. It is much easier to keep them free from lice by frequent dusting in this way and it is a much saner way than taking the whole family out to the hen house after dark with a lantern and a big "Hurrah" about once a year and half doing a job, the effects of which will not last more than two weeks, when the "nits" begin to be in evidence again. Eternal vigilance is the price of freedom from lice.

Interest the children on the farm in the poultry and as soon as they are old enough to read the numbers on the leg bands, they can be pressed into the service of looking after the trapping. It will fascinate them. Trap-nests are not expensive. The most ideal kind are easily made from boxes and can be placed anywhere. It does not take a carpenter or mechanic to make them either. Get one of the boys who is handy with tools interested and he will find much pleasure in the work. These nests are easily locked back and can be used as open nests at any time. In fact the trap-nest takes the place of all your old time nests and takes hardly as much space. We find also that the hens like them. It is a case of "one at a time," and they seem to enjoy the seclusion which the trap-nest affords. The use of them eliminates the egg eating habit from the flock. Broodiness can be discouraged or encouraged by their use. To the large or small breeder the trap-nest is an indispensable poultry house appliance, and once used will be found ideal in every sense of the word.

(Miss) Jennie C. Jones.

Paris, New York.

Fred Styers, Greensburg, Ind., the well known Columbian Wyandotte breeder, is advertising birds of real quality in this issue. Mr. Styers has won more prizes on birds of his own breeding at New York, Boston and Chicago than any breeder of this variety, and he is prepared to supply eggs for hatching from the best matings he has ever had. Write him for full particulars and mention American Poultry Journal.

**BROODS
LIKE A
HEN**

The LULLABY solves the problem of brooding. Practical poultrymen pronounce it the finest brooder they have ever seen and those who have tested it say that they have been unable to secure as good results with any other brooder they have ever used. It is adjustable and grows with the chicks, taking care of them at every stage from the incubator to the colony coop. It is adaptable to every condition of poultry raising

and is just as valuable on large plants as on small ones. It will brood the chicks through the coldest winter weather out-of-doors, simply by providing a water-proof box to keep out the wet and snow. No other brooder is so sanitary. Your insurance rates are not affected in the slightest by its use, because no artificial heating of any description is required to operate it.

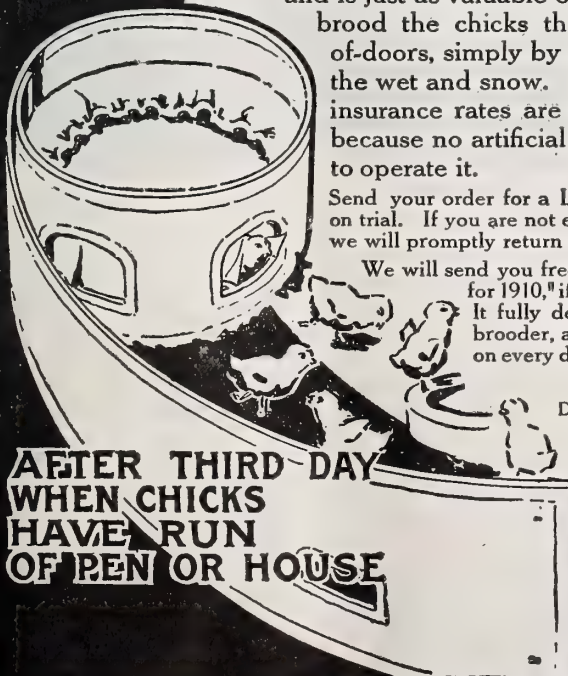

Send your order for a LULLABY BROODER on trial. If you are not entirely satisfied with it, we will promptly return your \$1.50.

We will send you free our "Poultry Almanac for 1910," if you mention this paper. It fully describes this wonderful brooder, and gives expert advice on every detail of poultry keeping.

Fishel's White Plymouth Rocks

The Best in the World

The name Fishel is a synonym for the "Ideal" of perfection as found in the standard White Plymouth Rock of today. On another page in this issue will be found a full page illustration of a prize-winning pen of White Rocks showing the ideal type as will be demanded for the White Rock in the new standard.

Mr. Fishel being a specialist of this variety and a breeder for the past seventeen years, it naturally follows that he should have the best that could be produced in this variety. That he has succeeded, the full page illustration in this issue will bear out the statement that he is justified in his claim of "The best in the world."

Note the desired long back and the correct carriage of the tail for which breeders have been striving for years.

unknown among the birds at "Fishel-ton." In the office also is to be found "system." Everything passes through Mr. Fishel's hands and receives his careful and prompt attention. No detail, no matter how small, ever escapes his watchful eye.

To this one word, "System," we attribute the wonderful success which Mr. Fishel has attained in his business of producing his "Best in the world" White Rocks, and he personally selects and superintends the selection of every bird which leaves his farm. He has made shipments to thousands and thousands of satisfied customers throughout the whole world during the past seventeen years which he has been making a specialty of this deservedly popular variety, having shipped birds to Alaska, Australia, New Zealand,

ailments with which poultry is liable to be afflicted.

In his ad, to be found elsewhere in this issue, on page 1037, he is making a special drive on 1,500 choice breeding and exhibition cockerels of the new standard type, and if you are in need of a cockerel for improving your flock here is your opportunity. He is also prepared to supply you with mated trios or pens.

You will find his ad appearing regularly in the columns of the American Poultry Journal and by addressing your inquiry to U. R. Fishel, Box A, Hope, Ind., you will receive a prompt reply to same.

DOES IT PAY TO USE TRAP NESTS?

How can anyone make a success of the poultry business by selling the 200-egg hens to the butcher and keeping the 25-egg ones to breed from, or by keeping a lot of hens that have never paid their board and never will? To make a long story short, how can

First prize S. C. Black Minorca cock at Illinois State Fair, 1909.
Bred and owned by W. O. Chase, Hillsboro, Ill.

First prize R. C. Black Minorca cock at Illinois State Fair, 1909.
Bred and owned by W. O. Chase, Hillsboro, Ill.

Anticipating in advance that a change would take place in the new standard, he has bred that desired quality into his strain for the past several years, and he has this past season produced 12,000 birds of this type, and one thing that is noticeable is that you can always tell a Fishel bird when you see it because of the Fishel type which is stamped in every individual bird throughout his entire flock.

Mr. Fishel has probably started more people in the breeding of White Rocks than all other breeders combined, and has furnished more birds that have won in the hands of his customers throughout the country than any other specialist of this variety and his large 120-acre farm is taxed to its fullest capacity, and some 200 buildings are required to house this large flock of birds, and eight men are actually employed in the caring for them, to say nothing of the help required to take care of the extensive mail received daily.

Cleanliness and system prevail everywhere and sickness is practically

Java, Germany, England, South Africa, Japan and China, and he could justly claim "The sun never sets on Fishel's White Rocks."

The success of Mr. Fishel could not have been made and the sales to these various people throughout the world would not have been consummated had he not been a generous advertiser in the various poultry publications. In fact, his success is mainly due to his being a persistent advertiser and a user of large advertising space.

He was the first poultryman to commence using full page advertising space and he not only uses large space but he is a believer in and uses the best printed matter in following up his inquiries. He issues one of the hand-somest catalogues of any breeder of fancy poultry, and asks you to send two dimes for this catalogue, but it is well worth it, as it is a veritable mine of valuable information for the poultry breeder. Not only does it contain fine articles on "how to care for poultry" but it also has many of Mr. Fishel's own tried remedies for curing various

anyone make a success of any kind of business by throwing away money? It will be money in your pocket to look up Geo. Stirdivant's ad. on another page.

A HUMMER.

Actual Tests Prove

Powell's Way to Poultry Profit

We put you on the best road to poultry profit, without your spending one cent for the book that has done it for others and will do it for you. Edwin C. Powell's Book, "Making Poultry Pay," is not based on theory—

It is the written experience of a man who has made money by raising poultry. He wrote a book embodying his successful methods. It is now possible for you to get Powell's information and advice, which is an unfailing source of profit, without any expense whatever.

\$1.00 Profit From Every Hen

Mr. Powell in detail gives the income and production of an average hen. These figures are the result of many years' experiment. Before writing his book he confirmed his ideas by years of actual tests. It is an authentic work by a real poultry grower.

WHAT THE BOOK TELLS

What profits to expect. How to take care of fowls. How to select eggs for hatching. How to get eggs in winter. How to pick the best layers. How to feed fowls and chicks. How to hatch and raise chicks and turkeys. How to make big, fat capons. How to build poultry houses. The best breeds to keep. How to keep eggs 10 months. How to keep ducks and geese. The secrets of turkey raising. How to raise squabs and pigeons.

OVER 100 ILLUSTRATIONS

Powell's Plan is Practical

He has studied the principles of the poultry business, has applied them to his entire satisfaction, and the increase of his bank account. *Not a line of theory, but a book full of sound, practical, tried-out advice.*

THIS GREAT POULTRY BOOK and FARM AND HOME 3 Years

All for \$1.00

or "Farm and Home" one Year and Book 50c.

Farm and Home is just what its name indicates—a spicy, practical, up-to-date, twice-a-month magazine. It covers everything that pertains to the farm or garden—big or little, in country or village. The best and most reliable information on household problems, cooking, home-made contrivances, fashions, dressmaking, embroidery, etc. It interests and meets the requirements of the entire family.

Farm and Home is published the 1st and 15th of each month at 50 cents a year. You can thus appreciate the big value in our offer. If your order reaches us before February 1st, 1910, you will also receive our great **Poultry Annual**, covering every phase of the industry, which appears on that date and exceeds in quality and quantity any 300-page book which would sell for \$1.00 to \$2.00. The regular **Poultry Department** in every number of **Farm and Home** is invaluable to all interested. The **Seventy-two numbers** in a three years' subscription to **Farm and Home** make three volumes of over 2000 broad pages. No better proof of the popularity of this semi-monthly can be offered than its immense circulation—upward of three million readers. **Your money back if not satisfied.** Remit by post office or express money order, check or draft at our risk; or if more convenient send dollar bill or one-cent stamps. Address office nearest you.

NATIONAL PARTRIDGE WYANDOTTE CLUB.

The first annual meeting of the National Partridge Wyandotte Club, which was held in connection with the Great Mid-West Poultry Show, in the great Coliseum, Chicago, Illinois, December 10th, 1909, was called to order at 3 p. m., with President C. E. George, in the chair, the following responding to the roll call: First vice-president, Earl Henry; secretary-treasurer, Wm. Erfurth; W. A. Doolittle; Dr. C. M. Baskerville; H. B. Hark, manager, Hartman Stock Farm Poultry Yards; George Peterson, W. H. Milward, August Bloese and W. Rodman and Son.

Motion made and unanimously carried, that the secretary-treasurer communicate with the secretary of both the New York

and the Wisconsin State Partridge Wyandotte Clubs, urging their consolidation with the National Club; as a special inducement, the members of said clubs to be admitted to membership into the National Partridge Wyandotte Club, upon the payment of \$1.00 each, which will include the annual dues for the ensuing year.

A motion was made by W. A. Doolittle and seconded by Dr. C. M. Baskerville that the secretary-treasurer, Wm. Erfurth, be appointed election commissioner, for the ensuing year; motion carried by a unanimous vote. W. A. Doolittle suggested that a special fund be raised by a subscription offering of the members present, said fund to be used at the discretion of the secretary-treasurer, for the purpose of continuously advertising the club by circulars, etc., same to be furnished to each member, who will be kindly asked to favor the club, by enclosing said circulars with their personal correspondence pertaining to their poultry business, such as their annual mating lists, catalogues, etc., as a means by which to increase the club membership, also adding prestige to their personal standing in the poultry fraternity; the suggestion was well taken, and a fund of \$50.00 was subscribed by the members present.

C. E. George and W. A. Doolittle were tied on a \$5.00 prize. As a settlement they jointly donated same to be used as a special premium at the next club show.

A committee of three were appointed to draft said club circulars, etc., consisting of President C. E. George, Secretary-Treasurer Wm. Erfurth and W. H. Milward.

A motion was made and unanimously carried that a club cup be offered at every state show, in each state, where the club membership was ten or more.

A motion was made by W. A. Doolittle, and seconded, to extend a vote of thanks to President C. E. George and Secretary-Treasurer Wm. Erfurth, for their efficient services rendered the club. Motion unanimously carried by a rising vote. A motion to adjourn was made and carried.

"PUT ME OFF AT BUFFALO."

Over 800 poultry shows in America this season, but the Great International to be held in Buffalo January 24-29th, 1910, is the only one that is truly international in character and management.

The Canadians are coming over strong, and "Miss Canada" expects to carry back a good share of the cups and cash specials, even though "Uncle Sam" should make a courteous attempt to hold his own in the battle for the blue.

Small flags placed on each exhibit, after the judging is done, will help the visitors to readily distinguish the birds of each country which are sent to this show to uphold the fanciers' reputation in this international tryout.

Originality which has characterized this show management in all its doings reaches the climax in its premium list, 5,000 of which have been sent to the leading fanciers of both countries, who have asked for them.

Those who do not join in the chorus, "Put Me Off at Buffalo," for the Great International will miss a grand old time.

Change of copy is equally as necessary to successful advertising as change of linen is necessary to an immaculate appearance.

Be sure you're right—then advertise.

Chas. A. Cyphers

My Promise to You

I promise you that my new low-priced 1910 BUFFALO INCUBATOR equals any high priced incubator, yet it will be sold for about half the price.

In my 20 years experience as a manufacturer of highest grade incubators, I have never talked price, but always quality. Now it is quality and price.

Often have I been urged to put a cheap incubator on the market, but I could never see the honesty of offering two grades. Invariably I have replied, "When I can make as good a machine as has always been associated with my name and sell it at a low price, I will stop manufacturing the high price machine."

That time has come. It is here. The new Buffalo IS such an incubator. New material and new methods of manufacturing have made the new low cost Buffalo a possibility.

My old wood-working machinery was scrapped. In order to reduce every item of manufacturing cost to the minimum, I even secured a new factory site, thus effecting a saving of \$12,000 a year on the one item of teaming, and other economies in proportion. My new factory is built with the sole view of giving the new Buffalo Incubators and Brooders, Chas. A. Cyphers quality, at half the former cost to my friends and customers.

Construction of the Buffalo.

The New Buffalo Incubator is made of sheet metal and fibre board, indestructible and fire proof, instead of built-up wooden panels—a saving of one third in labor and one half in factory room and machinery. This tremendous cost reduction means big price saving for you and gets an incubator as substantial and as well insulated as any I ever constructed.

Tested Principles Retained.

I have retained the diffusive heating and ventilating system made famous by my former non-moisture designs. The regulator combines the best principles of former regulators; if anything, it is still more accurate and reliable.

The lamp has a self-feeding fount. The burner is on the lines of the notable blue-flame oil burners, and it is so constructed as to be so efficient that it is necessary to touch this burner oftener than once in three days—a saving in time and labor.

Outdoor and Indoor Brooders.

In addition to the New Buffalo Incubator I am manufacturing a complete line of Colony Brooders—the best I ever made, irrespective of cost. Yet they cost one-third less than any I ever made before. The temperature in the nursery is regulated automatically—a thing I have never been able to accomplish in other brooders. I predict that the New Buffalo will be the most popular brooder ever offered poultrymen.

Note These Prices — Atway Below

What You Ever Before Paid for My Incubators and Brooders.

* 50 Egg Size Buffalo Incubator	\$ 8.00	Buffalo Colony Brooder	- \$10.00
* 100 " " " "	11.00	Buffalo Indoor Brooder	- 7.00
* 200 " " " "	15.00		

*The incubators are underrated somewhat, as I give half a square inch per egg more than in my previous machine.

Write me about my complete line of portable, waterproofed Colony Houses, Incubator Houses, Brooder Houses, Summer Cottages, Garages — and everything for the best and cheapest poultry equipment that can be put up.

I want every one of my quarter of a million poultry friends and every owner of a Model, Cyphers or Prairie State Incubator to write me to-day for my advance circular on my new Buffalo Incubators and Brooders. I will inclose with it Bulletin No. 2, which tells of a new poultry discovery.

CHAS. A. CYPHERS, President Buffalo Incubator Co., 4700 Ellicott Square, Buffalo, N. Y.

SELF-REGULATING FURNACE.

Below is an illustration of the Hall Furnace, that is built for brooder house use. This is a hot water heater and is used for long pipe brooder systems. Hot water for brooder systems is a healthful heat for the chicks, and furthermore hot water is less easily affected by the changes of atmosphere in the brooder house, and therefore a more even temperature is maintained in the hovers. The economy of burning coal in a Hall Furnace rather than using individual oil lamps and buying the oil, is a saving every poultryman should consider. And when

the poultryman stops to think of the labor a brooder system will save him, his decision must be in favor of the long pipe hot water system. With it there are no lamps to fill with oil, no wicks to trim, and there are no fumes of burning oil,—and the worry of oil fires. Nothing saves the labor as a hard coal, hot water Hall Furnace.

Coal is a much cheaper fuel than oil, and much safer.

These Hall Furnaces are self-regulating and control the temperature of the water in the pipes to within a variation of one degree. The expanding of the warming water or the contracting of the cooling water controls the regulation of the fire. This method is exceedingly successful. The "Hall" was the first and is the original Self-regulating Water Furnace. These furnaces are sold separately. The Hall catalog describes them, and a copy of it will be mailed free to you on request. You should send for a copy of this new book, as it tells of the successful Hall Brooder System and Hall Mammoth Incubator, as well as the heaters. The Hall Com-

pany is also getting out another new book on the Brooder System and Furnaces, and in writing do not fail to ask for this new edition to their literature. Address the Hall Mammoth Incubator Co., South Columbia, New York.

A REMINDER.

Farm Poultry, Western Poultry Journal and American Poultry Journal can again be obtained for one-half price or 75 cents. If your subscription is about to expire you better renew now, as we do not know how long this offer will last—\$1.50 value for 75 cents. Send your subscription to American Poultry Journal Publishing Company, Chicago, Ill.

HOVER CLOSE-TO-NATURE BROODER

A scientific invention very close to nature. Three life principles found in no other: Warmth by Conduction; Ventilation by Induction; Non-Piling-up by Construction. Brooders for orchard and field and Independent Hovers for instant use in box or shed. Not playthings or dollar

"Systems" but big double brooders and Hovers. Practical and successful. Double tops, triple floors and many other great improvements. Need little attention. Eminently the brooder for the busy man and the farmer. Given a most remarkable reception by scientific and successful poultrymen. Brooder Book Free.

CLOSE-TO-NATURE COMPANY, COLFAX, IOWA.

J. C. FISHEL & SON, TWO OF INDIANA'S MOST POPULAR POULTRYMEN AND BREEDERS OF FISHELDOTTES—WHITE WYAN-DOTTES.

When it comes to producing Wyandottes of standard requirements and quality the Fishels loom out promptly in the poultry world. Their one aim has always been to breed this variety as close as possible to standard points, and this year they have succeeded beyond measure in producing that desired quality in their flock. Over three thousand birds are now ready for the show room and the breeding pen.

The Fishels have made some very big sales this last month and have supplied winners to many shows in this country. The beautiful illustration of the pullet appearing in this issue shows the fine type that runs through their strain and which approaches so closely to the new standard of this variety.

Their birds are as white as the driven snow. The Fishels have not only tried to improve their fowls from the fancy standpoint, the utility side has not been lost track of and their birds are noted as extraordinary layers. Their birds are raised in ideal conditions, being under the personal supervision and watchful eye of both J. C. and Charles I. Fishel; housed in sanitary buildings they mature fast and attain their growth quickly, making a strong, vigorous bird in a very short time, thus fitting them better for breeders and layers.

Both of these gentlemen devote their entire time and with the assistance of Miss Marguerite Fishel, who acts in the capacity of stenographer, every detail of the business thus comes under their personal supervision and receives their careful attention.

J. C. Fishel is one of Indiana's oldest fanciers, having bred fancy poultry practically all his life and commenced advertising same as far back as 1879, therefore it is no wonder that Charles I. Fishel is a naturally born poultryman, and the old saying, "Like father, like son," repeats itself in this case.

Charles I. Fishel, though yet a young man, is rapidly being recognized as one of the prominent judges of fancy poultry.

Like U. R. Fishel, they believe in up-to-date advertising and always have been users of large space in the poultry press; the result of this advertising has been that they have made sales in practically every country on the globe.

Their catalogue and other advertising literature ranks among the best produced. Intending buyers will do well to send them a dime for their elaborate catalogue, it is well worth it. Addressing your letter to J. C. Fishel & Son, Box J, Hope, Ind., will bring it promptly.

ECHOES FROM EASTERN COLORADO.

In Eastern Colorado, with its treeless prairie, high winds and sunshine, the problem of housing poultry is one requiring time and experience. To obtain a house which is adapted to the extreme changes of weather and one that is capable of shedding the penetrating winds is the desire of every true lover of poultry.

My experience has been that a well-made, open front frame building does not answer the purpose as satisfactorily as a house built of sod. The roots of the Buffalo grass in this country are very tenacious, and when the sod is cut one foot wide, three inches thick and eighteen inches or two feet long, as desired, the blocks of sod laid upon each other (as brick is laid) with the sod turned down, making a wall eighteen inches or two feet thick, according to the size the sod is cut, and will turn the highest and most penetrating gale and the house will be snug and warm in winter and cool in summer.

The house should be built with an open front, as the poultry must have good ventilation, and there will be no drafts as the sod walls are so thick that no cracks admit any current of air.

The roof can be either a shed roof or car-shaped and made of twelve inch boards. These boards should be covered with tar paper, and on the paper should be laid blocks of sod (with sod next to paper) so that the roof has the appearance of being made completely of sod.

The inside of the house can be furnished as desired, but before inside arrangements are made, the sod walls should be trimmed smooth and plastered. A wind plaster made of sand and magnesia clay is what we use for sod buildings in this country.

The open front of the house should face the south and should be curtained to keep out the south winds. This is the kind of house in which my thoroughbred White Plymouth Rocks are enjoying themselves with six inches of snow on the ground outside, and I am getting as many eggs this month (November) as any month this summer.

Dudley K. Wilcox.

Keeping everlastingly at it convinces the public that you have faith in what you're advertising. Spasmodic, haphazard methods create a different sort of impression.

There is good advertising, bad advertising, and indifferent advertising. But there is only one kind that can be depended upon for results.

The shrewd advertiser can see over the rim of a silver dollar into next week and next year.

CARING AND HOUSING OF FOWLS
IN WINTER.

Winter is again here and during this period it is the poultryman's duty to look after the health of his flock. If he is crowded for room he should dispose of his poor stock, and if he is still crowded, he can easily and cheaply build a few houses for them. I have found the following described the best one for all purposes I have ever used. It is ten feet wide by fourteen feet long and is four and one-half feet high in the rear and seven and one-half feet in front. The west, north, and east sides are boarded up with six inch matched board. On the south side directly in the center is a hinge door, size two by seven feet; on both sides of this door, eighteen inches from the bottom, are windows, size thirty-two by thirty-four inches. Hinges are placed on the top of these windows so they can be easily opened, and in order to keep them open a hook is put on the side of the window. Eighteen inches above these, or one-half foot from the top, are frames size twelve by thirty-six inches. These frames are covered with muslin and placed on hinges in the same manner and for the same purpose as those on the windows. The roof is shingled. The

White Wyandotte cockerel, of this year's raising, showing the type of this variety as bred by W. R. Graves, Southboro, Mass.

floor is made of matched boards so that it can be easily cleaned or scrubbed. In order that this house can easily be drawn from one place to another it is placed on two, four by six inch shoes. The roost boards which are divided into two parts are placed on three horses (one on each end and one in the center) two feet in height. They extend from the west side till two feet from the opposite or east side. These two feet are left so it will be easier to catch the birds. The roosts are five inches above the roost boards, and are made from two inch pieces twelve feet long. In order to keep the fowls warmer at night a muslin curtain is placed above the end of the roost boards and during the cold nights this curtain is dropped before the birds. To keep the house still warmer the west, north and east sides and the ceiling are papered with tar paper.

If the house is used for cockerels no nests should be put in the building, as they then will be used by them as roosts, but if the house is being used for layers, or as a breeding pen, the nests should be put on the east end. A dark nest is preferred to a common box, because the hens

do not eat the eggs when laid in a dark nest.

As grit, charcoal and oyster shells are needed by the fowls, a box eighteen inches long, three inches wide and two inches deep, which is divided into three parts, is nailed on the west end about fifteen inches from the floor. This box is raised because it prevents the birds from wasting the food or from scratching the litter in the box.

On the south side a box containing Dustyne, which gives the birds much exercise and also keeps them free from lice, is placed. If the fowls have a house like the above and are provided with good, fresh water, and if the food is scattered in the litter, the fowls will stay in a healthy condition, and will be able to lay all winter long.

MAKE ALL YOU CAN.

While you are making some money at poultry raising, why not make all you can? If you are making a nice little sum of money with mixed breeds, under ordinary circumstances, why not raise pure breeds and be in a position to sell fowls and eggs for breeding stock? A nice flock of pure breeds commands admiration. They will, to a great extent, advertise themselves. Give them a little better treatment, and get from 150 to 200 eggs per year instead of 50 to 100 from the scrub under common conditions.

You can raise the scrub's egg record, but while you are at it expend your energies toward reaching the highest possible profits. The pure breeds are not only the most profitable, but they make your place or premises look better, give the owner more pleasure and cause him to give more of his time to the business.

Ask the owner of a scrub flock why he does not have some particular kind, four times out of five he will say the common chickens are more healthy. When he will

allow his house to get damp and his stock are not healthy by any means.

The first trap nests were a craze and the excitement soon abated. There were enough logical poultry fanciers who held on to the trap nests to start and maintain an improvement in egg yield. The trap nests serve a useful purpose. They are to poultry raisers what the Babcock test is to the dairyman.

Another reason for pure breeds is the evenness of market fowls and eggs. A coop all the same color is more attractive and will bring a better price, and the same with eggs.

Any poultry raiser that has one or more cases of eggs in a week can get from 15 to 35 per cent more by taking them to town and looking up some hotel or private market, instead of selling them to hucksters going through the country; they have got to have a profit and why not take them to town and save it yourself.

The poultry business once was carried on on the farm in haphazard way; and

customers could walk up and draw a satisfied breath.

Let me say here that after a grocery man has handled a few cases of eggs put up as I have suggested, the prices become secondary to that of keeping that kind of stock. The cleaner and more attractive appearance gives his store a prestige rather than making it an eyesore to tasty customers. There is nothing more handsome than a stock of clean eggs in attractive cartons. There is repulsiveness in a filthy stock of eggs.

H. E. Terry.

Blossom, Texas.

INDIANAPOLIS, IND.

The Fanciers' Association of Indiana now have their tenth annual show list ready for mailing. They are offering more silver cups and bigger cash specials than at any previous show of the association. Nearly every specialty club has offered a silver cup to be competed for by members of the club. The association will hold a combination show of poultry, dogs, cats and pigeons, and have secured as judges, Pierce, Tucker, Kummer and Zike on poultry, Bradshaw on dogs, and Ewald on pigeons. The association guarantees all its prizes and has the cash in the treasury ready to pay all regular and special cash prizes. For a premium list, write to secretary at once. C. R. Milhouse, secretary, Indianapolis, Indiana.

still so with lots of farms. And as no accounts were kept with this line of stock, the prices obtained were regarded as a satisfactory return for the small amount of care that had been bestowed on them. And so with lots of farm flocks now when if pure breeds and more care were taken there could be a great deal more made.

There is nothing we eat that goes on the market in such a haphazard, filthy condition as the poultry and eggs of this country.

Not by any means am I overdrawing. Consider it for yourself. No matter how old or besmeared the case, just so long as it will hold the eggs and remain together it will do. No attention is paid to smell of the egg fillers; no sorting for color or sizes; no attention is paid to dirt or to feathers sticking to the shells. Surely it would take a hungry person to fill up on such stuff, if he were the first to see them.

The most careless method is followed in marketing fowls. Take a walk into the market place and you will hardly take another. Right there we find fowls, and of all sizes and colors you ever saw, in the same coop. And a coop that has been used 6 months without ever being cleaned out. Don't see how the market man could stay there. And if he had clean coops, eggs put up clean, his business would be more attractive and his

IMPORTANCE OF POULTRY SHOWS.

The work done by the poultry associations throughout the country has no doubt done more to advance the interest of Standard-bred poultry than any one other factor. They have opened the eyes of the farmer, who is our greatest poultryman, to the value of Standard poultry. It is not so many years ago that the average farmer gave but very little attention to his flock of hens, keeping just a few which were generally taken care of by the housewife for the purpose of giving her a little spending money, or to buy the necessary groceries with.

The breed did not seem to make much difference, in fact they had no particular breed, perhaps did not know that there was any such thing as a breed; usually they were a mixed-up lot of any old breed; as long as they laid a few eggs they were satisfied. It was not a question of how many eggs they laid, for they had no idea how many eggs a hen should lay in the course of a year in order to be profitable; in fact, they did not think a hen was profitable, anyway.

But when the poultry shows began to be held, he went there as a matter of curiosity, wondering what they had there and what there was about a hen that they should want to put her in a show, for he opened his eyes when he saw the different kinds of fowls that were there, and began to ask some questions of his friends and neighbors about the different breeds, they looked so much better than his mixed flock of hens at home. He was told that some breeds laid more eggs than another, others grew to broiler age quicker,

still others made better roasters, some were good winter layers and laid the most eggs when the price was highest. He began to get interested and thought perhaps there was something in it. He saw some of his neighbors breed Standard poultry and the flock looked so nice and uniform and the eggs they laid were so even in color and size and they brought a better price than his mixed lot in the market, that set him thinking real hard and when a farmer thinks hard something is doing or going to be done.

The first thing you know he has subscribed to a poultry paper and he begins to read what others are doing with Standard poultry, and when show time comes around again he goes to the show and buys some stock, or he orders some eggs for hatching and he raises some Standard-bred chickens, and begins to keep track of the number of eggs they lay and how much money they bring in, and it surprises him that there should be any profit in just chickens, for instead of their bringing in just a little spending money they have paid off the mortgage on many a farm.

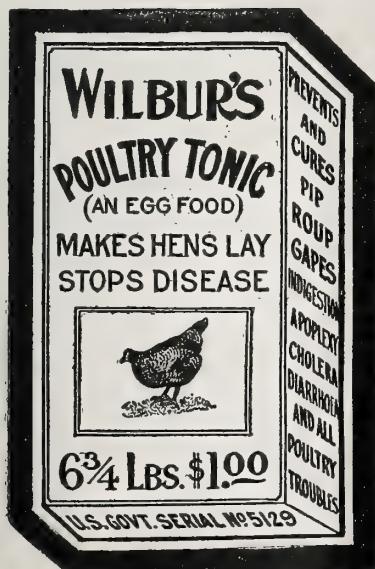

This is just the work poultry shows are doing; they are the greatest allies that the American Poultry Association has, and I would like to add right here that all poultry associations should be members of the A. P. A., as their interests are identical, both working for the same cause.

And the poultry publications which have grown so fast in numbers and have gained such an enormous circulation can attribute their growth in a great measure to our poultry shows, for our shows make the poultrymen and the poultrymen make our subscribers and advertisers. So don't be stingy with

your space when it comes to matters that are of interest to our shows.

Poultry shows are not always held at a profit, as a great many would suppose; in fact, the contrary is most often the case. The larger shows, such as Madison Square, Boston, Chicago and shows held in the largest cities of the country may show a balance on the right side of the ledger. This is due to the money received by them for space rented to incubator manufacturers and dealers in poultry supplies, who can afford to pay a good price for space at these large shows; and then the largest breeders show their stock at the most important shows on account of the importance of the award, so that the classes are very large, and the larger the class the more profit it would give to the association. Then the attendance at the large shows is so much greater in proportion to the smaller ones; the large shows attract attendance from a radius of many miles; in fact they draw attendance from the entire country, whereas the smaller show gets its attendance from its immediate neighborhood only, so that if the truth were known you would find that practically all shows with but very few exceptions, which have an exhibit of less than 2,000 birds are held at a loss, and it shows the true spirit of the poultry associations when they will continue to hold shows year after year, giving their time and work gratis, and then going down in their pockets to make up the loss. This tests the spirit of the true fancier.

The writer wrote letters to the secretaries of the more prominent poultry associations in New York state requesting them to state whether their shows were profitable or not, and in almost

To prove beyond all doubt to every intelligent poultry raiser that

WILBUR'S POULTRY TONIC

is the world's greatest egg maker, fattener and feed saver, and positively prevents and cures Pip, Roup, Gapes, Apoplexy, Diarrhoea, Indigestion and Cholera, we will actually give one full size \$1.00 package absolutely FREE, where we have no agent, to every reader of this paper who fills out and mails to us this coupon.

READ WHAT USERS SAY

Sanford, Fla., August 26, 1909.
Gentlemen:—Enclosed find M. O. for which please send me more of your Poultry Tonic. I would like to get the agency for your Poultry Tonic in this section or county. Last winter I bought some of your Poultry Tonic from your agent and I consider it the best article of the kind I ever used.
Mrs. H. H. CHAPPLE.

Otisville, Mich., Oct. 3, 09.
Gentlemen:—I have used several different kinds of tonic but find that Wilbur's leads them all for poultry. I am getting double the amount of eggs I got before. I have a good opportunity to sell your tonic in this country, as all the people around me ask how it is that I get so many eggs and my chickens look so good. My answer is "by using Wilbur's Poultry Tonic." I will use it as long as I can get it, for there is none better.

Express Off.....State.....

every instance their reply was that their shows were held at a loss and that most associations were discouraged and about to give up.

My object in asking for this information was with a view of getting an appropriation from the state to aid poultry associations.

Our association adopted a resolution at its last meeting urging the necessity for state aid and a committee was appointed to take charge of the matter. A letter was sent to the secretary of the New York state branch of the American Poultry Association and at their meeting held at Ithaca, it was referred to the legislative committee, who will make every effort to obtain state aid this fall.

I would ask every poultry association in New York state that believes the state should give some aid, to write a letter to Dr. E. M. Santee, secretary, Ithaca, N. Y., stating their reasons why; don't be bashful, but state just what you think, and why you think so.

I. L. Whitmyre.

Schenectady, N. Y.

TYPE AND COLOR IN LIGHT BRAHMAS.

I think it is an indisputable fact that the popularity of any breed of fowls depends on their productiveness and adaptability to general use. It is not so many years since Light Brahmas were bred in vast numbers, and were the largest classes in most shows, but now they are seldom seen only in the yards of some old breeder who has stood by them for many years, and except in the largest shows the classes are seldom filled, if, indeed, they are exhibited at all. There is a cause for this—a cause other than the multiplying of new and oftentimes inferior breeds—some, at least—the white-

skinned ones—that are not and never can be first-class general utility fowls. So we must look for a reason for the diminished numbers of this, the greatest and grandest breed of fowls that has come from the hands of the American fancier. Having been a breeder of these fowls for thirty-eight years—clinging to them through good and evil report—and loving them as well as in our early manhood, I have given the subject many hours of deep thought, and am fully convinced the trouble lays in their having been bred away from the true Brahma type. The Cochinzizing of the breed by so-called fanciers and false judging in our exhibitions has worked their undoing. The great preponderance of those in our present-day exhibitions are little else than Cochins sailing under Brahma colors; the distinguishing points being comb and back, the convex back of the Cochins have so far not been adopted; the short neck; the short body; the short legs; the loose, long feathering are all to be seen in the present-day Brahma. Their prolific egg production is a thing of the past, as it is a notorious fact that birds of Cochin type are the poorest kind of layers, and a good layer, in any breed, that shows the Cochin type to excess, is the exception and not the rule.

The American Standard of Perfection is supposed to be the law by which judges make all the awards, but is it? Too many judges seem to be a law unto themselves, they either don't know the type and color demanded by the Standard for Light Brahmas, or totally ignore it when judging. Let us see what it says in regard to the sections which go to make the type of the fowl, a type so very distinct from the Cochin type: Neck, moderately long; back, rather long; body, rather long; legs, sufficient length to properly balance specimen. Now, you see the word

"long" is used in every section in some form, and if it means anything at all, it means a Light Brahma should be a tall, long-bodied bird. Not like a game, but exactly the opposite from the Cochin type. Is this type distinction respected by the majority of judges at our shows, or do they judge to suit themselves? The highest prize-winners at our largest shows the past winter, I should say from what illustrations I have seen and from letters I have received, have little or nothing of the true type about them. Who is to blame? I should say, first, the authorities of every show should demand that the Standard should be rigorously applied, regardless of who the exhibitors are, or what type they prefer, or what type the judges think is best. If the Standard isn't right, then let it be changed. But it is right, and breeding to it will bring back this grand breed to its lost position in the esteem of the general breeder, as well as the fancier.

Now as to color, the Standard for male says the back shall be "white," but saddle hangers may be black in web if they are laced with white. Here is where there is a clash in the Standard. In the list of disqualifications it says except slight or dark stripes near the tail; and that is allowing all the license there should be for black in back, and those birds—winners or not—with the heavy striped saddle hangers are or should be disqualified in every instance, for the backs of such birds are black in the web of every feather, and while they may be immense in color as their breeders describe them, they breed disqualified females in nearly every instance. The only proper color is a white surface in back, with possibly a few dark striped feathers near the tail. The Standard is off also in description of the wing in female.

No breeder of today would use a female with a wing as imperfect as the Standard describes. The wing should be, and is, the same in the best specimens of both sexes, and should be so described.

I will welcome the day when the breeders of my favorites shall breed squarely to the type demanded by the Standard, for I am sure it means much for the future popularity of the Light Brahmas.

John Rumbold.

Baltimore, Md.

Silver Laced Wyandottes

WE LEAD, OTHERS FOLLOW—At the great Hagerstown Show, in one of the strongest classes of Silvers ever brought together, we won first and third pullet and fourth cockerel on four entries. Our winning pullet was pronounced by leading authorities to be one of the best birds ever bred. Eggs for hatching from the grandest matings at \$3 per setting. We still have a few choice cockerels in Silver and White Wyandottes at \$3 and \$5 each.

BROOKSIDE FARM
Center Moriches, L. I.

Speonk, Long Island, N. Y., Oct. 29, 1909.

Cyphers Incubator Company, Buffalo, N. Y.

The Mammoth hot-water Incubator that you installed for me in January 1908, has given excellent results.

The machine requires very little attention, as your regulators on the heaters do the work satisfactorily. We consider that we save over 50% in fuel and 70% on labor in operating as compared with the old-style lamp-heated machines. This saving of labor is quite an item on a plant as large as ours, as it enables the incubator operator to superintend the nurseries and rearing for the first six weeks.

With the eighty-three old style lamp-heated incubators we formerly used it required one man's entire attention for the filling and trimming of lamps, regulating the machines and turning and cooling the eggs.

The odor in the cellar with lamp-heated machines was very noticeable, while with the Cyphers Mammoth there is no appreciable odor nor vitiated air to stunt the growing embryo.

We hatched 49,000 ducks in the Cyphers Mammoth Incubator this year and we would have hatched more if we had had enough eggs on the home farm to keep it filled.

While we have a large capacity, we decided to increase it for next season and therefore have given you our order to install another thirty compartment section of 10,640 duck egg capacity. We are going to keep a proportionately larger number of breeders.

After using the Cyphers Mammoth for two seasons, my ordering thirty additional sections is surely ample proof of my faith in the work of the machine and I do not hesitate to recommend the Cyphers Mammoth Incubator to any one wanting a capacity of six thousand eggs or more.

Yours very truly, A. J. HALLOCK.

NEXT DOOR to Atlantic Farm Cyphers Incubator Company has installed a forty-compartment CYPHERS MAMMOTH for E. O. Wilcox, a man of twenty-five years experience in growing ducks for market on Long Island. Mr. Wilcox saw what Mr. Hallock's CYPHERS MAMMOTH was doing as a fuel and labor saver and SUCCESSFUL HATCHER, then discarded forty lamp-heated incubators of a popular make and put in the CYPHERS MAMMOTH. We are now installing three other Mammoth machines on Long Island and several of them in New York State proper, in Massachusetts, Ohio, Illinois, etc.

TEN OR A DOZEN MORE!—We shall be in a position to supply ten or twelve more Cyphers Mammoth Incubators this season, but not a larger number. *These machines are a demonstrated success.* Automatic in regulation, in ventilation and in moisture supply. Guaranteed equally successful with hen or duck eggs; both can be hatched at one time. Blue-prints furnished free with each machine. Full particulars on request. Address all correspondence on subject of Cyphers Mammoth Incubators to home offices of

QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Question—(1) Which are the best layers, especially winter layers, White Plymouth Rocks or Barred Plymouth Rocks? (2) What is the average weight of cock and hen of each variety? Is the standard weight different? (3) We have extremely wet winters here and medium heavy soil. Is the poultry house illustrated in Prize Article department of the November issue of American Poultry Journal a good plan for such a country? (4) Do you advise chicken houses with one side open, being only closed with wire netting? (5) How big should a house be to accommodate fifty Plymouth Rock hens? (6) Will a Plymouth Rock hen set as early as February or March as a rule? If not, about how early? F. K. P.
Wolf Creek, Ore.

Answer—(1) There is practically no difference in these two varieties so far as egg production is concerned. (2) Cock, 9 pounds; hen 7 pounds. The weights of both varieties are the same. (3) The house can be used in any locality. (4) Only in very warm climates. (5) 14x28. (6) No. April is the month when most hens, of any variety, become broody.

Question—Please answer through your paper the following. I have a fine hen which has been a good layer un-

til the last few months. She has always seemed healthy until about two weeks ago she seemed to stand around and ate very little; on examination I found a hard mass (about the size of a base ball) in the abdomen. I have just taken this mass out, and found it in the egg sac (?). The mass was very hard and formed in layers and looked somewhat like the yolk of a hard boiled egg, only more tough and fibrous. It also smells something like a boiled egg. Please tell me what this was. What might have been done and if she survives the operation will it be possible for her to lay again. (I removed the tumor through the abdominal wall and then cutting into the egg sac.) D. O.
Pinckneyville, Ill.

Answer—This was probably caused by a rupture of the egg sac, which produced inflammation and a high fever in the egg passage and caused the half-formed eggs that were released from the egg sac to bake and form into a solid mass. There is no remedy for this. This bird will probably never lay again should she recover.

Question—(1) Is the Potter system of selecting the laying hens a scientific method or trap-nest method? (2) My poultry has very good supply of grit

but not much variety of food; plenty of good water; some few of them get light and droop, but will eat, but they finally die. They have unlimited free range. What is the trouble and remedy? (3) The most of my young stock was hatched in March and April. They did fine until large as quails and they have grown slowly ever since. They seem not to do so well when we give them free range. How should we manage them next spring to keep them growing till matured? They were incubator chickens and we used the Philo system of brooding. (4) I clean out my brooder and poultry houses two to three times a week and scatter air slaked lime in them and all around where the chickens are apt to stay so much, and I plow up the yard very often. What is lacking in this part of the business? E. M. S.
Temple, Tex.

Answer—(1) Scientific. (2) Going light is nothing more nor less than consumption. See Dr. Salmon's book, "Diseases of Poultry." Price 50 cents. For sale by us. (3) We believe your trouble is caused by insufficient supply of food. Growing chicks should be given plenty of feed, even though they have free range. They soon become stunted if not given plenty of good food. Oats is one of the best feeds for growing stock. (4) Brooders and houses should be cleaned and aired every day.

Question—(1) Which pigeon is considered the best performer, the Birmingham rollers or the tumbler? Please explain their actions. (2) Are S. C. White Orpingtons as easy to breed true

PRACTICAL REDS LAY-WEIGH-PAY

Our strain of Practical Reds have been bred for years with the object in view of securing a strain of birds in which the great commercial values, so well represented in a Red should be magnified to the greatest possible degree for

Every Chicken Reaches the Table Sooner or Later

We have succeeded and now offer you the result of our labors in our strain of Practical Reds. They have proven extraordinary layers, mature extra early, having large size from the start, carrying lots of breast meat with an exceptionally long body. In producing my strain of Practical Reds I have not lost sight of "show points" and my selected matings will produce birds close to the Standard requirements. :: :: ::

We send you eggs that hatch. Price only \$6.00 per 100, from our utility pens and \$10.00 per 100 from our selected matings. Place your order early. Write today.

RIDGE VIEW FARM
WILLOUGHBY, OHIO

to color as the White Plymouth Rocks or any other white chicken? G. G. B.

Caryville, Fla.

Answer—(1) Write to American Pigeon Keeper, Chicago, Ill., for information about pigeons. (2) Yes.

Question—Is Oklahoma a good poultry country? What part is best? Is Texas? What part is best? Is Arizona? What part is best? A. S.

Chicago, Ill.

Answer—Oklahoma and Texas are both excellent states for poultry. They can be raised successfully in all sections. Do not know much about Arizona.

Question—Last spring I purchased eggs for hatching from one of the large Barred Rock breeders in New York state, hatched and raised nine fine chicks, have two cockerel bred pullets and two pullet bred pullets, one fine pullet bred cockerel, also three fine cockerel bred cockerels. What I would like to know is would it be inbreeding to much to mate these cockerels with the pullets; or would you advise purchasing unrelated males? I am unable to sell these cockerels in this market for anything near their value. Thanking you in advance for your advice, I am,

F. B.

Woodstock, Ill.

Answer—You should purchase a suitable male bird from the same party as you secured your eggs from. This will avoid introducing foreign blood into your stock.

Question—Please tell me what was the matter with my little chicks. They were hatched the first part of this month. I fed them with boiled eggs for the first four days and then I fed them on chick feed. At the age of eight days some of them began to droop over with their eyes shut most of the time. I caught them and looked in their mouths. The mouth was full of sores and in each corner of their mouth was a sore. J. J. S.

Eufala, Ala.

Answer—Lice is probably the main cause of your trouble. If little chicks are kept free of lice their other ailments will be of minor importance. Grease the tops of their heads with a little lard to which has been added a few drops of kerosene oil.

Question—(1) How will I mix a good scratch food? I want to make 100 pounds and want to know in what proportion to mix same. (2) Also, how will I mix a soft feed to feed hot? (3) For all around laying purposes, what is the best breed? Thanking you in advance, I remain yours truly. L. F. J.

Greenville, N. J.

Answer—(1) Fifty pounds wheat, 25 pounds oats, 15 pounds cracked corn, 10 pounds millet or buckwheat. (2) Equal parts of bran and middlings, to which add 15 per cent alfalfa meal and 10 percent beef scraps. (3) The Leghorns.

Question—(1) How should I handle Mangle Wurtzel to keep until winter to feed chicks, also cabbage and turnips? (2) I have a cock bird that the skin is very red on shanks and around vent, the bird has a few vent lice and had access to a dung pile. I cleaned him of lice, but the body is still red, with white scales. (3) What should be the

temperature of the roosting at night, also scratching shed in the daytime in northern Wisconsin? (4) Do you advise washing Buff fowls before show, or steaming cloth and just rubbing off? Pine River, Wis. W. K.

Answer—These can be either put in pits or kept in a dry, cool cellar. (2) Use carbolated vaseline on the affected parts. (3) 50 degrees is about right. (4) Better results will be obtained by washing.

Question—(1) What is the best feed to give young ducks? (2) Will ducks lay as many eggs the second year? (3) How many ducks may be kept with one drake? (4) How many eggs will a Pekin duck lay in a year with good care? (5) What is the best feed to give ducks to make them lay? (6) What is the best hen to keep for eggs that has two acres range in an orchard and how many eggs will they lay? Ransomville, N. Y. A. R.

Answer—(1) Stale bread soaked in water. Wheat bran and middlings is also good. (2) Yes, as a general rule. (3) From four to six. (4) From 50 to 75. (5) A mash of wheat bran, vegetables, stale bread and beef scraps. (6) If for eggs exclusively, the Leghorn is no doubt the best. They will lay from 150 to 200 eggs per year.

Question—Please let me know through the American Poultry Journal what ails my Silver Wyandotte pullets. About two months ago three got lame and hopped around on one leg; they often lay down and stretch out the lame leg; the toes shrivel up and turn crooked like a person's hands in case of severe rheumatism. Two of them got well and one is as bad as ever. A few days ago another one got lame. They cannot use the leg the least bit; they have a good appetite. It appears to me like paralysis or rheumatism. My chicken house is 15x20 feet, with concrete floor and a board floor on top of the concrete. I keep wheat in self-feeder all the time. Please let me know what is wrong and remedy, if any. S. D. Y.

Grantsville, Md.

Answer—The trouble is rheumatism. This is usually caused by the fowls being exposed to damp weather. A tablespoonful of common baking soda to each quart of drinking water will usually effect a cure in a short time. See Dr. Salmon's book, "Diseases of Poultry." Price 50 cents. For sale by us.

Question—(1) What is the average egg production of the Indian Runner duck? (2) How much green bone per hen should be fed per week for eggs? (3) What is a good grain ration for laying hens? W. J. P.

La Valle, Wis.

Answer—(1) We are unable to say just what the average egg yield is; but some breeders claim from 150 to 200. (2) Two ounces per hen three times a week. (3) Wheat two parts, oats, two parts, corn one part.

Question—I have got a good pen of White Wyandottes and Rhode Island Reds that I raised this year. Please let me know in your next edition if I have got to get an old cock bird to put with my pullets to breed some good laying hens for next year—for either sex. D. H. S.

Gloversville, N. Y.

Answer—This is not absolutely neces-

sary, but better results will be obtained if a cock bird is mated with the pullets.

Question—(1) I have a chicken house 9x16 feet with 5 feet off for scratching shed. Shed all open to south except wire. Would it be best to curtain scratching shed? In other part of house I have a window on south side 3½ feet high, 6 feet long, 2 feet from ground and 3 feet from roof. Have glass windows for winter. Would curtain do better? (2) Would burlap do for curtains for chicken house? (3) How is best way to fasten curtains and should they be inside or out? (4) How many Buff Orpingtons could be kept in

cut bones are supplied. Feed wheat at noon, corn at night and make a mash of bran and middlings and vegetables for the morning feed. Feed just what the fowls will eat up clean in about five minutes. (6) Fowls intended for breeding purposes should not be forced for egg production. (7) Best quality whole wheat. (8) Yes. (9) Yes.

Question—What is the yearly egg yield of the Houdans? What is it of the white faced Black Spanish? What is it of the Rose Comb Black Minorcas? What is it of the Leghorns? (2) Do wood ashes make good dust baths?

J. R. P. I.

Chicago, Ill.

Answer—(1) We do not know of any record for the Houdan and the number of eggs laid by any variety depends to a great extent upon the breeder and the care and feed given them. (2) No.

Question—(1) Had the spurs on a seventeen months old B. Minorca rooster ought to be cut off? If so, how shall

I do it? (2) I have several B. Minorca cockerels that I want to breed from next spring, and as they annoy the hens, I have penned them by themselves. Will this injure them in any way for breeding purposes? W. S. Waterloo, N. Y.

Answer—(1) The spurs should not

feed them well on corn and oats and some ground green bone twice and three times a week. I notice that they eat their own and each other's droppings. What makes them do it and what will prevent it? (2) What is the best thing to sow in this climate on small lots to give green stuff the year

much green bone and not enough green food. (2) Unless you can get alfalfa to grow you had better try white clover.

Question—(1) Would a bunch of hens lay as well and lay as many eggs in a year without a rooster as with one? (2) For market eggs, do you recom-

purposes? (6) What special care do you take of hens and roosters which are used for breeding purposes during moulting season?

Salem, Ill.

Answer—(1) Yes. (2) No. (3) Yes. (4) Yes. (5) Eight months. (6) During the moulting period fowls should be comfortably housed and not allowed to be out during damp or rainy weather. They should be fed on the best quality of feed and given all they will eat.

Comb White Plymouth cockerel and a Single Comb White Leghorn pullet cross? (2) About what will be the weight of their offspring? (3) Will they be as good a layer as a full White Leghorn?

Watertown, N. Y.

Answer—(1) There would be nothing gained in making a cross of this kind. (2) We do not know. (3) No.

Question—(1) How many points are

NOTES OF CINCINNATI SHOW, 1909.

While not up to some former shows at Cincinnati in number of entries, if there ever was a quality show this was one, and as usual the American Poultry Journal family had the best of it. Rhode Island Reds were the largest class and there were birds shown here that were strong enough to win at New York or Chicago. Our old friend, C. H. Buschmann, of Indianapolis, made a record unusual for one breeder in such a strong class, winning in Rose Combs 1st, 2d and 4th cock, 1st, 4th and 5th cockerel, 1st, 2d, 4th pullet, 5th hen and 1st pen, besides many specials, including championship cup for best R. I. Red male in the show, all Reds competing, also special for best colored male in American class.

Mr. and Mrs. Buschmann spent several days at the show visiting with old friends and making many new.

Charles C. Coulter, Frankfort, Ohio, who has been breeding for the past three years, made a most excellent winning on some grand birds. His 2d cockerel is a remarkable good Red, strong in type and color. A few weeks would make him a contender in any company. We predict a fine record for this male as a breeder and show bird next season. Besides winning 2d cockerel, 2d, 3d and 4th hen and 5th pullet, Mr. Coulter had a pullet fully the equal of any female shown, having nearly ideal color and type, but she was not quite ready for show. At some later show she would not fail to win in strong company.

White Rocks were a strong class, next to R. I. Reds in number and fully their equal in quality. George A. Muenzenmaier, Lebanon, Ohio, was a big winner, landing three firsts on a cockerel, pullet and hen that it would be difficult to criticize for either type, size or color. The cockerel had the long back and low, well spread tail that White Rock breeders are after these days, and buyers of eggs from the pen which this chap will head can count themselves lucky. Look up the ad elsewhere in this issue.

H. L. Brown, Oxford, Ohio, who has been breeding White Rocks for ten years and a regular winner at Cincinnati, fully lived up to his past record. He won 1st, 2d, 4th cock, 2d, 3d, 4th cockerel, 2d, 3d, 5th hen, 4th, 5th pullet, 1st, 2d pen. His first cock took special for best color male in the show. Judge Pierce pronounced him the whitest male he had seen, saying he was a wonder in color as well as shape. The cockerel heading first pen was practically of equal quality. With two such males to head his best pens Mr. Brown cannot fail to give his egg trade some extraordinary value. He has some 100 cockerels and 150 pullets still to dispose of. Knowing both him and his stock as we do we can recommend him to our readers without any reservation.

In Buff Orpingtons and Black Orpingtons we doubt if any better birds will be shown this season than Mr. Milton W. Brown, of Cheviot Farms, had in his two pens of these varieties. He won first on each. A more extended mention of Cheviot Farms will be found elsewhere in this issue. Judge Loring Brown said: "I have never seen anything equal to the Cheviot Farms first Cincinnati pen of Buffs."

The best winner in open classes in S. C. B. Orpingtons was Edward Chambers, of Aurora, Ind., an old and successful breeder of this variety. He took ribbons on 1st, 3d, 4th cock, 1st, 3d, 4th hen, 2d cockerel and 2d pullet. His birds have been consistent winners at a number of shows, his first cock having a record of seven firsts. As a pen header he will be a valuable asset. His second cockerel is an especially typical Orpington.

Dillon & Bell are always good winners at Cincinnati and as usual got their share in all varieties shown by them. When a breeder of several varieties can win on all of them at Cincinnati he has something to back up his claims as a breeder. In Columbian Wyandottes they won 1st cock, 1st, 2d hen, 2d, 3d pullet, 1st and 2d hen and all specials. In White Wyandottes, 1st cockerel, 2d hen, 3d, 4th pullet, 2d pen. The cock in 2d pen was easily the best Dott in the show, and Cincinnati is noted for the quality of the White Wyandottes shown. This cock would attract attention anywhere.

In S. C. Buff Orpingtons they won 2d hen, 3d pullet, 2d pen. In S. C. R. I. Reds, 3d cock, 3d hen. In R. C. R. I. Reds, 1st hen, which took the special offered for best colored female in the show.

The show was a financial success, due to the conscientious efforts of its able staff of officers, and was one of the best conducted shows ever attended by this writer.

"We lead, others follow."

A Houdan pullet of splendid proportions. Bred and owned by Rev. C. E. Petersen, Bridgton, Me.

A little poultry tonic twice or three times a week will also be good for them.

Question—(1) Will hens lay as good not to be with roosters as they will to be with them? (2) Which has the high record, the White or the Brown Leghorns, of eggs this year? (3) What kind of lice powder do you use? (4) What kind of roup cure do you use?

Gastonia, N. C.

W. P. G.

Answer—(1) Yes. (2) The White. (3) See ads. in this issue. (4) See ads. in this issue.

Buff Orpington combs? (2) Standard weight of Orpingtons?

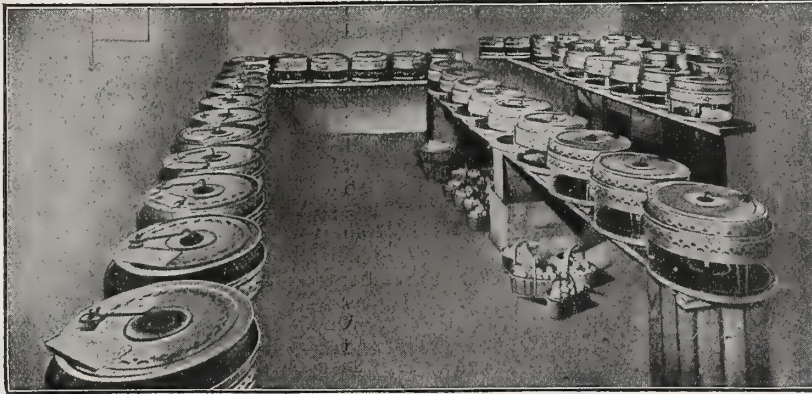

F. B. M.

Answer—(1) Five. (2) Cock, 10 pounds; hen, 8 pounds; cockerel, 8½ pounds; pullet, 7 pounds.

In a recent issue J. E. G., of San Antonio, Texas, asked where he could secure some Buttercups. We received so many inquiries asking for the full name and address of J. E. G. that it is impossible for us to answer all of them. However, we discovered that there are a goodly number of breeders of this variety in this country, but very few of them are advertisers. They should become advertisers and let our readers know what they have to offer.

Question—(1) How will a Single

A Little Poultry and a Living

Is the title of a little booklet we will mail free. It was written by the author of the PHILO SYSTEM BOOK, who makes every one of his hens pay him a profit of \$50 to \$100 each.

Metal Mothers

**Our New Discoveries
Make Poultry Keeping
Easy and Profits Sure**

Valley Falls, N. Y., Nov. 18, '09.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—I have used your incubators, both the Cycle Hatcher and Brooder Hatcher, during two seasons, and found them very satisfactory, as they were easily managed and gave excellent results every time. The Brooder Hatcher makes a convenient place for brooding the little chicks when first hatched, before putting them into the fireless brooders. Very truly yours,

(Rev.) E. B. Templer.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—No doubt you will be interested to learn of our success with the Cycle Hatchers. We have cleared over \$960 running our hatchery plant consisting of 56 Cycle Hatchers. We are pleased with the results, and expect to do better the coming year. With best wishes, we are, very truly yours,

(Mrs.) C. P. Goodrich,

Elmira, N. Y.

Our machines were used exclusively in the original Philo System plant, where over \$1,500 FROM 60 HENS IN TEN MONTHS has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our system of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen.

Our 1910 Pattern Metal Mothers

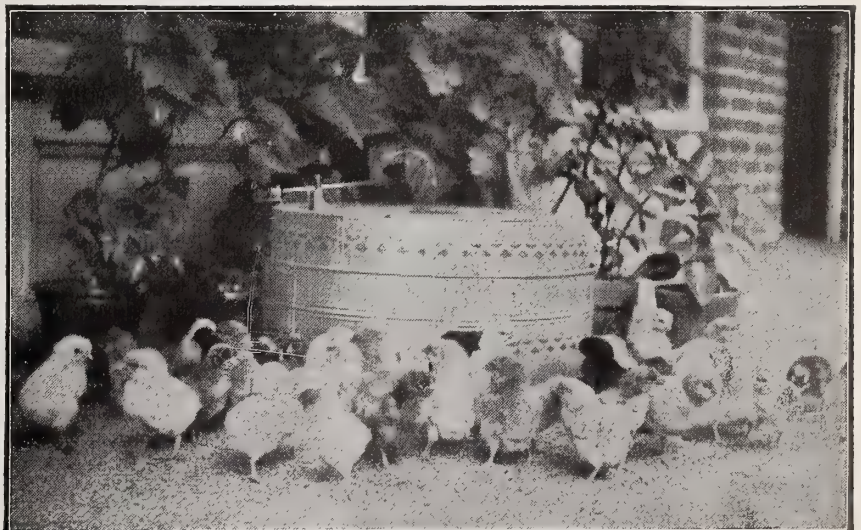

are the perfect results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic.

Large stock of machines at Oakland, Cal., our western shipping point. Write the Cycle Hatcher at the above address for Pacific coast prices.

One Metal Mother complete, \$7.50; two, \$14; four, \$24. One Cycle Hatcher complete, \$5; two, \$9; four, \$17; six, \$24.

The booklet "A LITTLE POULTRY AND A LIVING," fully illustrated and describing these machines, and a complete line of the most approved poultry appliances, mailed free.

Cycle Hatcher Co., 214 William St., Elmira, New York

SUBSCRIPTION DEPARTMENT

A WORD TO THE WISE IS SUFFICIENT.

We are now opening our great eleventh annual subscription offer and you will find full particulars of same on pages 8 and 9 of this issue.

The first prize on this offer is a \$600 Wing piano, manufactured by the old and well-known firm of Wing & Sons, 372-385 West Thirteenth street, New York City, N. Y., and if you want to know more about the excellent qualities of this piano write direct to Wing & Sons for a copy of their book, "A Standard Piano." This does not obligate you in any way, and you can see for yourself the piano we are offering. It is their Style 21 piano.

Fowls, incubators, brooders and cash are also being given, ranging in value from \$100 to \$15, and if you want some of these prizes it will be well for you to turn to page 8 and 9 of this issue, which gives you a better idea of the magnitude of this offer. If you want more particulars write to us and we will be pleased to furnish same.

We have hundreds of letters from agents who have won prizes in the past thanking us for the grand prizes they won. We have published several of these in every issue of the American Poultry Journal and will guarantee that each and every person entering this contest will receive equally as much attention and fair play.

Besides these prizes we are going to give each agent a present of one of our grand books, "Origin and History of All Breeds of Poultry." This book should be in every poultryman's library, and full particulars of contents will be found on page 37 of this issue. Remember, a copy of this book will be given absolutely free to each agent sending us six subscriptions. Monthly prizes are also a feature of this contest, and to the agent sending us the most subscriptions during the month of January a \$20 incubator or brooder will be given. To the second man a \$15 pen of fowls, to the third a \$10 incubator or brooder. The agent may select his fowls, incubators or brooders from any advertiser in American Poultry Journal.

Complete details of this special January offer will be found on page 9 of this issue. Further information, sample copies and other supplies can be had for the asking. Address American Poultry Journal Publishing Company, 358 Dearborn street, Chicago, Ill.

SATISFIED.

Scranton, Pa., July 9, 1909.

The American Poultry Journal, Chicago, Ill.

Gentlemen: I received the trio of fowls that I won as my premium on your tenth annual subscription contest. Many thanks to you and Mr. U. R. Fishel for the birds, for he certainly

sent me three nice birds. I am more than pleased with them. I remain,
Geo. J. Grimm,

Scranton, Pa.

A HUMMER.

You can get American Poultry Journal, Commercial Poultry Journal, American Poultry Advocate and Poultry Item—a \$2 value—all four for \$1. Better take advantage of this combination and send your subscription to American Poultry Journal, Chicago, Ill. Complete details on another page of this issue.

L. W. RANKER.

Breeder of Single and Rose Comb Buff Leghorns and winner of eighth prize on our tenth annual subscription offer.

This offer is good for renewals as well as new subscriptions.

A REMINDER.

Farm Poultry, Western Poultry Journal and American Poultry Journal can again be obtained for one-half price or 75 cents. If your subscription is about to expire you better renew now, as we do not know how long this offer will last—\$1.50 value for 75 cents. Send your subscription to American Poultry Journal Publishing Company, Chicago, Ill.

Germantown, O., June 28, 1909.

Dear Sirs: I desire to acknowledge the receipt of the premium sent me and express my thanks for same, and feel more than repaid for the little effort put forth in securing the subscriptions.

Wishing American Poultry Journal every success, I remain, Yours truly,
Henry Oehler.

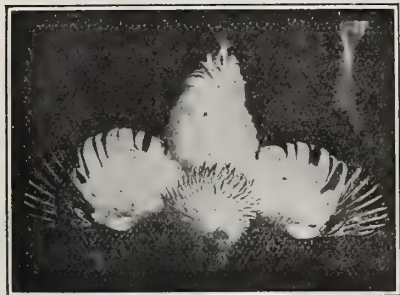

THE BLACK ORPINGTON BEAUTIFUL.

"Those are the most beautiful chickens I ever saw," said a friend as he looked for the first time upon a flock of Black Orpingtons, of which we were the fortunate possessors. And the conviction came to us again, as it had many times before, that they were truly, of all fowls, the most attractive, quite apart from any personal fancy or preference we might have. And this, we may say, is our abiding conviction, for we have never yet heard any observer of this variety, either in our home yards or at the shows, express anything but admiration at the sight of a big, sturdy Black Orpington male, however some may be disposed to demur at the statement that any black variety may really be considered beautiful. And yet had we never seen anything in color upon a Black Orpington save the black—the dull, dead black—we confess we never could have become so infatuated with them. But as a matter of fact we didn't see the black so much as we did the soft, lustrous green, which is so untiringly fascinating to the eye, a color which one never experiences the sense of weariness in beholding. And reader, you may talk about the red, the white, and perhaps the blue, and you may add to these the variations of stripes and dots, and also the bars, but tell me, what color of them all is so pleasing and absorbing to the eye as the green? Why is it that every traveler who visits the "Emerald Isle" expresses so enthusiastically his impression of what he sees, as dressed in nature's own beauty? And why is it that we admire, almost to reverence, the green sward on yonder hillside, where "God so clothes the grass?" It is due, in a word, to color impression. And this color is the green, which ever leaves in the mind such a pleasing and lasting impression. And the general surface color of a well bred Black Orpington is the same. We have, therefore, no hesitation in saying that so far as color is concerned the Black Orpington is the most beautiful fowl of the day. And yet it may be said that in this particular they are in the same class with other black varieties, notably the Black Langshan. But while the Langshan is admitted by all to be a beautiful and useful fowl, in shape they are not in the same class with the Black Orpington. And besides shape it should be remembered that the Black Orpington is the largest, clean-legged variety we have, which is arrayed in plumage of green. For we judge that the presence of feathers on the legs of any variety is objectionable and unsightly, if not uncleanly. At least few would admire such a feathery effusion, but would be more inclined to look upon such a condition as a necessary but offensive evil.

But it is in the shape of the Black Orpington that we have, perhaps, the

strongest reason for declaring them the most beautiful. Though it may be a question whether color or shape, in general, forms the chief feature of beauty. It is the combination of both these, in fact, that must be considered, if beauty, as such, is to be determined. And there is no shape among thoroughbred fowls like that of the Black Orpington. It is a shape that may be termed princely, and one that bespeaks great strength of constitution. Broad, full and deep, describe its outline, which is singularly suggestive of beauty and great utility.

If, then, this fowl combines in so unusual a degree the two chief elements belonging to beauty as found in color and shape, what is there left to prove that they are the most beautiful fowl extant? For it may be seen by the most casual reader that they are easily proven, as a variety, to be unique in such a combination. For while there are other varieties of the same family that have the same description of form, or shape, given them, these are the most beautiful in color, and have attained thus far that shape most perfectly. And, again, while there are other breeds of the same color, as the Black Langshan already referred to, still in the Black Orpington we have the most desired and also the most desirable shape. It may, therefore, be readily concluded that the Black Orpington has

A study in good wings and hackle; 8-months-old Columbian cockerel bred and owned by C. L. Patterson, Barberton, O.

an advantage over both the Langshan and its sister varieties among the Orpingtons.

In dilating upon the beauty of the Black Orpington we can hardly conclude our article without referring to their great utility value, though this phase of the subject is a little foreign to what we have in hand. Yet it has become no secret that this excellent variety is celebrated for its unsurpassed laying and market qualities. And no fowl, we would say, has given less disappointment to those who have taken them up, from the utility standpoint, than have the Black Orpingtons. And I would invite any who may have had any experience with them in a disappointing way to look closely to the cause, and see if it was not something for which the variety, as such, was not responsible.

Different strains of any breed of fowls may be developed and established, but no variety was ever created and launched forth, we are persuaded, with a more favorable beginning and brighter outlook than were the Black Orpingtons. A noble, prepossessing fowl that a few years ago captivated England, and still continues to gain in favor and popularity, not only in that country, but increases in favor throughout the whole world.

Dr. Geo. B. Edwards.

Laceyville, Pa.

S. C. WHITE LEGHORNS

The quality kind, bred exclusively for ten years. Unparalleled wins in some of the best competition. Don't fail to write for circular. Both stock and eggs for sale.

ASSOCIATIONS AND SHOWS

Secretaries are requested to send in news items of interest about their show for this department.

THE WASHINGTON (D. C.) SHOW.

Today the Columbia Poultry & Pigeon Association closed the most successful show that has ever been held in Washington. The writer has predicted more than once in these columns that Washington was destined to have a great poultry show in the near future—one that would stand in the class with Madison Square Garden, Boston and others. His expectations are being realized more rapidly than was even dreamed of. It can readily be seen that when merchants, real estate dealers and others of high business qualifications join hands for the express purpose of accomplishing anything that progress is inevitable. The promoters are highly pleased over their success. The show is growing by bounds and leaps notwithstanding the adverse ordinances passed by the commissioners to raising chickens in the District of Columbia. This is unfortunate not only for the show association but for those living in the District of Columbia who like to raise chickens for home consumption as well as fancy stock. Let us hope that such adverse ruling will soon be revoked and thereby aid one of the greatest and most essential industries of the day. Nothing is doing more to promote this magnanimous industry than the multitude of poultry shows that are being held all over the country. The one just closed in Washington brought together the finest lot of birds ever assembled in the nation's capital, as is clearly shown by the many complimentary remarks made by visitors from New York to Oregon and from Michigan to Porto Rico, and from other countries as Austria, Belgium and others. Ambassador Henglemuller, baroness and daughter of Austria were very enthusiastic over the show, saying it was the nicest lot of poultry they had ever seen. Ex-Representative and Mrs. R. E. Doan, of Ohio, were among the distinguished visitors. Representative Doan spoke in the highest terms of the great success that is being made in the poultry business, and especially of the high quality of the Washington exhibit. Representative Clayton, of Alabama, said he had attended many poultry exhibitions in different parts of the country, and the Washington show was the nicest he had attended; that the quality was superior to any he had seen. Ex-Senators A. C. Parkinson and L. L. Smith were much delighted with the exhibition, saying it was of the best quality and finest display of poultry they had ever seen.

Baron Ambrosy, of the Austrian legation, was one of the most delighted visitors, and had nothing but words of praise for the high quality of the show. Hon. Ashley M. Gould, judge of the supreme court of the District of Columbia, was well pleased with his visit and spoke very highly of the exhibition. W. M. Sickels, superintendent of the Indian school and reservation at Luc Du Flambeau, Wis., says he has visited many poultry shows, some larger than the Washington show, but never in his life had he seen better quality than he saw here.

Many visitors who had been raised in the country and now have their country homes with poultry on their places were really astonished at the beauty of many of the birds exhibited.

The attendance was good throughout the week, and the management succeeded in getting many more men of wealth and influence interested than had ever been done before.

Hon. James Wilson, Secretary of Agriculture, who holds the reputation of being longer in the President's cabinet than any other man who has held a cabinet position, formally opened the show with an address which contained many valuable and instructive remarks. Hon. B. H. Warner responded.

P. B. Chase, owner of Chase's Theater and of the building in which the show was held, became so enthusiastic that he says he is going to stock up his Ohio farm. He bought one pair of Bronze turkeys at the show for \$75 and is going to send them to his farm. There were many other sales of poultry made, which helped to make the show profitable for the exhibitors and thereby added to its good name for the future.

The show was held in a large room which had been appropriately and elaborately decorated free of charge with evergreens, flags and bunting by Gude, one of Washington's leading florists. Many nice and valuable cups were donated by hotels and individuals as special premiums.

The show was a grand success in more ways than one. In its closing hours the officers, exhibitors and visitors all seemed to be in the best of spirits, and all seemed to have been benefited by its presence.

Mr. Washington Waters, president of the association, tells me that it is the ambition of the association to make the Washington show a nation show, such as the Crystal Palace show of England. Washington is the ideal place for such a show, because of its being the national capital and also its geographical location. This idea deserves the consideration of all the poultry associations in the United States. The exhibiting of poultry in this country has grown to such a stage that there should be one show as a climax of all the shows in the country, and thereby add to the ambitions of the winners all over the continent.

Thomas D. Gannaway.

GREAT INTERNATIONAL SHOW.

The idea of holding in Buffalo a great international show of poultry, pigeons and pet stock on January 24-29, 1910, has met with such favor among the clubs and fanciers on both sides of the line that the management had to look around for a larger place than Convention Hall for holding the show.

The large Broadway Arsenal has been secured, which will hold 4,000 birds without tiering, and has in conjunction with it a convention hall and many small halls for club meets and special exhibits.

Pin Your Faith to the
16-Year Success

The Best
In the World

Our machines are doing wonders at hatching in every state of the Union; wonderful results reported from the cold and low lands in Canada; the hot climate and high altitude in Mexico. From the dry country in Colorado and the damp atmosphere in the New England States, and hot South America; from 6,000 feet above the sea level in India; the mild climate in Australia; far eastern Japan and every country in Europe. We outatched them all—home, as well as all leading foreign makes.

S. A. Hummel, Box 52, Freeport, Illinois

The aldermen voted the use of this hall for the exposition. The great interest taken in the International Show, aided by the Chamber of Commerce and the Manufacturers' Club and the Retail Merchants' Association, bespeaks a great local attendance.

The program for the entertainment of visitors is about completed, and everybody is guaranteed a good time. The railroads will run day excursions at exceptionally low rates from points not too distant, and the reduced rates hold good for the whole show week.

The list of Specialty Club meets is still growing, having added, since last announcement, the Ancona Club, Rhode Island Red Club, Buff Wyandotte, Cornish, Barred Rocks, American Tumbler, Western Tumbler and the Pouter Clubs. Several clubs have not yet voted on their next place of meeting, but can be relied on for selecting Buffalo, because of the liberal inducements put up by the International Poultry Department of the New York State College of Agriculture, at Ithaca, N. Y., which, working in conjunction with Prof. Graham, of Guelph College, Ontario, are putting on a specially instructive exhibit at this show.

Prizes will be awarded in contests among the students of several colleges on judging poultry and plucking and dressing fowls. Several speakers have been engaged for each day and listed on

Two Ways to Help the Hen!

Digestible protein is all that counts for results in poultry feeding. That's what makes eggs—furnishes strength and vigor to the fowl. A food may be rich in protein and still of no real value to the poultryman unless that protein is digestible. The following letter will show how the big poultrymen have solved this problem, and should prove the real value of

LEE'S EGG MAKER

in feeding for eggs. Mr. Hammons is manager of one of the largest (if not the largest) poultry farms in the world; his experiments have extended through a period of years and here is his letter, in his own words, under date of Oct. 25th, 1909.

Geo. H. Lee Co.

Gentlemen:—I just noticed in one of your books copy of my letter to you of two years ago showing phenomenal results I received from feeding Egg Maker during December, 1907. (Average per hen 16.3 eggs, at a feeding cost of 6 1/2 c per dozen). But this year my yearlings beat all previous records in the history of our business, having averaged 41 per cent egg-production during the moulting season. They are just finishing the moult and in fine condition. Last year during the moult the flock averaged 38 per cent; the year before 33 per cent. I attribute my success entirely to my method of feeding—proper proportion of good digestible protein which I have found only in Lee's Egg Maker.

(Signed) PACIFIC POULTRY CO.,
Los Angeles, California.
D. H. HAMMONS, Supt.

Digestible protein is what the scientific poultry feeder searches for; it's what you want for your fowls. That which is a profitable food for poultrymen with 10,000 layers will be of proportionate value to you. Lee's Egg Maker is not a medicine in any sense of the word, but a scientific food product based on Mr. Lee's observations during his more than twenty-five years of actual work with poultry. It is not a theory but a reality. Contains not a particle of cheap and worthless filler and is of equal value for laying hens, all penned-up poultry, or as a growing food for little chicks.

We guarantee it can be fed to the exclusion of all other forms of meat food at less feeding cost and with better results from every standpoint.

Price: 25-lb. pail, \$2.00; 100-lb. drum, \$7.00; freight paid in 100-lb. lots. Handled generally by merchants, but if your dealer doesn't have it, send your order direct to us.

GERMO- ZONE

is the

BEST PREVENTIVE

and CURE for ROUP

Cholera, Chickenpox, Bowel Complaint and other diseases of a similar nature. It is not a cure-all for every disease of poultry, but its general use throughout the entire poultry world proves conclusively that it is the best poultry medicine obtainable. Germozone has special value in that while it cures and prevents disease at the same time there are absolutely no injurious after effects from its use. It is a germicide; a system builder; a tonic. It works from the bottom up—goes to the seat of the trouble and effects a permanent cure.

It should be given in the drinking water twice a week to prevent contagion and disease and keep the fowls in a healthy, vigorous condition. You can buy it either in liquid or tablet form (both equally good) at 50c per bottle or package. Some poultrymen say Germozone is worth its weight in gold. Certainly it will be the best investment you ever made, if you expect to succeed with poultry.

Write for free copy of our latest book, "Lee's Chicken Talk," written by Geo. H. Lee himself. Also for catalog of Mandy Lee Incubators and Brooders. You need them and we want to send them to you.

LADY GRACE.

An ideal Bateman Langshan. Bred and owned by J. T. Bateman, Waverly, Ill.

the program for talks on subjects of interest to all fanciers.

The judges selected to date are Butterfield, McNeil, Drevensteadt, Schwab, Minchell, Burgott, Denny, Webb, Jarvis, Harp, Wagner, McKenzie, Ewald, Young, Gorse and Boulthée.

The exhibit of pigeons will be one of the largest ever seen at one show, as has been already guaranteed by the several clubs.

The canary room will be the parlor of the show, filled with hundreds of valuable specimens of feathered pets. The Canadians are coming over strong, expecting to carry back a number of the cups, medals and cash specials.

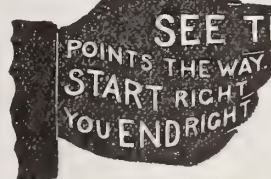

Premium lists mailed December 10. Send a card with address and be put on our mailing list.

Address International Show, 309-11 Brisbane building, Buffalo, N. Y.

RUTHERFORD, N. J.

The Rutherford, N. J., Poultry, Pigeon and Pet Stock Association will hold their tenth annual show January 13-15. The association has added to their usual large number of cups and cash specials and have a large list of other specials, covering every Standard variety of poultry. This organization is backed by a strong bank account and every prize offered is guaranteed. Rutherford is in the center of a great suburban neighborhood of the better class, contiguous to New York City, and this show offers an opportunity

YOU WILL GAIN 30 PER CENT IF YOU USE EGGS TESTING "XX"

Cost saved before hatch begins

THE MAGIC EGG TESTER will show the best eggs for hatching BEFORE you put them into the incubator.

Prof. Wallace Mead, the great London authority says: "The sensation of 1908, and the poultrymen's guide henceforth."

Weak eggs cost the poultrymen thousands of dollars daily. Don't wait, order now and use while bringing the eggs up to full strength. Your hens are just right when their eggs test "xx," and not before. "Strongest germs are in the eggs testing 'xx.'"—SEILER

Testimonials from well-known poultrymen testing 800,000 Eggs

A purchaser may use the Tester until the first hatch is off, after which a further trial of sixty days will be allowed. Purchase price then returned if not satisfied. Nothing to lose, everything to gain. Fully guaranteed to be just as represented. 12,000 in use. By mail, complete, on receipt of \$2.00. MAGIC EGG TESTER WORKS, Buffalo, N. Y.

for the sale of stock at good prices. Rutherford has excellent express facilities and all fowls coming in will immediately be sent to the hall, avoiding any delay whatever. The show will be held under A. P. A. rules and the judges, Messrs. Davey, Stanton and Yelton, are of national reputation. The superintendent has had wide experience in handling birds in showroom; they will have the best of care and are shown in Empire coops. Premium list will be ready to mail December 6; entries close January 1. R. H. Wilcox, Sec'y, Hasbrouck Heights, N. J.

THE GREAT ATLANTA SHOW.

The second annual exhibition of the Georgia Poultry Association will be held in the city of Atlanta, Ga., January 18-23, 1910. The show will take place in the Auditorium-Armory, one of the finest show rooms in the country. This show is the great annual poultry event of the Southern states, and is patronized by the breeders not only from the South, but from almost every section of the country. A winning at the great Atlanta show carries with it great prestige, and for that reason alone it will pay you to show at the Atlanta show. Situated in the very center of one of the finest poultry sections of the country, where thousands of people are becoming interested and going into the poultry business, an exhibit at the Atlanta show will do you more good than at almost any other show in the country. The attendances at the Atlanta show are enormous, and thousands of dollars change hands each year at this show for stock and eggs. The show this year will have many new and attractive features, and will be the best poultry exhibition ever held in the South. The cooping will be under the direction of the Spratts Patent Company. Besides the regular cash premium list, there will be posted a big list of cash specials and many handsome silver cups and trophies. A big bench show will be held in connection with the poultry show, under the rules of the A. K. C. The best judges in America have been engaged to judge the show. Don't fail to show at Atlanta. For premium list and entry blanks address C. O. Harwell, 113 N. Fryor street, Atlanta, Ga.

KANSAS CITY, MO.

Unlike the circus showman, we don't say, "Wait for the Big Show," but show wherever you can, but remember the "Big Show" is at Kansas City January 11 to 15—the right time to show birds. At this time they are in full finished plumage, complete in every way and in every way ready.

This is a winners' show; coming well after the fall fairs and other early shows, it presents an opportunity for a final comparison of a lot of blue ribbon winners. A winning here is a winning to swear by and advertise. The same liberal prizes and the ever present square deal awaits every exhibition as usual, and the crowded show rooms mean the usual heavy sales at good prices.

The "Old Guard" knows this for the quality show of all the West. Those who have not been here before, should get into good company.

You know that Kansas City is a "live wire," the center of the universe—at least the poultry universe—and, like Rome of old, all roads lead to it; so all express companies are at your disposal.

So come to Kansas City and bring your best. Let Hewes and Pierce and Kummer and Branch look them over and stamp them as the real thing.

At the great Convention Hall, as usual, January 11 to 15. Ask the secretary, P. H. DeFree, 932 Jackson avenue, for premium list, and do it now.

ANDERSON, IND.

The second annual show of the Hoosier Fanciers Association will be held at Anderson, Ind., February 15 to 19, 1910. Judges, George Ewald and D. T. Heimlich. Their first show last year brought exhibitors from five states, seven hundred entries, and everyone pleased.

This association has its own hall and owns its own coops, and are on a sound financial basis, and all premium money is personally guaranteed by each and every officer. They will have about twenty silver cups, all beauties.

Premium list now ready. Address N. M. McCullough, Sec'y, Anderson, Ind.

"We lead, others follow."

Healthy Chickens Bigger Profits

will result if your coops and nests are kept free from lice, mites and other poultry pests by the use of

Vitazone

Vitazone positively destroys lice and mites, no matter how badly the coops are infested. Destroys odors, prevents disease, cures roup and colds.

Vitazone lasts a long time—is inexpensive and comes in various convenient forms and sizes.

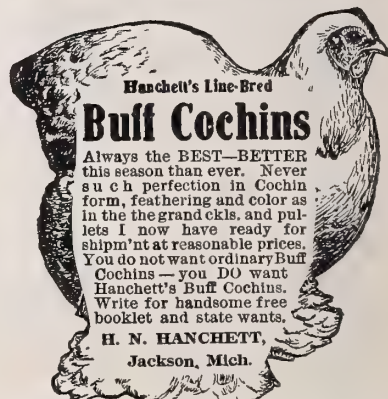

Ask your dealer, or send 25c in coin or stamps and dealers' names, for two large sample cakes and valuable booklet on poultry house sanitation.

SPECIALTY CLUBS

This department is for the use of all Poultry Clubs and the Secretaries are requested to make liberal use of same.

NATIONAL BLACK ORPINGTON CLUB.

The annual meeting of the club took place at the Chicago show December 8 at 3 p. m.

The secretary-treasurer's report showed an increase of over 100 per cent in membership during the year and for the first time in the club's history a substantial balance in the treasury.

The place for the next annual meeting was discussed and St. Louis favored, provided the membership of the club were favorable and the show inducements there as favorable as this year.

Numerous awards were set aside for the shows next year in the way of cups, medals and club specials.

A goodly sum was also set aside for the purpose of advertising the breed.

A club emblem was decided on and will be for sale to members only.

A committee was appointed to confer with the revision committee to recommend on behalf of the club that the Standard type for the Black Orpingtons shall be a modification of the present Standard in the following respects:

Legs very slightly shortened.
Neck slightly shortened, hackle slightly more profuse.

Tail slightly shortened and lowered very slightly.

Breast slightly fuller.
An increase in the weight.

Body slightly broader.

Color—Eyes black or dark brown; shanks and tees black or bluish black.

The club was glad to welcome to membership some well known breeders of

other varieties, who will henceforth breed the Black Orpingtons. The list includes former Red, Houdan, Rock, Leghorn, Langshan and Wyandotte breeders of reputation. The club takes pride in its new members, who are enthusiastic over their new breed.

The new catalog will go to press at once and will contain the name and address of all members in good standing, and whose business integrity it guarantees.

Milton Brown,
Secretary, Cheviot Poultry Farm, Cincinnati, Ohio.

NATIONAL PARTRIDGE WYANDOTTE CLUB.

A few facts you should know concerning the National Partridge Wyandotte Club are:

That this organization is not quite a year old, and proudly boasts of having over a hundred members, and every one a booster, working hand in hand in the interests of the club, and the grand variety in general. Every honorable breeder should become a member of this progressive club and share the many benefits to be derived from a worthy organization of this kind.

This club is a life member of the American Poultry Association, a guaranteed assurance that the business affairs of this club will be managed in accordance to its rules and regulations; equal rights for all, special favors to none.

A set of five handsome special badges, one each, for best cock, hen, cockerel, pullet and pen, will be offered at the various shows of every state and the

provinces of Canada. At one of the largest and most prominent shows of every state, where our membership is ten or more, we will offer in addition to the set of badges a beautiful silver cup. All club specials are for the competition of birds owned by members only. Now is the time to get into the band wagon; join this real live club and become one of the boosters for better Partridge Wyandottes, and more of them. The cost of joining is only \$2 for membership and dues for the ensuing year. Send the amount to Mr. Wm. Erfurth, secretary-treasurer, South Chicago, Ill.

DAY OLD CHICK CONVENTION.

The first annual meeting of the American Hatchery Association was held at Toledo, Ohio, September 21-22, 1909, and resulted in the election of the following officers:

C. A. Thompson, Bellevue, O., president; Charles Iden, Cromwell, Ind., vice president; W. H. Schadt, Goshen, Ind., secretary and treasurer.

Some of the benefits to be derived from membership in this association are as follows: To upbuild and encourage Day-Old Chick industry; to secure better representation and advance the interest of this popular method of selling thoroughbred stock; to secure better express services.

The membership fee is only \$1, and we invite anyone interested in this work to correspond with the secretary, W. H. Schadt, Goshen, Ind.

AMERICAN POLISH CLUB.

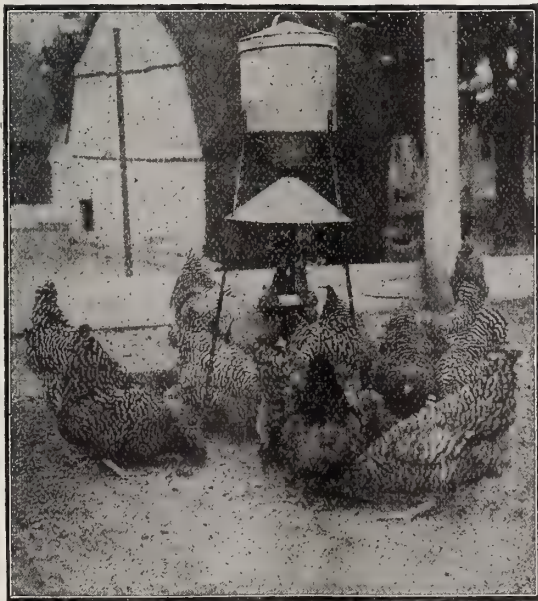

The American Polish Club respectfully requests that you publish the following announcement in your next issue:

The annual meeting of the American Polish Club will be held during the week of the Boston show at Boston, Mass., January 12, 1910, at 10 a. m. Officers for the ensuing year will be elected, and other important business will be transacted.

Many valuable specials are offered at the Boston show, and a large exhibit of Polish will be made.

This club is in a flourishing condition.

BARRED PLYMOUTH ROCKS

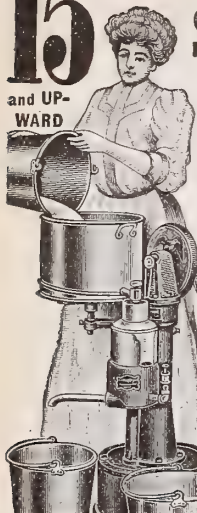

WE CANNOT TELL YOU in this space all that we want to say about the merits of our Barred Plymouth Rock winners at Toledo, Detroit and other large shows and also our high-class utility stock. We have, however, published a new handsome catalogue telling about our stock and containing many fine illustrations of our yards and buildings, and also individual pictures of our birds. These pictures are untouched and shows the birds true to life. If you are intending to purchase either stock or eggs, send us one dime today for this elegant catalogue. We guarantee that it will interest and please you. Also send at once for free circular telling all about the Poultry Feeder and Exerciser shown in this picture. We are the exclusive agents for this Feeder and Exerciser in Ohio, Indiana and Michigan. It is the greatest feed and labor-saving device ever placed in a poultry yard. We have fifty of these Feeders and Exercisers in constant use in our yards. The price of the Feeder and Exerciser is 8-quart, \$2.50; 14-quart, \$3.25; 20-quart, \$4.10; 32-quart, \$5.00. Send us the price of the size you want and we will ship it to you on thirty days' trial. If you do not want to keep it, return to us and we will refund your money and pay the express charges both ways. We refer to the editor of this paper and to the Citizens Banking Company, Perrysburg, Ohio, as to our financial standing. Write today. Remember, the Barred Plymouth Rock catalogue is only ten

Cents in silver or stamps and the circular telling about the Poultry Feeder and Exerciser is free.

NATIONAL BLACK LANGSHAN CLUB.

The annual meeting of the National Black Langshan Club was held in Chicago, December 9, 1909. There was a good representative attendance and all the business of the club properly cared for. A detailed report will be sent to all members. The following officers were elected for the ensuing year:

President, R. A. Hewes, Crete, Ill.; vice president, Jesse T. Bateman, Waverly, Ill.; secretary-treasurer, M. S. Barker, Thorntown, Ind.; executive board, Napoleon J. Barnes, Winchester, Ky.; Wm. Snath, Scranton, Pa.; Mrs. Margaret Daly, Anamosa, Ia.; Mrs. Melvin Gregg, Stanbury, Mo.; Nelson Rice, New Market, Ind.

WITH ONLY A SINGLE COW

A cream separator will pay and pay better than any other farm implement. True, the above statement depends upon the amount paid for the machine, but this problem has been successfully solved by the American Separator Company, who have produced a cream separator that is truly a wonder, both in the work it does and the price at which it is sold. Only \$15.95 for a complete separator, made of the very best material and of the latest design. It skims over a quart of milk a minute, and does it perfectly. The company offers to send the machine absolutely on trial, affording the opportunity to test and compare it with any other separator made, no matter if it costs five times as much. It is a model of workmanship and fully supports the motto of the company, viz., "Not how cheaply can it be built, but how well can it be built and how cheaply sold."

For a small dairy, hotel, restaurant, or even private family, it is just what has been needed. When a machine like this can be obtained for so low a price then certainly no one making butter, no matter how little, will do so without a separator. There is nothing laborious in operating it, any woman or fairly grown child can run it sitting down; while it is a most simple machine to care for. Being made and sold by the oldest exclusive manufacturers of hand cream separators in the United States is, in itself, a guarantee of quality, and anyone interested at all in cows owes it to himself to write to the American Separator Company, Box 158, Bainbridge, N. Y., and ask for their \$15.95 proposition. They will send it free, postpaid, together with their handsomely illustrated catalog describing their full line of separators of all capacities and also explaining their system of selling direct to the user, saving all agents' and middlemen's profits. The value offered will surprise you and you will realize how this company has studied and worked to produce a machine especially suitable in capacity and price for the small dairyman whose use of a separator heretofore has been largely prohibited by the high prices asked for large capacity machines.

CLARENCE J. ROOT, SPRINGFIELD, ILL., BREEDER OF SINGLE COMB WHITE LEGHORNS —PURE WYCKOFF STRAIN.

At Illinois State Fair, October, 1909, won 1st pullet, 4th pullet, 3d cockerel. No old birds shown. Missouri State Show, St. Louis, December, 1909, entered three birds, a cockerel and two pullets. Won 4th pullet in a class of fifty-one pullets. Also 3d on Leghorn eggs, all varieties of Leghorns competing together. As this is my first year and my stock is small, I feel highly gratified. I will sell settings of eggs later from a pen made up from these birds.

G. W. Garlock, Fort Atkinson, Wis., breeder of Standard bred Barred Plymouth Rocks, is a new advertiser with us this month. While Mr. Garlock is a new member of our family, he is not a new breeder, as he has been breeding Barred Plymouth Rocks for a number of years, and we take pleasure in introducing him to our readers and ask that they write him for prices and particulars, as he guarantees to satisfy. Mention American Poultry Journal.

Shoemaker's Poultry Book

AND ALMANAC FOR 1910

There is nothing in the world like it. It contains over 200 large pages, with many fine illustrations. A number of BEAUTIFUL COLORED PLATES OF FOWLS, showing them in their natural color.

Tells all about all kinds of thoroughbred chickens, with life-like illustrations. Prices of eggs for hatching and fowls for breeding purposes. TELLS HOW TO RAISE POULTRY SUCCESSFULLY, their care and management and how to treat all diseases common among them. Gives illustrations and descriptions of convenient poultry houses and plans to build them.

The Globe

ALL ABOUT INCUBATORS and BROODERS with the illustrations, complete description, and lowest prices. ALL ABOUT OPERATING THE INCUBATOR. This chapter is marvelously complete, and worth much more than the price we ask for the whole book. This Poultry Book is worth dollars to anyone interested in the raising of fowls. It is AN ENCYCLOPEDIA OF CHICKENOM, and no one can well afford to be without it. Will be mailed to anyone upon receipt of only 15c. Money refunded if not pleased.

HOW TO REDUCE LIVING EXPENSES.

Hundreds of New Ways to Prepare Food Economically.

Statistics prove that the cost of living has steadily increased and will continue to increase. At the same time the wage scale has not grown proportionately large enough to offset this. There is but one thing to do when confronted by a situation like this, and that is to reduce the cost of living. Economy must be practiced to make ends meet. Many of the little luxuries that have been enjoyed of course can be stopped with slight inconvenience.

The real pinch comes when an attempt is made to tamper with the table. The proper amount of food must be eaten. This is the largest household expense and the one turned to naturally when the question of economy is raised.

Now the easiest way to make a saving is to use the remains of the roast beef, the chicken or turkey, the shoulder of mutton, or many other things that heretofore were thrown away. It is just here that the woman who has an "Enterprise" meat and food chopper in her kitchen is able to run her household economically. It makes possible hundreds of new ways to prepare food. Economizing by skipping the table is not necessary, as the chopper reduces waste to a minimum.

The "Enterprise" meat and food chopper cuts—not crushes—meat, fish, vegetables, fruit or any food that will go through it. Many dishes that housewives have seldom made because of the trouble attached are easily prepared. New ones that they have hesitated to try are now within their reach. A turn or two of the handle and the article is cut, and the advantage over the old time consuming methods clearly shows it to be a household necessity.

"The Enterprising Housekeeper" is a valuable little book containing over 200 recipes, of which every housekeeper should have a copy. The publishers will be glad to mail a copy to any address upon receipt of 4 cents to pay postage. Address the Enterprise Manufacturing Company of Pennsylvania, Dept. 33, Philadelphia.

SIMPSON'S BARRED ROCKS.

For the past twenty-five years Edgar G. Simpson, Naperville, Ill., has been breeding Barred Plymouth Rocks, and has perfected a system that is second to none in this country, which has been demonstrated by his winning at Chicago for the past five years. At Chicago, January, 1908, he won first cockerel and champion male, special for best cock, cockerel, hen, pullet, pen; at Chicago, 1908, first cock, first hen and five other regular prizes and \$100 special for best display; At Indianapolis, Ind., February, 1909, won first cock, first hen, third pullet and first cockerel against the best that could be brought together; at Chicago, December, 1909, first and second cock, first and third hen, fifth cockerel, third pen, special for four best cocks, special for four best hens, special for four best pullets, special for best shaped female, \$25 silver cup for best two cocks, two hens, two cockerels, two pullets and pen. His matings this season will be the best possible, and if you desire to improve your stock write him and mention American Poultry Journal.

THE WORLD'S FAMOUS INCUBATOR, W. M. LININGER, INVENTOR AND MANUFACTURER, HINTON, OKLA.

Is a new incubator presented to your attention for the first time in this issue. Mr. Lininger claims to have discovered the reason so many chicks die in the shell on the eighteenth day and to have eliminated this trouble in his machine. He also has many other points of superiority which are mentioned in his ad and literature. You will want to know about this new machine, and we suggest you send to him for further information. Address W. M. Lininger, Hinton, Okla.

Charles C. Wine, proprietor of the Valley Farm, Mount Sidney, Va., exhibited two of his Barred Rock males at the late Washington, D. C., show and won first cockerel and fourth cock, and this in a strong class. Better write him for prices on Barred Rocks and S. C. Brown Leghorns. He guarantees satisfaction and has the stock to back it up.

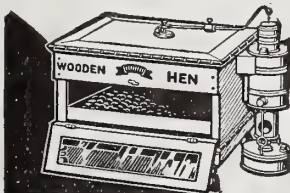

Breasted Banded
F. R. Green
Lake City Iowa.

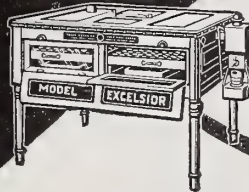

: : "RINGLET" : : Barred Ply. Rocks

Have won more prizes at the leading shows of America than all others, which stamps their superior quality. I now have the finest and largest lot of exhibition and breeding birds I ever owned; they have the sharp contrasting colors, showing the Ringy barring, that win under all judges. Write me just what you want and I will make you a low price considering the stock you get.

F. R. Green : Lake City, Iowa

Hatch Chickens By Steam

Stahl Incubators were among the first to be put on the market; to-day they stand as they did then—the best—approved by thousands of particular fanciers the world over.

This isn't luck—it's merit—perfect incubator value, produced by the right kind of material and workmanship, backed up by an unbroken line of splendid results. The

Excelsior and Wooden Hen INCUBATORS

have a standard hatching record of a chick from every fertile egg; they maintain this splendid showing because all features of their construction—heat, moisture, ventilation, and similar details—are carefully looked after and perfectly worked out.

The Excelsior or Wooden Hen will hatch a brood before your hens stop laying. You can market your early broilers and mature pullets into quick layers at a time when both will yield an extra big profit.

Buy a "Stahl" and eliminate trouble and worry. Catalogue illustrates complete line of Incubators, Brooders, Poultry Supplies, etc. Free on request.

OF QUALITY

Winners at Cleveland and Willoughby. Birds of quality that will please. Write us. : : :

CLARK & PIKE : **WILLOUGHBY, OHIO**

P. B. CONDIT, BREEDER OF WHITE ROCKS, INDIANAPOLIS, IND.

Mr. Condit reports that he has purchased a poultry farm of eighteen acres ten miles west of Indianapolis, Ind., on the Crawfordville Interurban and the Peoria division of the Big Four railroad. He will build a home here in the near future and reside there, and intends having a model fancy poultry plant. Mr. Condit is the owner of "Ivanhoe," a fine White Rock cock valued at \$1,000, and his birds are among the winners wherever shown.

Fred Styers, Greensburg, Ind., the well known Columbian Wyandotte breeder, is advertising birds of real quality in this

great in both shape and color. In this class J. C. Ritter & Son, of Olney, Ill., won 1st and 3d hens, 3d cockerel, 2d and 5th pullets, 1st pen, silver cup best male and female, specials best female, best shaped Buff Wyandotte and best colored Buff Wyandotte. Their exhibit showed careful line breeding and a distinct family type. They are courteous gentlemen, whom it is a pleasure to meet, and thoroughly reliable and fair in their business dealings.

J. S. Haupt, Easton, Pa., reports the following winnings on his Orpingtons at the late Pennsylvania State Show: First pen White Orpingtons, first pen Black Orpingtons, first pen Buff Orpingtons, first R. C. Buff cock, first R. C. Buff hen. He also made a strong winning at the Washington, D. C., show.

**A FISHEL PULLET.**

Was sold for \$100; a winner in Alaska-Yukon-Pacific Exposition, 1909. Bred by J. C. Fishel & Son, Hope, Ind.

issue. Mr. Styers has won more prizes on birds of his own breeding at New York, Boston and Chicago than any breeder of this variety, and he is prepared to supply eggs for hatching from the best matings he has ever had. Write him for full particulars and mention American Poultry Journal.

The Missouri State Show, held at St. Louis December 6 to 11, had one of the best Buff Wyandotte classes ever shown, eight of the leading breeders of the country winning places and several good breeders did not get a place. The exhibit was

Modern Orpingtons at moderate prices, is the announcement made by the Blue Ribbon Poultry Farm, Columbus, Ind., breeders of S. C. Black Orpingtons, exclusively. They are offering 50 utility cockerels for sale. Write now and get first pick. Mention American Poultry Journal.

Buff Rocks is variety bred by Jas. W. Elliott, Bement, Ill. He also breeds Buff Cochins and Buff Cochins Bantams. If you want something good in any of these varieties, write him and mention American Poultry Journal.

VISIT TO THE H. M. SHEER PLANT, QUINCY, ILL., MANUFACTURERS OF THE ACME WAFERS, REGULATORS, LAMPS AND INCUBATORS.

Mr. H. M. Sheer met us with a glad hand, and after a pleasant conversation he took great pleasure in showing us over his factory. Mr. Sheer is a great inventor and has a room in which he locks himself when he is working on something new. Here we saw many parts and pieces of things; in fact, it was quite a curiosity shop. Mr. Sheer believes in having machines to make everything, and has a regular machine shop for making his dies, etc.; in fact, he makes his own machines complete

uniformity in each wafer turned out. Therefore it would be impossible to make a stronger or more perfect wafer.

One of the new features which Mr. Sheer has just turned out is his Tandem Wafer. This consists of coupling two wafers together just like a team of horses and thus getting their combined strength to operate the regulator. This construction will readily appeal to anyone, as it affords twice the lifting power.

His latest invention, which is a step in advance of the times, consists of a new alcohol burner for the burning of denatured alcohol. Upon examination of this burner we pronounce it a very simple and practical burner for the purpose, and we are sure it will attract the attention of those who want the latest.

His Acme incubator is a tried and tested machine, having been used by many

five years, and has succeeded in producing birds good enough to win in any show. He reports having forty very choice cockerels which he will sell at prices to move them quick. We know the kind of stock he has and can assure our readers of fair and just treatment if they place their orders with Mr. Logue. In writing him mention American Poultry Journal.

J. J. Hurlbert, R. F. D. 3, Morrison, Ill., exhibited his White Minorcas at the late Chicago show and won a large proportion of the prizes. Write for his catalogue and mating list and mention American Poultry Journal.

Geo. F. Buck, Port Clinton, Ohio, breeder of S. C. Brown Leghorns, reports that he can spare a few more of those choice cockerels at \$1.50 to \$3 if taken

for turning out these special parts whenever it is necessary to do so.

On this floor we found among other machines, a large automatic drill press which has six drills and handles six pieces at once, drilling six holes and returning to place and ready to drill six more—all done automatically. Another automatic machine turns out 10,000 screws, or other special turnings, for which it may be set, in ten hours. Four rods are started into this machine and the finished parts turned out, all being done automatically. There are some fifty special machines in the factory.

We found the woodworking department occupying the basement, and the wafer department occupying another floor. Here we found machines galore, each one in its seemingly incredulous space of time turning out some special part of the wafer—every part being machined accurately and the complete wafer being one perfect whole, there being no chance of flaws or leaks. To further insure against leaks and add strength Mr. Sheer rivets every part of his wafer together, the soldering being done afterwards, and his manner of filling and sealing his wafers is such that he secures absolute

breeders for many years past. In this machine he uses hot water heating system, one of the latest features being an extra radiating device, which assists materially in giving an absolutely even distribution of the heat. He issues a fine, large catalogue, fully describing all his products, giving much valuable information to every user of incubators. In it also will be found plans with detail description of how to build both incubators and brooders. If you are interested in artificial incubation you will do well to send for this valuable book, which is free for the asking.

Mr. Sheer's ad is always to be found in the columns of the American Poultry Journal.

Gus A. Lengfelder, R. F. D. 9, Mt. Vernon, Ill., breeder of Barred Rocks, Toulouse geese, Bronze turkeys and Pekin ducks, won six prizes at the late St. Louis show. This speaks well of his stock. Write him for prices and particulars and mention American Poultry Journal.

H. L. Logue, Neponset, Ill., has been breeding White Wyandottes for the past

at once. Write him and mention American Poultry Journal.

G. J. Bochland, R. 33, Rockford, Ill., the R. C. R. I. Red man, has an ad in this issue in which he is offering some choice cockerels for sale. He is also booking orders for eggs. Write for his mating list and mention American Poultry Journal.

J. S. Pennington, Plainfield, Ill., reports the following winnings on his Golden Wyandottes: St. Louis, Mo., December 6-11, 1909, 2d cock, 3d cockerel, 4th pullet; at Chicago, 1909, 5th cock, 4th cockerel, 3d pullet.

M. Uhl & Co., New Washington, Ohio, the baby chick people, have an ad in this issue. They please their customers. Write them for what you want and mention American Poultry Journal.

Look up the ad of G. W. Garlock, Box A, Ft. Atkinson, Wis., in this issue. He is offering something choice in Barred Rocks. He ships on approval. Write him now and mention American Poultry Journal.

Giant Bronze Turkeys .. Best .. America's Part. Wyandottes

At the GREAT MADISON SQUARE GARDEN SHOWS of 1907, 1908 and 1909, our Bronze Turkeys and Partridge Wyandottes won more premiums and more points than any competitor. At the above 1908 show our birds won MORE FIRST PRIZES THAN ALL COMPETITORS—a record seldom equalled. THE CHOICEST YOUNG TURKEYS AND WYANDOTTES WE EVER RAISED FOR SALE NOW. REMEMBER, all stock found not as represented may be returned at our expense and your money will be cheerfully refunded. All birds farm raised, vigorous and cannot be excelled for utility purposes. Write what you want. We'll try to please you. Catalog for stamp.

SOME NOTES ON THE BUSINESS SIDE OF POULTRY RAISING.

The happy-go-lucky life of the farmer has passed with changing conditions. Today the successful farmer is a business man, a machinist, somewhat of a chemist and plant physiologist; in fact, an all around man. Does he raise poultry for market he is acquainted with the best methods of raising the chick to the final handling the killed chicken over to the dealer in the very best marketable condition. He makes capons of his surplus roosters, and thereby doubling their size and doubling their value, so that a four-

G. P. PILLING & SON, PHILA.

pound rooster at 15 cents is changed into an eight-pound capon at 30 cents, just a little difference of \$1.80 on the profit side. He uses the most approved poultry markers and thus reads the history of each fowl by looking at the foot. He kills them in the most humane, clean and scientific manner by the use of the French Poultry Killing Knife. If you have not already a French Killing Knife, send 50 cents to G. P. Pilling & Son Company, Arch street, Philadelphia, Pa., and they will send you one, and will also send you free of charge a pamphlet illustrating their various poultry instruments. Little things, say you! Just so, but please remember that the little things make all the difference between profit and loss. Get the "Pilling Habit" and write for information.

R. C. Black Minorcas and Black Cochins Bantams are varieties bred by Dr. J. N. MacRae, Galt, Ont. The Doctor is a new advertiser with us, but comes highly recommended, and our readers are assured of a square deal and their money's worth. Write him for prices and particulars and mention American Poultry Journal.

Fairview Poultry Farm, R. R. 25, Williamsonville, Ill., breeders of White Plymouth Rocks, made three entries at the late Chicago show and won three prizes, and this in the hottest class ever gotten together in the West. Write them for prices on cockerels and mention American Poultry Journal.

We are pleased to announce to our readers that A. Didrickson, R. 1, Whitewater, Wis., is again advertising his noted R. C. Black Minorcas in our columns. He has been breeding and exhibiting this variety for a number of years, and knows how to produce the good ones. He will treat you right.

Thaddeus A. Allee, 1325 East 55th st., Chicago, Ill., showed some of his White Langshans at the late Chicago show and captured the blue. He has some grand birds for sale. Write for prices and mention American Poultry Journal.

Jones' White Orpingtons won at St. Louis. That is the way his ad reads in this issue. Look it up. It will interest you. Address J. W. Jones, Brookfield, Mo., and mention American Poultry Journal.

Wm. H. Hoover, Polo, Ill., the well known Barred Rock breeder, is offering 10 fine pullet-bred cockerels this month. Better get one of these and improve your stock. Write him and mention American Poultry Journal.

Lembke's R. C. Reds win wherever shown. They have 200 choice cockerels to spare. Better order one now. Address Annah Lembke, Griswold, Ia., and mention American Poultry Journal.

The Culver Poultry Farm, 921 Burnham, Benson, Neb., is offering baby chicks at 8 cents each. Send for their large catalogue and mention American Poultry Journal.

LIGHT BRAHMA CHICAGO WINNERS.

The great Chicago show last month will not soon be forgotten. It was a marvelous collection of many thousands of the best birds of all classes to be found in the country. Many fine individual displays were made which were a great credit to the exhibitors. None of these displays attracted more favorable comment or attention than the magnificent exhibit of Light Brahmas made by the River Home Poultry Yards, Box B, Perrysburg, O. They "cleaned the platter," winning 1, 2, 3, 4, 5 cock; 1, 2, 3, 4, 5 hen; 1, 2, 3, 4, 5 cockerel; 1, 2, 3, 4, 5 pullet; first pen, and first display. The River Home Poultry Yards are easy winners with their Light Brahmas wherever entered, and they are exhibiting in the largest shows in the United States. Their catalog, which they mail for six cents in

pay this amount to learn how to make a success of the poultry business? Read the full page ad on another page in this issue and then send for a copy. It will be a dollar well spent.

I am a young stenographer, just starting to make my own living. I feel that my chances of getting along would be much better if my clothes were always neat and fresh-looking, yet I'm afraid my means won't allow me to go as far as I'd like in this direction. Can you give me any suggestions? Miss Poorandproud.

You are right, dear, in wanting to make as attractive an appearance as you can, and I think I can help you out. Why not get Simpson-Eddystone Prints, manufactured by the Eddystone Mfg. Co., Philadelphia, and make them up simply, yet stylishly. They are surprisingly inexpensive, and yet their patterns are so pretty, the colors fast, and the quality

nothing but the very best in shape, size and color, and as near the Standard in markings as possible; have had my stock scored by the most reliable poultry judges we have; have exhibited my stock at some of the largest shows in the west and always won the gold special and silver cups over all the R. and S. C. Reds exhibited. I try to always fill all orders satisfactorily, and send full value for the money. "Honesty" is my motto.—Annah M. Lembke, Griswold, Ia.

See the Orpington ad of the Cheviot Poultry Farms, Cincinnati, Ohio. If you want something choice in Orpingtons write them and mention American Poultry Journal.

Fred Styers, R. F. D. 25, Greensburg, Ind., breeders of Columbian Wyandottes, announces the fact that he is prepared to fill orders for the best Columbian eggs

This birdseye view of Sunnyside Poultry Farm will give the readers of American Poultry Journal an idea of the new home of King's famous Barred Rocks. This farm is situated in one of the most beautiful valleys of York county. The buildings are situated on the summit of a gentle southern slope, with beautiful rolling meadows for a background. The farm contains 60 acres of choice farm land, giving the chicks range and green food, all of which are necessary attributes. The farm lies west of York City, one and three-quarter miles, half mile from York

stamps, tells all about their stock and is really a poultry art book. Send to them for their Light Brahma catalog.

A NEW POULTRY BOOK.

Mr. Ernest Kellerstrass, Kansas City, Mo., the man who has made White Orpingtons what they are today, has just issued a book in which he tells his secrets of success in the poultry business. It tells how he made \$3,600 from 30 hens in one season; how he mates his fowls; how he raised his famous \$10,000 hen "Peggy;" and much other information that can only be obtained by getting a copy of this book. The price of this book is only \$1.00, and who would not

so good that they will prove most serviceable.

If you are handy with the needle and can spare a little time you could make up several gowns, say one of the Fast Hazel Browns, another of Shepherd Plaid, or one of the beautiful designs in Black and White. You could thus have quite a pleasing change of costume for a comparatively small outlay. Stop in any dry-goods store when you're downtown and see how pretty these goods really are.

I have been breeding the R. C. Reds exclusively for the past ten years, and now have as fine a flock of Reds as there is to be found. I use the greatest of care in mating up my breeding pens, using

& Dover trolley line, one and one-quarter miles from Eberton, and one-quarter mile from Pike. It contains 20,000 square feet of floor space, divided into eleven houses, as follows: Brooder house, 271 feet long, with boiler; laying house, 227 feet; cockerel house, 127 feet; matured young chick house, 320 feet; there are five 2-story colony houses, 24 by 16 feet, and two brooder houses, one of which is 100 by 20 feet and one 50 by 16 feet. Equipped with steam heat and running water in all the houses. We kindly ask a share of your trade and guarantee to all a square deal.

G. M. King, York, Pa.

ever sold. His new catalogue will be out in February. It is free. Send in your name and address for one now and mention American Poultry Journal.

Temple & Merriman, R. F. D. No. 5, Gouverneur, N. Y., the White Rock breeders, are offering some of their breeders and young stock at greatly reduced prices, to make room. They are especially strong in cockerels. Write them for prices.

Write S. Banford, Box H, Hewvelton, N. Y., for prices on Rhode Island Reds. He can fill your order for exhibition or breeding stock of the best quality, and his prices are reasonable.

240-Egg Reliance Freight Prepaid \$10.00

OVER 200,000 have succeeded with this machine, and now it is still further improved. Metal-covered all 'round—front, back, and sides, top and bottom—high-grade galvanized iron. Also metal legs and metal lamp. The **safest** incubator built; the easiest to heat; the surest to keep at exactly the right temperature. Simple as A B C; self-regulating; self-ventilating. Lumber Walls, dead air space, insulating walls, metal walls and double wooden doors—metal-covered. All complete, ready to start your hatch; no extras to buy, and freight prepaid.

RELANCE INCUBATOR CO., Box 550, FREEPORT, ILL.

A SIDE TRIP TO THE HOME OF THE PRAIRIE STATE INCUBATOR COMPANY.

(By a Poultry Crank.)

There are very few people who know, or even think, from whence came the name given the Prairie State incubators and brooders. These machines are without doubt wider and more favorably known than any other on the market, hence it will be interesting to every one connected with poultry culture to know something about the history of these popular machines, the firm who make them and how they were christened.

As stated above, few, perhaps, ever gave thought to why they were called the Prairie State incubators and brooders. Well, it happened this way: J. L. Nix, head of the Prairie State Incubator Company, is an Illinoisan, and it was in the good old "Prairie state" that he made the first machine bearing this now well known name. Mr. Nix is a loyal American and his ardent loyalty induced him evidently to name his "pets" after the state in which he then lived.

It was not long after inventing the first Prairie State incubator, however, that Mr. Nix became associated with others in the manufacture of his machines, which necessitated moving to the present home of the Prairie State incubators and brooders at Homer City, Pa., and in reality, while an original product of Illinois, they have always been made at Homer City, Pa.

Here the Prairie State Incubator Company started in a modest way, and by conscientious, honest effort here they have one of the largest and best equipped factories in the country and, furthermore, one of the best equipped experimental poultry plants, an innovation and, I might add, a necessity which no other incubator concern has yet adopted, for the sole purpose of getting at the bottom of the problem of artificial incubation in a practical way.

It is a striking illustration of the desire and determination that Prairie State machines should represent the fullest practical principles possibly to apply, and this with other important factors later mentioned account very largely for the great success of these machines.

Mr. Nix is a man deeply interested in scientific research work, especially that pertaining to artificial incubation, and if you could step into his laboratory you would be surprised. You would get the impression you were in some chemical institute where investigations, experiments

and research work are being performed to discover the origin and composition of everything imaginable, so extensive is his equipment for finding out the intricacies and unknown factors of artificial incubation.

It is due Mr. Nix to say there is no other man interested in poultry culture, that is doing more, and I dare say as much, to solve the puzzling problems of artificial incubation for the benefit of the poultry world.

For years he has ardently worked and experimented, giving months of time and effort, gaining new interest where ordinary men would give up in despair; giving freely the results of his labors to the world without recompense further than

ducts his experiments in finding out all candid to admit there is much to learn.

If you would visit the Prairie State factory you would find Mr. Nix more enthusiastic in showing you the results being obtained on their experimental farm than in showing you the equipment in their factory, because the results their machines produce are a source of great gratification to him and a practical demonstration to the poultry world that his efforts are successful and his ideas are not theories.

In artificial incubation the claims of many are based on theory; they don't go to the trouble or expense to work them out in actual practice, and this is one of the reasons many people are confused on the subject and many yet ridicule the practice of hatching eggs by mechanical means.

Ever since the Prairie State entered the field, it has been regarded as the leader, and ever since Mr. Nix became interested in artificial incubation he has steadfastly worked to solve its mysterious problems.

This is without doubt the reason the Prairie State machines have been able to maintain their leadership. A letter which they received the other day from a very prominent poultryman tells the secret of their success and indicates that Mr. Nix's tireless efforts have not been without reward. I reprint the letter herewith because it conveys the situation so much better than I have been able to in my inexperienced way as a writer on this subject:

"Laomi, Illinois.

"Prairie State Incubator Co.

"Gentlemen: I am one of those fellows called poultry cranks, breeding the famous Single Comb White Leghorns, and have had the ups and downs in the poultry business that every one has, but few live over. I have had the troubles due to lack of experience, vain fancies, great pocketbook imaginations and hard luck, as they call it, in the end.

"Now, what I want to say for the good of the new beginners and the poultry fraternity at large is, profit by my experience, use good hard sense; buy Prairie State incubators and brooders, follow instructions and you will reach the much desired goal—success. It is no fairy tale; just get some good will power and stick-to-it-iveness; use good oil and good eggs and Prairie State incubators will hatch more chickens than any broody old hens. The Prairie State colony brooders and universal hovers will raise them. I just want to say this: After ten years of experimenting with everybody's 'best' incubator and a lot of deathtraps called

J. L. NIX.

that is possible to know about this interesting question of artificial incubation. Being a most modest man, though he has discovered many important factors, he is legitimately obtained through the improvements he has made from time to time added to the Prairie State machines.

Our readers will perhaps remember two years ago Mr. Nix's experiments with the "hen that stole her nest" which gave a pretty good idea how thorough, how deep and how comprehensively he con-

THE PEERLESS "RINGLETS"

True to Their Tradition, Are Again Great Winners at New York

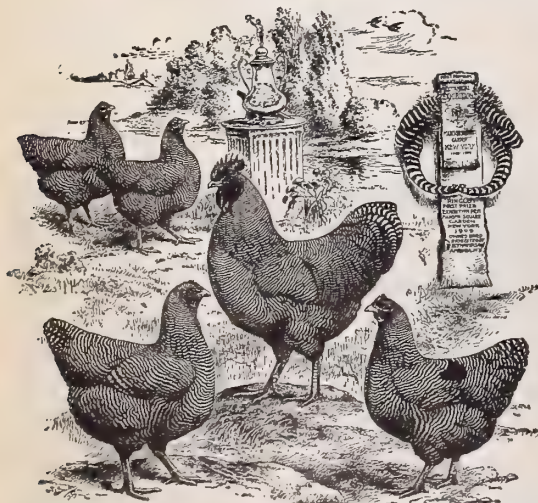

At the Imperial Madison Square Garden Show, 1909
E. B. Thompson's Barred Plymouth Rocks

win First, Third and Special Prizes on Exhibition Pens; special prize Cock; special prize Cockerel; numerous specials on hens and pullets, and the Harding \$50 Challenge Silver Cup offered for best exhibition pen. The race at this 1909 New York Show was a Marathon for speed and quality, and my First Prize Silver Cup Exhibition Pen was declared by expert opinion to be the finest ever exhibited—a paragon of perfection—and created a sensation as the finished achievement in modern Barred Rock breeding.

The "Ringlets" are always imitated—but never equalled. They are first in record, first in quality and first in popularity. Their record at New York for 22 years is **GOLD LINED**—it is a calendar of successive victories demonstrating step by step their irresistible advance towards the world's absolute leadership.

The Enormous Prestige of the "Ringlets" Created by Superlative Quality Has Made Them the Standard by Which All Other Barred Rocks are Judged

I now have on my farm the largest and finest lot of superior exhibition and breeding birds I ever owned; they show the "Ringlet" barring and the sharp contrasting colors that win under all judges.

"Ringlet" First Prize Exhibition Pen and Winners of Sweepstakes Silver Cup at Madison Square Garden, New York, 1909.

Richly illustrated 58-page catalogue mailed upon request; it is full of original pictures of New York winners from life. 1000 grand breeding and exhibition cockerels for sale. Elegant hens and pullets in any number. Show birds fit to win in any competition. You may have the product of my skill, reaped by 30 years' experience, at reasonable prices. Your wants will have my very best and personal attention.

brooders, both high-priced and medium-priced, my poultry business did not pay off the mortgage, but when I finally settled on the Prairie State, things took a change. I really believe the Prairie State machines will revolutionize the poultry business, and there will be less failures than in the past. Now, don't experiment. It costs money. Just buy the Prairie State machines.

"This is an unsolicited testimony, and I wish you could use it to some good. I like to tell the good news to others."

"O. C. Van Doren,

"Owner of the Purity Stock Farm where Single Comb White Leghorns roam."

The above letter tells the whole story of the Prairie State Incubator Co. in a nutshell. It is the genuine merit and high standard of practicability of their machines that have made them so universally in demand. Just as Mr. Van Doren says, it is costly to waste time and money on incubators and brooders that are as yet in the experimental stage when one can get time-tried, modern machines that are the result of years of effort and experience, and which are proving every day practical successes in the hands of both beginner and expert.

We heartily commend and recommend the Prairie State Incubator's Co.'s product to our readers, knowing in doing so they will find these machines eminently satisfactory in every respect. They are machines which will not only hatch and assist you in rearing the greatest number of chicks from a given number of eggs, but you will get chicks that are larger, and hatched with vigor and vitality that will enable them to develop and grow to the marketable point in the shortest possible time—hence proving more economical in another respect. You will find they will require less time, less watching, and being made of high-grade material will last much longer and prove the cheapest and best in the end.

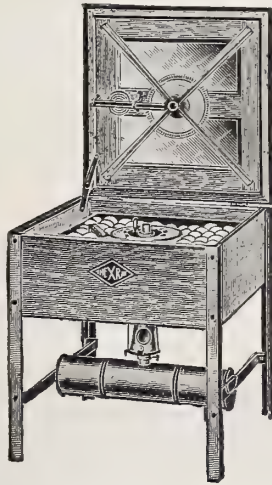

We advise our readers to send their name and address to the Prairie State Incubator Co., Homer City, Pa., to be placed on their mailing list so they will receive a copy of their 1910 catalogue, which we understand will be ready for mailing about January 1.

"We lead, others follow."

ONE GALLON OF OIL HATCHES 100 CHICKS.

That's the claim of the X-Ray Incubator. It is more than a claim, it is a guarantee.

The makers of the X-Ray Incubator, Wayne, Neb., positively guarantee that their machine will hatch 100 chicks with one gallon of oil. That is just a part of the point. The rest of it is that you put that gallon of oil in the lamp to start

with and you give it no further attention during the hatch.

Most incubator lamps have to be filled every day or nearly every day. That's fifteen to twenty fillings. The X-Ray requires one filling. They burn three gallons of oil, and upwards, to make the hatch. The X-Ray consumes one gallon.

The X-Ray incubator, which we think enough of to illustrate, is in many respects a wonderful machine. It is so essentially different in make and operation from any other incubator that it

must be considered in a class by itself. The saving of oil is wonderful. The little attention it requires and its perfectly sure automatic regulation are no less wonderful.

The X-Ray differs radically from old-style incubators in other particulars. The lamp is beneath, in the center. The heat comes up through the center and is distributed equally to the four sides and all over the chamber. The egg chamber is not flat on the bottom but slopes down on all sides toward the center—a wonderfully effective plan for keeping the heat absolutely even all over the hatching chamber. The double glass door is above, not at the side. Ventilation is perfect. Fumes have a chance to rise instantly when the doors are opened. They all escape. Fumes and bad air do not escape readily from the side doors of old style incubators. Of course the heat in the X-Ray chamber passes off with the hatching fumes. But here is one of the best of all the X-Ray provisions. That heat is restored to hatching point again in fifteen minutes.

It is a machine that every chicken raiser ought to know. The manufacturers send it out everywhere freight prepaid. It is regularly advertised in this paper. A letter or card to the manufacturers at the address given in the advertisement will bring catalogue and full particulars.

The City of Cedars Poultry Yards, Lebanon, Ohio, has a strong ad elsewhere in this issue. They are breeders of White Plymouth Rocks and at the late Cincinnati show, in strong competition, won three firsts. This is proof of the quality of their stock. Send for their free mailing list and mention American Poultry Journal.

T. A. Faulds, London, Ont., Canada, guarantees to please every customer with his Rose and Single Comb Black Minorcas. Write him for full particulars and mention American Poultry Journal.

Edward Brown, R. R. 37, Mendota, Ill., the well known Barred Rock breeder, is offering some fine large cockerels for sale cheap. If you want size and quality, write him and mention American Poultry Journal.

YES—Count Your Chicks Before They're Hatched" IF you are using the— Tycos Thermometer

The success of an incubator rests with the Thermometer—if your Thermometer is wrong, it means a poor hatch, loss of eggs, loss of time and loss of money. If your Thermometer is a "Tycos" your success is assured, for "Tycos" stands for Temperature Insurance. Therefore, if your incubator is equipped with a "Tycos" Thermometer you can **Count Your Chickens Before They're Hatched**, in spite of the old saying to the contrary.

Thermometers may look alike, but there is a great difference in their quality; and it's this quality that makes Thermometers having the "Tycos" trade mark attached dependable. Although the Thermometer is the smallest part of an incubator, it is the most important. It really is the heart of an incubator, and you know that the heart is the vital organ of the human body.

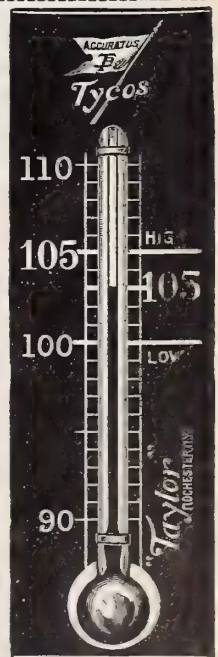

When you buy a "Tycos" Thermometer you get 60 years' experience and skill in Thermometer making. When you buy an incubator see that it is equipped with a "Tycos."

Always ask for "Tycos."

Insist upon having a "Tycos."

Write to-day for booklet,
"TEMPERATURE FACTS." It's FREE.

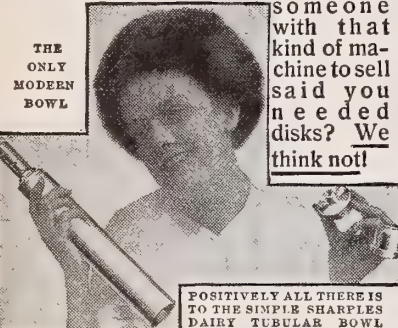

Taylor Instrument Companies, Rochester, N. Y.

Would You?

Would you buy 40 to 60 milk pails just because someone with pails to sell said you needed that many to milk a cow? Certainly not!

Would you buy or bother with an old style cream separator, with 40 to 60 disks in the bowl, just because someone with that kind of machine to sell said you needed disks? We think not!

Sharples Dairy Tubulars are The World's Best Cream Separators—and have no contraptions. Twice the skimming force. Fastest, cleanest skimming. Easiest running. Most durable. Sales exceed most, if not all, others combined. Probably replace more common separators every year than any one maker of such machines sells. World's biggest separator factory. Branch factories in Canada and Germany. These facts prove contraptions are not needed.

FREE POULTRY BOOK AND CATALOGUE FOR 1910.

Poultrymen are on the watch every year about this time for the Big Free Poultry Book and Catalogue which Cyphers Incubator Company, Buffalo, N. Y., has published year after year for a dozen years or more. Every year it is the biggest and best illustrated poultry book and catalogue published by any firm, and it is eagerly looked for by those who have been fortunate enough to know of it, not simply because it is free, but because it contains more reliable information on the standing and progress of the poultry industry from one end of the country to the other than any other book—such information as cannot be secured in any other publication.

How do these five chapters strike you as an example of its contents:

Chapter 1—"Successful Hatching with Incubators."

Chapter 2—"Incubating on Cyphers Company Poultry Farm."

Chapter 3—"Brooding on Cyphers Company Poultry Farm."

Chapter 4—"Feeding Chicks on Cyphers Company Poultry Farm."

Chapter 5—"Laying Records on Cyphers Company Poultry Farm."

The first chapter tells of the methods and success of our customers; the other four tells of actual big things being done

on our own \$40,000 poultry farm—and tells it straight.

It would take years of travel and more money than most of us can spare to visit all the big poultry plants and duck farms that are illustrated in this book, and before doing so you would need to get the names and addresses of the prominent—the leading poultry fanciers, proprietors—of these farms. You would like to see their photographs before visiting their plants and for this reason, if for no other, you would find it advisable to get this book—the only one that contains what you would need. It would occupy a considerable portion of your time even if you limited your visits to the government experiment stations which are illustrated in this book; and certainly it would be a great help to you to read the letters from poultry farmers, poultry fanciers and government station experts, all having something of interest to say about the great poultry industry.

If your interest happens to be centered upon incubators and brooders and the numerous articles poultry keepers use, and the equipment of poultry farms and poultry houses, you can get in this book more valuable information, explicit descriptions and superior illustrations on the subject than can be obtained in any other way except at great expense.

Then this book contains tales of success of a few of the money-makers in the business; men who are now comparatively rich. There are illustrations of winning specimens of different varieties of fowls; photographs of Cyphers Company's mammoth incubators holding thousands of eggs at one time; their electric incubators and brooders, and details of the interior and exterior construction of their Standard incubators and brooders for 1910.

This is by no means the total contents of the 160-page book which we offer you free for the asking, but it is all we have room to refer to now. If you wish to get one, all that is necessary is to write to

the branch house of Cyphers Incubator Company that is nearest to you, being sure to ask particularly for Free Book No. 1. Address Cyphers Incubator Company, Department 30, Buffalo, N. Y., Boston, Mass., New York City, N. Y., Chicago, Ill., Kansas City, Mo., or Oakland, Cal.

We call the attention of our readers to the ad of Thaddeus E. Allee, 1325 E. 55th St., Chicago, Ill., which appears in this issue. Mr. Allee has bred White Langshans for the past 15 years and his birds have won wherever shown. Our readers should correspond with him at an early date, as he has some very fine birds for sale and orders for eggs should be booked early. When writing him mention American Poultry Journal.

White Plymouth Rocks and White Wyandottes are the two varieties bred by the Glendale Poultry Farm, R. F. D. 2, Atkins, Mich. Forty acres devoted exclusively to these two breeds. They have both exhibition and utility stock for sale. Send for illustrated circular and mention American Poultry Journal.

Reds, Rose Comb Reds that are red to the skin, is what you will find on the Edgedale Poultry Plant, Wheeling, W. Va. Write for descriptive price list and mention American Poultry Journal.

S. A. Hummel, Box 52, Freeport, Ill., will send you his 1910 catalogue free if you mention American Poultry Journal when you write him.

GALBRAITH "NEW LAND" FRUIT TREES **FREE FROM DISEASE GROW FASTER**

Nebraska trees thrive best everywhere—famous for heavy fruiting. Apples and Peaches 5c.

NEW CARLISLE, OHIO.

Your Name and Address **That's All**

GOVERNMENT reports show that strawberries produce more dollars per acre and give quicker return than any other crop. Our 1910 Strawberry Text Book teaches the Kellogg method of growing larger crops of better berries than can be grown in any other way. It explains how to fertilize and prepare the soil; shows how to prune, set and mate the plants. Every detail of the work is made perfectly clear, including cultivation, spraying, mulching, picking, packing and marketing. Growers who have this book say it is worth its weight in gold. You may have it **FREE**.

R. M. KELLOGG COMPANY, Box 325 Three Rivers, Mich.

"HAS THE INCUBATED CHICK A MOTHER?"

It begins to look like our friend, Mr. P. M. Wickstrum, the Queen Incubator Man, has started something. On another page of this paper, in his incubator advertisement, he repeats his assertion, "The chick that is born in a Queen incubator won't have any mother," etc.

This revives the old question, "Who is the mother of the chicks, the hen that lays the egg, or the hen that hatches it?" After years of school house debating the dispute was finally settled in favor of the biddy that did the laying. This being true, it is quite possible and even probable that the incubated chick has a mother some place in chickendom.

But it's no easy matter to trip up a man of Wickstrum's wide experience in poultry raising. He good naturedly replies that you must read the whole sentence to get the sense out of it. He adds that poultry men and women are not so interested in whether the chick has a mother as they are in how many husky, strong brothers and sisters the chick has.

No incubator manufacturer in this country has gone into the practical side of poultry raising deeper than P. M. Wickstrum, and few have gone as far as he has in meeting the public more than half way in his business dealings. He advocates extended free trials, direct-from-the-factory prices, prepaid freight and an unqualified

guarantee covering a period of five years. "I'll go the limit," he declares, "to let readers of your paper know my incubator. If my trial plan isn't liberal enough, I'll do anything more that any man or woman suggests, if it is fair to both of us."

"I'm out for incubator business, and, fact is, I am getting it, and I don't have to depart from square, honorable business methods either, because my incubator is a wonder. Why, if Cook or Peary had had a Queen incubator along and set it square a-straddle of the North Pole, they would have had fried chicken instead of fish blubber to fill up on! My incubators are all going out and none coming in. Keeps me busy some days just reading the good letters I get from folks who try out Queens. Tell my friends I am still doing business at the old stand, Lincoln, Neb. (Box 4), and expect to be here thirty years more. One of these days I am going to print in your paper some of the letters I get from my customers, just for the benefit of your subscribers. I am certainly a warm exponent of intensive chicken farming. It's a great game. More money in it than any other kind of farm work."

N. V. Fogg, Box R, Mt. Sterling, Ky., the well known S. C. White Leghorn breeder, is advertising eggs from choice matings in this issue. Mr. Fogg has been an advertiser in these columns for a number of years and is well known to our readers, therefore it is unnecessary for us to say anything further about him

or his stock here, except to request our readers to send for his mating list and catalog.

Edward Chambers, Aurora, Ind., exhibited his S. C. Buff Orpingtons at the late Cincinnati show and made almost a clean sweep on the prizes he was competing for. Look up his ad in this issue. He guarantees satisfaction. Men-American Poultry Journal when writing him.

"Ringlet" Barred Plymouth Rocks are bred by F. R. Green, Lake City, Iowa, are just the kind you have been looking for. He is pricing them low when quality is considered. Better write him at once and get something for exhibition or breeding. Mr. Green is one of the oldest Barred Plymouth Rock breeders in the West, having been at it for 21 years. Write him for prices and description and mention American Poultry Journal.

Don't overlook the ad of Bradley Bros., Lee, Mass., the noted breeders of Barred Plymouth Rocks. This firm will treat you right and give you your money's worth. Place your order for eggs now and mention American Poultry Journal.

Cortland Incubator Company, Cortland, N. Y., are advertising for agents. Better write them today and find out what they have to offer. Don't forget to mention American Poultry Journal.

Make Your Hens Lay

When Eggs Are Worth Most

HENS relish juicy bugs and worms because these supply the protein feed they require to make eggs. The craving for meat and bone food—protein feed—is simply nature working out the egg-laying proclivity. Hens **must** have food rich in protein or egg-making elements, or it will be impossible for them to lay.

Our little book tells you all about the how and why of this. It makes you master of egg-getting. It's a book that opens up to you the real possibilities with poultry.

It's simply a matter of knowing what food to supply and how to prepare it. It is now established beyond all doubt that raw, green bone, with adhering meat and gristle, cut fine, is the ideal egg-producing food. Its cost is a mere trifle and its preparation is easy with a

Mann's Latest Model Bone Cutter

Sold On 10 Days' Free Trial—No Money Down

It turns easily and rapidly, cutting green bone, with adhering meat and gristle, wasting nothing.

Its self-governing feed automatically adapts the cutting to your strength, so that anyone can use it.

Its open, hinged cylinder is easily cleaned, and it takes in large bones. It is strong, durable, and requires few repairs. We want you to try one.

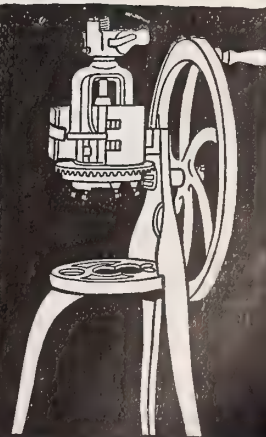

We will send you a Mann's Latest Model Bone Cutter on **10 Days' Free Trial**—no money down. If satisfied after the trial, buy it. If not, return it at our expense.

You want our good books, at any rate, send for them. We'll forward by return mail.

F. W. Mann Co., Box 56, Milford, Mass.

A FREE BOOK FOR YOU ON MAKING HENS LAY

OVERHEARD IN A CAR.

I was going down from Sidney to Piqua recently on the trolley line and at a country road station several farmers came in and two of them occupied the seat in front of me. We had gone a mile or two, and my attention was first attracted to their conversation when one looked out and in neighborly terms said, "Well, there's Charley moving away." I looked out mechanically while the second farmer replied to the first's remark by saying that he guessed Charley had to sell his farm because he got mixed up in some investment that cost him a lot of money. "I see some of the farm papers won't publish fake investment ads any more."

"Good thing, too. We are not likely to get caught like Charley did, but the boys at home used to be foolish about reading all that kind of stuff. They didn't spend any money, but it made 'em a little dissatisfied with the 'old farm' sometimes."

"We don't take a paper now that allows such stuff in it. There's enough that don't."

"I saw something in last week's paper that surprised me. I think it was in—well, I can't say now. Anyway, some fellow that has a lot of time on his hands figured out that there are 250,000,000 chickens in the United States, and he said if they were lined up single file and allowed twelve inches for each one that it would make a line over 47,000 miles long."

"Why, that would reach nearly twice around the world."

"That's what this fellow went on to say."

"The chicken business isn't what it used to be, but I guess it would be about the same if we didn't do it differently. We both used to say 'they eat their heads off,' but we know better now, and that man from Tawawa that bought the little place next to the farm that Charley had to sell is making money right along. Our folks are buying this thing and that for the chickens, and—"

"Piqua—everybody change." The conductor's voice was strong enough to carry all the way across the Miami valley.

"This chicken talk makes me think. I must go to the Ohio Marble Company,

while I am in Piqua, and order some Pearl Grit. That has done a lot for our chickens, the folks say. They say they think it is better than it was several years ago, but I guess—"

"But feeding it right along keeps hens in better shape is the way our folks figure it out. We have fed it a long time. While you're there tell them to send me another bag. Pay for mine, and I'll settle with you."

"They told me the last time I was in there that they had printed a new book about Pearl Grit, and I asked the Ohio Marble Co. if they would mind sending one all the way from Piqua, Ohio, to brother Joe out in Iowa. They sent it and wrote him that I asked them to. Well, he wrote me about a week after that and said that they had been feeding Pearl Grit to their poultry for three or four years, and that they couldn't get along without it now. He poked a little fun at me by saying the reason I hadn't heard from him for six months was because they were all too busy gathering eggs. My! But they send out a lot of free books, but they say a new customer always sticks."

"What time you going back?"

"Eleven o'clock car."

"Good morning."

LARGE SALES ATTEST THE CUSTOMERS' SATISFACTION.

Montgomery Ward & Co. are repeating this month the large advertisement that we ran for them in last month's issue. It is a group of bargains in poultry supplies that all will do well to read carefully. There is this about Montgomery Ward's goods—they are low in price, yet are of standard quality; and the fact that they guarantee every purchase to suit you or stand ready to refund the price on return of the goods affords everyone an assurance of satisfaction. They have been in business thirty-seven years, and were the first concern to unconditionally guarantee satisfaction or take back the goods without a question.

Their annual sales in poultry supplies run into very large figures. One single month's sales of crushed oyster shells alone reached a total of 150 carloads, all sold in single 100-pound bags direct to poultrymen.

Yet the poultry supply end of their business is but a small fraction of their total business. As you will see when you send for and receive a copy of their new, large catalog, they sell everything that anyone can use, eat or wear, about the home, farm or elsewhere. Their catalog is often spoken of as "a great city store brought to your door." Please mention this Journal when sending to them for their catalog, a copy of which is awaiting you free and postpaid.

James Kugler, Jr., proprietor of Maple Hill Farm, Frenchtown, N. J., has one hundred cockerels to dispose of at bargain prices. The finest and best strain in the east are grown on this farm, and every bird a genuine buff. The quality of their stock is shown by winning at New York, Trenton, N. J., and Easton, Pa., and last week won first cockerel and second cock at Dover, N. J., with Stanton, judge. If you are looking for good quality and a square deal write to Maple Hill Farm (174 acres devoted to Buffs).

H. Burkholder, Clyde, Ohio, who makes a specialty of breeding Barred Plymouth Rocks, exhibited some of his birds at the Marion, Ohio, show and won first cock; first, third, fourth cockerel; second hen; fourth pullet; fourth cockerel and second pen. If you want something good at a reasonable price, write him now and mention American Poultry Journal.

Those desiring Single Comb White Leghorns will do well to investigate the advertisement of the Lake View Poultry Farm, which appears in this issue. Mr. Koch, the proprietor, is a man of splendid business ability, and has the "goods" with which to make good his promises. We therefore have no hesitancy in recommending his stock to our patrons.

C. W. Bryant, Hamilton, O., won on Barred P. Rocks at the late Cincinnati show as follows: First, fourth hen; first pullet; third cockerel and third, fourth cock. Six premiums on eight entries. No pens shown.

Have you read the ad of W. R. Fishel in this issue? Better do so now. He is offering 1,500 cockerels of the new Standard type of White Plymouth Rocks.

Don't Be Led Away!

By great big claims and great big copy. Just play you were from Missouri and have got to be shown. Wins at Fall fairs don't mean proven claims of quality or flaring ads one has the stock. See what my own stock did last winter at Madison Square in competition with the best skill could produce or money buy. 1st, 4th and 5th cockerel; 1st and 3d pullet; 2d hen; 2d pen (broken feather in cock's tail put pen back from first place); 5th cock; 1st collection (second time in 3 years, never done before); A. P. A. special best cockerel; special best shaped male, special whitest male, and other specials. Don't that convince you my

White Wyandottes

lead the world? As sure as you are a foot high such stock breeds, it is this quality of goods you want. Blood lines? Birds that win and breed winners. Stock that can win for you. Stock that is mated by the leading specialist in the world. Look up and see who started the leading breeders of the breed. Don't you need quality? Don't you need show birds? Breeders to improve your flock? To make a new start

with stock that's right? That you made a mistake once need not discourage you. Get right! I am the lad to furnish you what you need. State your needs to the breeder who has made possible these best flocks. Send 10 cents for illustrated catalogue.

Arthur G. Duston, Box 1020, South Framingham, Mass.

WHERE QUANTITY AND QUALITY COUNT.

The nominal newspaper postage rate, at which publishers deliver their publications to the subscriber, makes possible a sowing of appropriate literature of an educational nature that permits and encourages the broader development of many lines of business. The one work that has benefited as much or more from this permitted postage rate is farming. Had an excessive postage rate prevailed, publishers in turn would have been compelled to charge the subscriber enough more to cover it. An increased subscription price would have had a tendency to small circulations. Small circulations would have curtailed quality. Curtailed quality would have held in check that educational growth from which the country has benefited from one end to the other. An example of what a consistent subscription price has done from a quality and quantity standpoint is shown in the Farm and Home, of Springfield, Mass., and Chicago.

At this time a particular inducement is being offered subscribers, as announced elsewhere. A free copy of Powell's "Making Poultry Pay" is being given with a three-year subscription at \$1, or one-year at 50 cents. To absolutely give away a book of this kind a paper must itself be good enough to secure voluntary renewals from new subscribers added under this offer, and the fact that the offer is made is evidence of the confidence of the publishers as to the quantity and quality of Farm and Home contents.

PROPER FOOD FOR CHICKENS.

Probably one of the greatest mistakes a poultryman can be guilty of is too many radical changes in the food he furnishes his chickens. It is a sure way to bring about digestive troubles and destroy the usefulness of the fowls. The food that gives the most satisfactory results should be used as long as possible.

Many poultrymen have used with great success cut green bone. It not only is greatly relished by chickens, but has the added value of making the hens lay. It is necessary that the poultry keeper should have a bone cutter that can cut all scrap bones, and the Crown Bone Cutter, made

by Wilson Bros., Easton, Pa., is one of the quickest and best machines with which to prepare the food. It cuts for the chicks as well as the chickens.

Their catalog, with full information on this subject, can be had free by addressing Wilson Bros., Box 801, Easton, Pa.

J. S. PENNINGTON, PLAINFIELD, ILL., BREEDER OF GOLDEN WYANDOTTES.

One of the new advertisers to be found in this issue is J. S. Pennington, who has been breeding Golden Wyandottes for the past ten years, and has been winning at Chicago and many other smaller shows, during this time. His latest winnings at Chicago were as follows: Fifth cock, fourth cockerel, third pullet on four entries in a hot class, 66 birds competing. Mr. Pennington has been trap nesting his birds during this time, and has succeeded in establishing a 200 egg strain; at the same time has bred them close to the Standard, that he has been able to win in hot competition as referred to above.

He has some 200 birds on hand and is prepared to furnish you either birds for exhibition or breeding purposes, with quality to appeal to the most fastidious. Mr. Pennington guarantees every bird that he sends out to be exactly as represented, or they may be returned and money will be refunded, less express charges. You will find his ad appearing regularly in the American Poultry Journal.

SOME GOOD BUFF ORPINGTONS.

Near Linden, Mich., is situated the farm of John O. Willard, which for several years past has been devoted exclusively to Buff Orpingtons. There are over 200 acres of land in the farm, including an apple orchard of some fifteen acres. Here the stock is given full and free range, with the colony house system, and seldom is there a more thrifty lot of birds seen than to be found on the farm of Mr. Willard.

The writer spent the better part of a week here the last of November, during which time every Orpington on the farm was looked over and scored, aside from

some of the old stock which was not quite over the molt and the birds that had been selected out to be turned over to the market buyer.

Some of the most select quality ever handled was to be found here—hundreds of birds of even, clear, golden buff color, grand in size and of the correct, massive Orpington type.

Mr. Willard is adding satisfied customers to his trade every day, and it is not to be wondered at when a breeder strives as he does to give every buyer his money's worth or a little more.

Any one of our readers in want of either high class breeders or birds fit to show in any company should write for the special fall sales list that Mr. Willard is sending out at this time, and thus avail himself of some of the best Buff Orpington bargains in the country.

A. Didricksen, R. 1, Whitewater, Wis., the well known breeder of Rose and Single Comb Black Minorcas, made a fine exhibit at the great Chicago show last month and again his stock proved its superiority by winning the blue. Mr. Didricksen has been breeding Minorcas for the past fifteen years and his birds have always taken the ribbons wherever shown. At the present time he reports a nice lot of single comb cockerels, hens and pullets as well as some extra fine rose comb cocks and cockerels, which he will sell at moderate prices. His ad and a list of his late Chicago winnings will be found elsewhere in this issue. Our readers will do well to correspond with him and mention American Poultry Journal.

"The Harvester" strain of S. C. White Leghorns and Columbian Wyandottes is being advertised by H. A. D. Leggett, 20 Rowley street, Gouverneur, N. Y., in this issue. His birds recently won three firsts, one second, one third and eighteen specials at one of the large eastern shows. Write him for full particulars and men-American Poultry Journal.

Are you interested in White Orpingtons? If so, write to Mrs. J. W. Holton, Catasaqua, Pa., who has won at such shows as Philadelphia, Hagerstown, Allentown and Nazareth, and has exhibition and utility stock for sale.

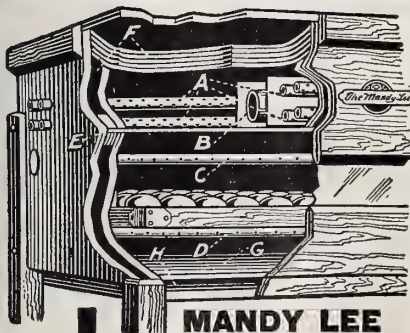

WHAT WILL POULTRYMEN DO ABOUT IT?

During 1909 producers all over the United States received for eggs an average price of more than twenty cents a dozen. The lowest average price was April 1st—sixteen and four-fifths cents per dozen. Besides, the average price for chickens was about eleven cents per pound. These figures are from Government statistics—not an estimate of an over-enthusiastic poultryman. They prove that poultry raising is a recognized industry, extremely and permanently profitable. It is a business requiring small investment. The demand for poultry

and eggs is growing from constantly increasing population, and there will always be a substantial profit-producing market. This opportunity is genuine, and comes to you. It is not made by market manipulations. The situation dictates (if not demands) that poultrymen increase their flocks—make the enterprise a real business enterprise. The situation is of a 1910 Mandy Lee incubator will be given a Mandy Lee Hygrometer. This outfit makes artificial hatching a scientific certainty. The eggs that go into your incubator are worth money, and, in justice to yourself, your hatching equipment should be the best that you can buy. Don't lose sight of the fact that Geo. H. Lee invented all for his own use—and uses them. They have made his poultry business a success. They do for others. They can do as much for you.

Geo. H. Lee wants to hear from you whether or not your plant can be increased this year. He has just written a book, Lee's "Chicken Talk," and his 1910 catalog is ready for distribution. He wants to send anyone interested a copy of each. BOTH FREE. In writing for these, do not hesitate to ask Mr. Lee's opinion or advice on anything where you think such would be of direct benefit to you. More than twenty years furnishes a ripe experience from which to draw, and he can render beneficial advice without obligating the inquirer in the least.

THE TIME IS NOW HERE TO THINK, PLAN AND ACT!

MANDY LEE INCUBATOR

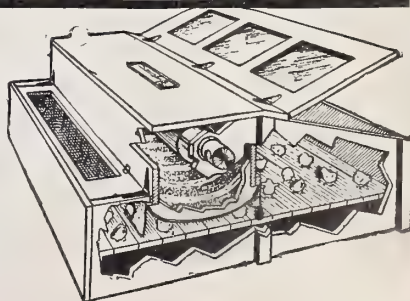

A—Perforated tubes, heating chamber. B—Inlet Pipe from heater. C—Upper ventilation, egg-chamber. D—Lower ventilation, egg-chamber. E—Air-tight diaphragm. F—Packing in walls and top. G—Chick-nursery bottom. H—Duck-nursery bottom.

THE MANDY LEE INCUBATOR FOR 1910

has our new moisture pan equipment which has withstood successfully the critical tests given it by Mr. Lee, and he now offers it, assuring customers that it has the real Lee merit. Each purchaser of a 1910 Mandy Lee incubator will be given a Mandy Lee Hygrometer. This outfit makes artificial hatching a scientific certainty. The eggs that go into your incubator are worth money, and, in justice to yourself, your hatching equipment should be the best that you can buy. Don't lose sight of the fact that Geo. H. Lee invented all for his own use—and uses them. They have made his poultry business a success. They do for others. They can do as much for you.

Mr. Lee wants you to know all about the Lee way of doing things and his inventions. Lee's "Chicken Talk," written by Geo. H. Lee, himself, is his latest book. It is free on request. With it we will send our 1910 catalog. From these two sources you can have a good understanding of what we want you to know and why we want you to know it. Write today. Both free by mail. Think, plan and act now.

GENERAL AGENTS in all principal cities.
Send for name of one nearest you.

MANDY LEE BROODER

is evenly heated throughout and neither lamp fumes nor super-heated air ever touch the chicks. The heat reaches the blanket in such a manner as to make over-heating impossible. A poultryman can afford to discard an impractical brooder and install a Mandy Lee. The extra chicks you raise will pay for it. No smoke, no gas, even heat everywhere, well-built, economical in every respect. Compare it with any make, anywhere. You want results. The Mandy Lee Brooder produces nothing else. It does what it is sold to do.

GEO. H. LEE CO., 1101 Harney Street, OMAHA, NEB.

**PLEASANT VIEW POULTRY FARM,
J. A. BICKERDIKE, PROP.,
MILLERSVILLE, ILL.**

Is pleasantly located one and one-half miles from Millersville, on a slight elevation. The farm consists of eighty acres, with a gradual slope to the south. At the highest point one has a grand view of the surrounding country. Mr. Bickerdike is a White Rock specialist, and being the inventor of the Superior Trap Nests, he has used nothing but these nests for several years, and pedigrees all his birds and sends a pedigree with each and every bird he ships, and his prices will be found to be no more for these pedigreed birds than you are paying for others. His flock at this time consists of some 600 head of fine White Rocks. He believes in the colony house plan, and has breeding yards, one-half acre runs and piano box colony coops in each. He mates up these fine pens every year, which are given the closest attention from both Mr. and Mrs. Bickerdike in collecting a pedigree of all eggs laid.

Besides these large breeding yards, the plan further consists of a cockerel breeding pen with coop and a one-acre range. The whole farm is well fenced and is divided into ten-acre fields, and each of the yards are so arranged that they can be given the freedom of some one of these ten-acre fields.

Mr. Bickerdike believes in having plenty of shade and has provided for this by planting a large number of catalpa trees. There are four colony houses which we found filled with pullets, one large breeding house in which we found some 150 old hens, also conditioning and feeding rooms in which were many pens containing all kinds of feed, oyster shell, grit, etc., etc.

The incubators are operated in the cellar of the residence and the chicks are cared for in outdoor brooders, which are used inside a long building. After leaving the brooders, the young stock is returned to the breeding yard, which produce it, until such a time as they are old enough to be banded and turned out into some of the colony coops. Mr. Bickerdike says he has found by paying particular attention to the laying quali-

ties of his strain, which he is able to judge by pedigreeing each bird, that he has succeeded in materially increasing the average egg production in that flock, and he has hens which have laid as high as 240 eggs in a year. Further says he has found his best layers have been his winners at the shows. His birds have been large winners in hot classes for many years past, but his most remarkable record was made this year at Illinois State Fair, where in competition with 156 birds of high quality, he won first, second and third cocks; first, second and third cockerels; first, second and third pullets; first, second and third hens; first, second and third pens. This exhibit was much admired by all White Rock breeders and attracted general attention, and should convince you of the quality to be found in Mr. Bickerdike's White Rocks. He also breeds a large flock of White Holland turkeys, on which he has won many prizes, and has made shipments of turkeys to England.

Mr. Bickerdike also has a large kennel of Collie dogs, which are all pedigreed, and, we understand, has some of the best blood lines to be found in this country. He has at this time several litters of puppies of different ages, which he will dispose of. He also pays some attention to the care of fruit and berries; in fact, his plant is an ideal poultry farm.

Mr. Bickerdike is an exclusive advertiser in the A. P. J. You will find his ad appearing regularly in our columns. His catalogue is free for the asking.

KEEPING POULTRY HEALTHY.

With ordinary prudent care in the matter of pure food and water and in promoting proper quarters and surroundings, poultry needs only something to tone up their systems, regulate the bowels and destroy any disease germs that are so liable to get into them. This something all fowls need occasionally from the small chick to the largest hen.

It does not matter how good your birds are, how fine and pretentious are their houses and yards; if they are not healthy you will derive neither pleasure or profit from them. The systems of fowls, like the systems of all living things, are liable to become disarranged, and it depends upon the character of the unnatural con-

dition, just to what extent they will be inefficient and unproductive. A sick or weakly fowl is worthless while in that state, and one that is not in the pink of condition is of little value to its owner.

There is nothing so good to place and keep the internal systems of poultry in perfect condition as Kemiform. Not only is it a splendid tonic, system regulator and health promoter, but is also the best known cure and preventive of nearly all dangerous diseases of poultry. It is the cheapest health insurance you can buy for your flock. A tablet placed in their drink occasionally will put your birds in a condition so you will admire them still more. When you see their healthy action, sparkling eyes, and fiery red combs you will realize that Kemiform is something all poultry men need to make profits possible. For further information turn to the Kemiform advertisement elsewhere.

INCREASING YOUR EGG CROP.

Every extra egg now is worth three in the spring, and you can double your present egg crop if you feed the fowl cut bone. Give each hen one-half ounce of green cut bone every day and you will find that she will commence laying more plentifully. Tests have proven that this feed will produce double the number of eggs secured by ordinary feeding in winter. Of course the bone must be cut right.

The Stearns Bone Cutter will cut bone, meat and gristle fine enough for bantams and chicks, without making splinters or chunks. It is fastest fine cutting and easiest fast cutting machine.

The Stearns Bone Cutter has a patented automatic feed which does perfect work. It is the strongest machine and will stand all kinds of hard usage.

E. C. Stearns & Co., who make the Stearns Bone Cutter, have prepared a very interesting booklet, "How to Make Poultry Pay," which we are sure they will send free to anyone who writes for it to Box 5, Syracuse, N. Y.

Chas. G. Pape, Ft. Wayne, Ind., exhibited some of his S. C. Black Minorcas at the late Chicago show and won the much coveted sweepstakes pen prize, besides several other prizes. His mating list is now ready. Write for one and mention American Poultry Journal.

Victor INCUBATORS AND BROODERS

will not warp and crack and leak nor "fall down" and waste your eggs, oil and time. They are built for service. We put a good, honest weight of copper into our boilers and tanks. Our doors fit and close tightly. Our regulator regulates. Our lamps burn clear and brightly. When you get the Victor you get machines that will hatch and raise chicks.

Just think of the waste to you if you buy a machine that is always 10 to 15 per cent short in its hatches.

The Difference in Profit from a Single Hatch May Pay the Difference in Cost

between an incubator of Victor quality and one of the cheap kind. You owe it to your own pocket to find out what our machines can do for you, before you purchase elsewhere.

Our catalogue "About Incubators" tells all the facts about lumber, copper tanks, lamps, burners, regulators, thermometers that you want to know. We are careful to tell the exact truth, because, with every machine we sell, we send a Bond under seal of our Company, agreeing to take it back and refund your money if it is not in every way as we said it would be. We have built up an enormous trade by honest and fair dealing.

Remember we pay freight. We do not ask you to pay cartage from our factory to our railroad station. Our prices mean delivered at your railroad station.

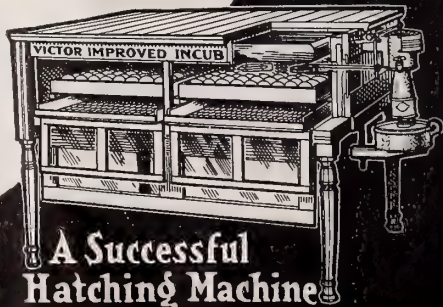

Get Our Prices Before You Purchase

Write us today before you forget it. Just say on a postal "Send 'About Incubators'" and we'll send it to you free.

GEORGE ERTEL CO., 102 Kentucky St., Quincy, Ill.
43 Years in Business Established 1867

ERTEL'S POULTRY

DIARY for use of poultry raisers in keeping account of expenses, eggs, chicks, and profits, proved so popular that we have made it a separate book. To pay part of the cost and postage we charge 10c a copy.

A Successful Hatching Machine

CHAS. A. CYPHERS AT THE HEAD OF A NEW INCUBATOR COMPANY.

His New Incubator Called the Buffalo,
Combining Quality with Low Price,
Creates a Big Stir.

A big stir is being made in the incubator manufacturing world by the announcement that Chas. A. Cyphers is putting a low-priced incubator on the market. In order to do this Mr. Cyphers, whose name has always stood for highest possible quality, found it necessary to build a new factory and equip it through-out with special machinery.

For nearly twenty years Mr. Cyphers has been a leading poultryman and incubator manufacturer. In all that time his name has stood for highest quality, and he has invariably refused to put out machines of inferior hatching qualities. His position on this point was well stated in a recent interview. In that Mr. Cyphers said: "I never could see the honesty of offering two grades. I think every incubator should represent the best effort of the manufacturer, and if the cheap machine did not do that, it should never be permitted to reach the market."

"On the other hand, if the cheaper machine is practically as good as the higher priced companion, it is pure dishonesty to charge any difference in price. I have said always that, when I can make at a low price as good a machine as has always been associated with my name, I will stop manufacturing the high-priced one."

"It has been apparent for some time that the only way to reduce existing costly methods was to make a complete change. That meant scrapping expensive machinery and starting anew from the ground up. That is exactly what I have done."

"For manufacturing my new Buffalo Incubator and Brooder, I have a new factory and new machinery of special design. Consequently, my new machine equals the high priced incubators always associated with my name, yet I can sell it profitably at about half their price."

No name among poultrymen is better known than Mr. Cyphers', and so it is not surprising that he is receiving inquiries by the thousands for catalogues. Our readers should write for these, addressing Mr. Cyphers at his new company, Buffalo Incubator Co., 4700 Ellicott Square, Buffalo, N. Y.

GETTING EGGS IN WINTER.

Why don't hens lay in winter? "It's agin natur," says the old fashioned man or woman who "keeps" chickens. The poultryman who makes his chickens keep him knows, however, that hens will lay in winter and lay regularly if fed egg making foods.

And, curiously enough, egg making foods are cheapest of all. Cut green bone, the best of all, costs almost nothing, because your butcher will generally give you all you need. Even if green bone costs you 5 or 10 cents, its food value for eggs is many times greater than grain, so that you actually reduce the poultry feeding cost.

The "trouble" of cutting green bone with such an easy machine as the Dandy Bone Cutter is no greater than preparing a mash. Any reader who is skeptical either of the egg making value of green bone or of the ease with which it is cut in a Dandy, may secure one of these cutters for free trial. In any event, every poultry feeder should write to the Stratton Manufacturing Company, Box 17, Erie, Pa., for a copy of the Dandy Poultry Book. It is sent free to our readers.

Chas. C. Coulter, proprietor Maywood Farm, Frankfort, Ind., breeds Rose Comb Rhode Island Reds of the highest quality. This farm consists of 150 acres and the young stock have free range, which insures their being strong, healthy and vigorous. Look up his ad in this issue and get into communication with him. He will give you fair treatment.

J. S. Pennington, Box A, Plainfield, Ill., the Golden Wyandotte breeder, made a phenomenal winning at St. Louis and Chicago the same week. He can furnish show birds or breeders. Don't overlook his ad in this issue.

Don't you want a nice canary? The U. S. Bird Store, Burlington, Iowa, can supply you and at a reasonable price. Write them now.

A 50 Egg BUCKEYE INCUBATOR

\$5

with lamp and complete outfit ready for hatching—guaranteed to hatch every hatchable egg. Our 50-Egg Buckeye is a simple, self-regulating, latest-improved machine. Hatching quality backed by a 40-day free trial or money back without dispute. 10,000 sold last season, on this guaranty, and not one returned. Larger sizes on same guaranty and at correspondingly low prices.

"Anybody can hatch Chickens with a Buckeye"

Twenty years on the market. 100,000 in successful operation. Every reader of this paper, who keeps chickens, should send for our poultry books telling how 51 chicks were hatched from 50 eggs, and "Making Money the Buckeye Way."

Buckeye Incubator Co., 1313 Innisfallen Ave., Springfield, Ohio

YOU OUGHT TO HEAR A WING PIANO

FOUR WEEKS'
FREE TRIAL
We Pay Freight Both Ways

A Beautiful Toned High-
Grade Piano on
Easy Payments

In 41 years we have built and sold over 40,000 WING PIANOS. All this experience goes into the WING PIANO of today, and makes it as high a grade Piano as you can buy. Thousands of customers yearly write us of the tone and durability of their WING PIANO.

Four Weeks' Free Trial. Some pianos sound well in the warerooms but are a disappointment in the home. WING PIANOS keep their purity and power anywhere; that is why we make the unusual offer of sending you one for 4 weeks on trial in your own home without payment or deposit. You can be the judge of it in the place in which it must be used. We pay freight both ways, if after a 4 weeks' trial you decide not to buy.

Agents' Profit for You

If the Piano pleases you and you decide to buy it, the price will be from \$75 to \$200 lower than any other high-grade Piano on the market. This is possible, because we sell direct to the consumer. We have no agents. We do not sell to dealers. The \$75 to \$200 lower price is just the cost of selling through middlemen. We give that to you, for to you it belongs.

2 to 3 Years to Pay

When paying for a WING PIANO we give you a choice of many different ways of paying for it. A way to meet every possible circumstance in life.

We sell for cash or on the easiest kind of easy payments. And show you how easy it is to do business with us at a distance. No collectors or solicitors.

WING & SON
NEW YORK
CONCERT GRAND

YOU OUGHT TO KNOW ALL ABOUT PIANOS

We have in press a magnificent 156-page "Book of Complete Information About Pianos." It will be the most complete and costly book ever published by any piano house. It is a complete encyclopedia of the piano, giving its history and telling about its construction. Shows how to tell a good piano from a bad one. Gives you a good start toward a musical education. Our price for the book is \$1, but by sending now for our other free book, "A Standard Piano," which ought to be in the hands of every music-lover, it will show you how to get the big book free when it comes from the printer. The book, "A Standard Piano," tells in detail the business methods of the old house of WING & SON. Why they send Pianos for free trial—why they can undersell local dealers, and how you can pay for a Piano and not know it.

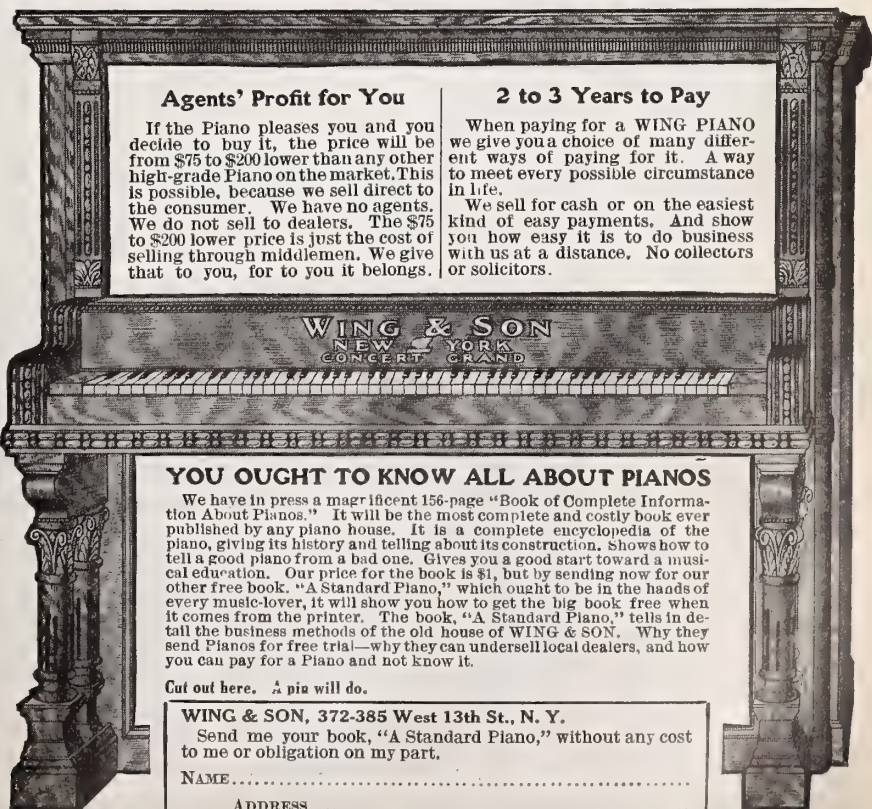

Cut out here. A pia will do.

WING & SON, 372-385 West 13th St., N. Y.

Send me your book, "A Standard Piano," without any cost to me or obligation on my part.

NAME.....

ADDRESS.....

**PARKSIDE POULTRY FARM, N. P.
EASLING, PEKIN, ILL., THE
GREAT WHITE LEGHORN
FARM OF THE WEST.**

Parkside Poultry Farm is located on a sandy ridge, just outside the city of Pekin, directly across the road from the city park. The view from the residence is very fine, the park having beautiful walks and drives and a very pretty little artificial lake. The main poultry building is very large, and in it is located a gasoline engine, feed mill and bone cutter for the grinding of all grains, and the cutting of bone fed to their large flock of White Leghorns. Here also is the incubator cellar, which has a capacity of 2,000 eggs. Adjoining this and in the same building is the brooder house, with a capacity of 1,000 chicks. The capacity of the entire plant is about 1,400 head of breeders and layers, and 10,000 chicks are hatched annually, many of which are shipped to supply the demand for day-old chicks, some 3,000 being raised each year to supply the ever increasing demand for "Parkside Superior Strain" of White Leghorns. The plant further consists of some 12 buildings, four of which are 14x100 feet and four 14x60 feet, these latter being divided into 10-foot pens and used as breeding yards; also 14 colony houses, which are located on the east side of the hill. At the time of our visit, we found some 2,000 birds, and every house was filled to overflowing. It was truly a beautiful sight to look over this plant, dotted all over with White Leghorns, having snow white plumage and pretty red combs, always alert and active.

Mr. Easling has paid particular attention to producing a strain having a great laying capacity, as originally he started an egg farm. However, he discovered that he was producing birds that filled the Standard requirements, so he commenced showing and has been winning ever since.

In one of the large buildings we found 150 cockerels. This was certainly a sight worth seeing, and we stopped to gaze at these beautiful birds for fully fifteen minutes before we were ready to proceed

further. Among this beautiful flock of cockerels, one could easily pick out birds fit to grace any show-room. They were indeed typical White Leghorns, having the much desired low tail carriage, and being extra fine in head points, with plumage as white as the driven snow. It was certainly a sight to please the eye of any White Leghorn fancier. Many of these birds were early hatched and are now fully matured; others were found in another building that were somewhat younger and will come along in time for the later shows.

Several of the other large houses were filled with pullets, those which were younger being separated in different houses in a different manner, that they may be fed properly. Particular attention is given to the feeding proposition of this plant that every bird may receive all it can eat without having been overfed. The flock was found in a perfectly healthy condition, and cleanliness prevails everywhere. Mr. Easling has always won the cream of prizes wherever he shows, and has many fine silver cups and taken several A. P. A. diplomas when in hot competition. His many prizes are too numerous to mention here, and we will confine ourselves to the Chicago show of 1908, where he won first, second, third, fourth and fifth cockerel; first, second, third and fifth pullet; also first pen; also silver cup for best display; no old birds shown. This and Mr. Easling's other winnings should convince the most skeptical that Mr. Easling is producing Leghorns which are up to Standard requirements and have the quality to win as well as the breeding in them, which makes them a noted laying strain.

He has won the cream of the prizes at Chicago for the last two years. His recent Chicago winnings, December 7 to 12, were as follows: First, second, third hen; first, second, third pullet; first, second third cock; second, third, fourth, fifth cockerel; first pen.

Mr. Easling line breeds his stock, and the above winners were all bred and raised by him, and these winnings should convince any one he has superior quality in S. C. White Leghorns.

He issues annually a very handsome catalogue, containing fine illustrations of

the prize winners and bird's eye views of his plant, and if interested in White Leghorns, we should advise you to send for it. It will be mailed you upon receipt of four cents in stamps. You will find his ad appearing in each issue of the A. P. J.

**CANFIELD & KING, PAINESVILLE,
OHIO, BREEDERS OF COLUM-
BIAN WYANDOTTES.**

One of our new advertisers, whose ad appears in this issue for the first time, is the firm of Canfield & King, Painesville, Ohio. They make a specialty of breeding high-class Columbian Wyandottes. While these gentlemen are new advertisers with us, they are not inexperienced breeders, having devoted twenty years to the breeding of fancy poultry, and they may justly claim to have had sufficient experience to know how to produce quality and how to feed a flock of birds to produce stamina and strong, vigorous fowls. They not only produce birds that go out and win for them but are able to supply their customers with winners for the leading shows and state fairs under the best judges. They have named their strain the "Can-King," which is noted for its vigorous, blocky type and snappy color, for its winning the silver cups, blue ribbons, diplomas, etc. They are now offering about 150 head of fine specimens, and can please you if you are in need of a Columbian Wyandotte. They are making special prices on cockerels this month, and you will do well to have your flock headed by a cockerel of the Can-King strain.

We refer you to their ad, which is to be found elsewhere in this issue.

Rickey's S. C. W. Leghorns made a remarkable winning at the late St. Louis show, and again proved their superiority. Write Chas. H. Rickey, Box A, Clarence, Mo., for full particulars, and mention American Poultry Journal.

For prize winning White Holland Turkeys write H. B. Cass, Buffalo Hart, Ill., and mention American Poultry Journal.

120-EGG METAL-COVERED INCUBATOR

Freight Prepaid

\$7.50

**Larger
Sizes at Equally
Attractive Prices**

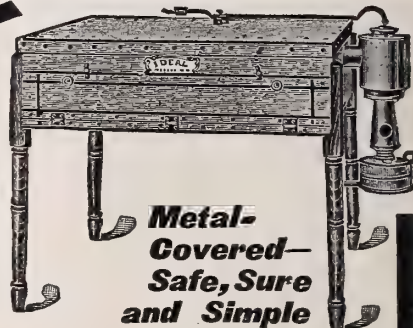

J. W. Miller

Delivered to your R. R. Station, complete, ready for hatching. No extras to buy. Metal-covered all 'round—front, back and sides, top and bottom. The safest built. The record of the Ideal speaks for its quality. No other incubator has given such universal satisfaction among the experienced and inexperienced alike. Made of the best materials; three thicknesses of wall and dead air space. MADE RIGHT in every way, and sold direct, freight prepaid, at a price no other manufacturer could produce it for. Our big, helpful free book tells why—

IDEAL Incubators and Brooders

are hatching and raising chicks for thousands who have failed with other machines. Because more simple, absolutely self-regulating and self-ventilating. Delivered free east of Missouri River and north of Tennessee. If you live beyond these lines, write for delivered price. Write for Free Book—"Poultry For Profit" No book will put you so far on the road to success with poultry. Full of dollar-making hints and money-saving prices. Illustrates and describes complete Ideal line of poultry supplies and thoroughbred fowls. Write at once for your free copy.

**Why Poultry
Pays,
and
How to
Make It Pay.**

PUBLISHED BY
AMERICAN POULTRY JOURNAL,
338 Dearborn Street,
CHICAGO, ILL.

WHY POULTRY PAYS AND HOW TO MAKE IT PAY

A book for the beginner in poultry raising and for those engaged in it who are interested in securing from the business the greatest profit obtainable. This book tells you how to start right, how to succeed with poultry, how to line breed, how to win at the shows, how to breed and prepare fowls for market, how to feed for the production of eggs. Also contains a chapter on Poultry Diseases and simple remedies for same. Gives instructions on incubators and brooders and much other valuable information, and is profusely illustrated with ideal drawings of Standard fowls.

We are selling this book at the popular price of **50 cents**. This book and one year's subscription to American Poultry Journal for only **75 cents**. Send all orders to

AMERICAN POULTRY JOURNAL PUB. CO.
358 DEARBORN STREET - - CHICAGO, ILLINOIS

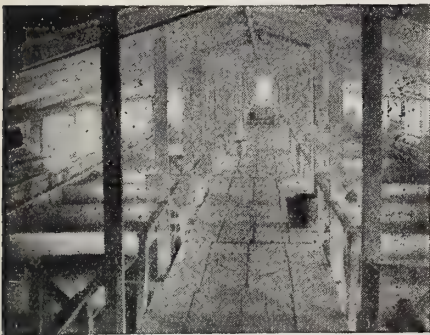

THE INCUBATOR THAT USES THE HEN.

Most of our readers have heard of the incubator that uses the hen. So far as we know there is but one patented incubator of that kind. The honor belongs to the Natural Hen Incubator, which was invented and patented by Johan F. Siems, an eminent German poultry specialist, formerly of Columbus, Neb., but now of Los Angeles, Cal.

This Natural Hen Incubator is a wonderful invention. The hen is everything in it. She furnishes the heat, ventilates and regulates. There is no lamp and, therefore, no deadly fumes to kill the chicks in the shell, no overheating, no expense for oil, no danger of fire, no thermostat or artificial regulators. Best of all, the results are claimed to excel those of any other incubator on the market.

The invention has government sanction. It carries two United States patents and is also patented in foreign countries. It is used by a host of poultry people. Last year the number was said to exceed 500,000. That the users think the Natural Hen Incubator way is the only way may be gathered from what they say. Here are a few enthusiastic extracts from letters sent us by Mr. Siems, of the Natural Hen Incubator Company.

One says: "Would not be without it for \$25." A lady says: "Would not be without it at any price. Want to keep it, considering the trouble I have had with setting hens before." Another writes: "Worth five times its cost." Another: "The most common sense natural hen incubator that could be gotten up; worth fully \$10 to \$20." Still another writes: "Would not take \$10 for the use of it

BROODER HOUSE ON RANCOCAS FARM, BROWN'S-MILL-IN-THE-PINES, N. J.

this season." Another lady writes: "I never had anything on the farm that gave me so much pleasure," etc., etc.

The Natural Hen Incubator costs but \$3 for a 200-egg hatcher. This, as will be seen, is a wonderful saving on the price of other incubators. Both price and results indicate that the Siems plan of hatching should be investigated. A letter to Natural Hen Incubator Company, at 1349 Constance street, Dept. 4, Los Angeles, Cal., will put you in touch with the company and their plan. We advise writing to the company. Before doing so read their advertisement on another page of this paper.

Elsewhere in this issue will be found the ad of the Crystal Spring Farm, Snively Bros., proprietors, C. E. Snively, manager. 1910 will be this farm's third year of business, and they have issued their first annual catalogue, which contains illustrations of the various fowls which they are breeding. In speaking of their stock they state that they have spared neither time or money to secure the best possible stock, and their birds will compare with the best, both for utility and fancy. They are amply prepared for shipping either stock, eggs for hatching or baby chicks. They also manufacture a lice powder guaranteed to do its work in good shape or your money refunded. Do you want a catalogue? If so you should write to Crystal Spring Farm, R. R. 5, Lititz, Pa., not forgetting to mention American Poultry Journal.

Silver Laced Wyandottes, Houdans and Indian Runner ducks are the varieties bred by Blue Bell Farm, Glenview, Ill. They made a fine exhibit at the late Chicago show and won many premiums. Their stock has been bred in line for thirty years. Write for circular and mention American Poultry Journal.

Poultry Books

Your Choice of Any Poultry Book Listed Below is Given Free For Subscriptions

A 25-cent book for 1 subscription. A 50-cent book for 2 subscriptions. A 75-cent book for 3 subscriptions. A \$1 book for 4 subscriptions. A \$1.50 book for 6 subscriptions.

WINNING WHITE WYANDOTTES LAYING

In cocks, hens, cockerels and pullets I offer choice specimens with deep round breasts, broad backs, well spread tails and snow-white plumage. Birds which will lay eggs and win ribbons for you. All farm raised, healthy, vigorous stock. Write at once telling just what you need. **Harry W. Britton, R. F. D., Moorestown, N. J.**

Fanciers' Association of Ind.

Will Hold Their Tenth Annual Show at Indianapolis, February 7 to 11, 1910

☐The quality show of the west. ☐A combination show of poultry, dogs, cats and pigeons. ☐Big cash specials, nearly 100 silver cups, and a long line of club ribbons. ☐Send for list to secretary. Address

C. R. Milhous : : Indianapolis, Ind.

Multiply Your Egg Income By FIVE!

Multiply your egg income by FIVE. You can do this and, to learn how, you do not need to be in the market to buy anything. Simply tell me without delay that you raise chickens and I will present you, free, with my compliments, my comprehensive Manual of Poultry Facts and Secrets, just published—**"Making the Golden Egg."**

This Book explains the HUMPHREY WAY and tells how to make hens lay all winter.

How to get 150 to 250 eggs a year a hen—how to get the finest egg-making food right in your own home town for almost nothing—how to start lazy hens laying—how to get eggs for early setting—how to get fertile eggs—how to raise chickens for the March market—how to shorten the moulting period—how to feed fresh cut bone—how to multiply your poultry income by five.

"I can make your hens lay more eggs this winter than they ever laid in summer."

Man wrote me recently that, by the HUMPHREY WAY, he averaged 50 eggs a day all winter from 70 hens, often getting 58 in one day. He considered that a remarkable record, but it was no better than *anyone* should expect who knows and follows the HUMPHREY WAY.

If you have 10 or more hens it will pay you well to learn the HUMPHREY WAY, to know which costs only a cent.

Rush your name in by postal for **"Making the Golden Egg"**—FREE. You can multiply by five the winter value of every hen on your place. Write me.

HUMPHREY

White Street Factory, Joliet, Ill.

I made the Humphrey Bone Cutter, the Humphrey Clover Cutter, the Humphrey Brooder—the brooder that saves chick life—the Humphrey Grit Crusher, the Humphrey Corn Sheller, the Humphrey Dry Bone Mill and other Poultry helps. Please advise me if you are interested in these.

POULTRY HERALD

Has it

If it's worth knowing you'll find it in **Poultry Herald** (every issue copy-righted) edited by experienced poultrymen only, published monthly, 22 years old, full of illustrations, 30 cents a year. Each month it tells just what you want to know then—about fowls, chicks, turkeys, ducks, geese, diseases, poultry shows, houses, coops, answers questions free, etc. You can't go wrong if you read it. We want you to try it and we'll send **FREE** with your subscription, at the regular price of the paper, one (your choice) of these necessary poultry books: **"Poultry Manual,"** all about the breeds, etc.—**"Poultry Houses, Coops, etc."** (50 plans)—**"Simple Poultry Remedies"**—**"Egg Money, How to Increase It"**—**"Chicks, Hatching and Rearing"**—**"Turkeys, Ducks and Geese."** Address **POULTRY HERALD, Dep't C, ST. PAUL, MINN.**

Greider's Poultry Book

Better, Bigger than ever

Everyone interested in poultry—the man with a big poultry farm as well as the man with a few hens—should have Greider's Poultry Book. It contains 200 pages of just the kind of information you need, 30 handsome colored plates showing pure-bred stock. The book is full of practical help, gained through actual experience on the largest poultry farm in Pennsylvania. Write for it today. Price, 10 cents.

B. H. GREIDER, Box 101, Rheems, Pa.

THIS BOOK tells how and where to buy stock, eggs, incubators and supplies at reasonable prices. Don't miss this chance.

CLASSIFIED ADS

UNDER this heading ads will be inserted for six cents per word each month for less than three months and four cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of fifty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J.

ALL COPY FOR CLASSIFIED ADS MUST REACH US BY THE 19th OF THE MONTH PRECEDING DATE OF ISSUE

Easy to Read---Stays On

After trying various others, Breeders, Judges and Poultrymen unanimously declare

THE "CONVENIENT" LEG BAND

—the best and most satisfactory they have ever seen. Made of Aluminum—sizes for all breeds, raised figures, quickly put on and won't lose off. The only Bands that are bent ready for use. 12 bands for 20c; 30 for 45c; 60 for 75c; 100 for \$1.00. Sample free.

H. O. SHAW, Box 103, Grinnell, Iowa

Blanchard's White Leghorns

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled as foundation stock or for introducing new blood. Stock for sale, both old and young. Illustrated circular free.

WINNERS AT MADISON SQUARE GARDEN, N. Y., 1903-1904-1905-1906-1907

A. M. SHAW

SUCCESSOR TO H. J. BLANCHARD

Box 997, GROTON, N. Y.

YOUR HENS WILL PAY BIG PROFIT

Keep only your laying hens! Your non-layers, barren hens, drones, etc., eat up the layers' profits faster than the useful hens make those profits by steady egg laying. You must get rid of the hens which can't pay their own board bills, to say nothing of egg profits.

But, of course, you don't want to kill a hen that, though it is a non-layer now, still possesses egg-laying qualifications. How are you going to tell whether the hen will ever lay again?

That's just what the **Potter System** teaches in ten minutes. You'll quickly know how to tell the absolutely eggless hens in your flock. You take the non-layers away, keeping only the hens that pay profit. Then you sell the non-layers to market—more profit.

Thousands of poultry keepers and farmers are making their flocks pay big because they are using the **Potter System**. Their success is yours, too. Send us that coupon in the lower right hand corner and enclose two red stamps for postage.

"Don't Kill the Laying Hen"

Reveals the simple way of making money by eliminating non-laying hens from your flock. The method of telling whether a hen will ever lay another egg is laid bare.

Our Book Tells You

- 1st—How to avoid killing the hen that is laying.
- 2d—How to pick out the hen that is not laying.
- 3d—To know about how far advanced the hen is toward the laying point.
- 4th—How to avoid wintering hens that are not likely to be good winter layers.
- 5th—To know how to select the hen having strong laying powers for breeding purposes.
- 6th—How to know the hen that has entirely lost her power of egg production.
- 7th—To know how to sort out the hens in summer or fall that have ceased laying.
- 8th—How to know the hen that has become weakened in her laying powers.
- 9th—To know how to buy hens in the early winter that will make good winter layers, and dispose of them at a large profit after receiving their crop of eggs.
- 10th—How a very close estimate of the number of eggs the hen lays in a week or month may be made without the use of trap nests.
- 11th—How overfeeding before egg development has started tends to reduce the egg production.
- 12th—How, when and why the laying hen should be educated.
- 13th—How to arouse and stimulate the laying organs of the hen.
- 14th—How to know the pullets that will make, and are, strong layers.
- 15th—Roup, and how it affects the laying organs of the hen.

This Splendid House, Only \$40

This Potter Portable Sanitary Poultry House, shown here, is eight feet by ten feet in size, completely equipped with two Potter Hennerly Outfits, six nests, etc., two pens, room for fifteen to eighteen hens each. It is complete, convenient, sanitary, neat and attractive. If in need of a house of this style and size, you can't beat it for \$40.00. The house shown here is but one of the dozen different styles and sizes which we make. We recently bought out the business of the Sanitary House Company of Lemont, Illinois, and now manufacture the complete line of Portable (K. D.) Poultry Houses, Broods, Coops, Pigeon Lofts, etc., formerly made by them. If you want a complete up-to-date and cheap house we can supply it. Large 100-page catalog fully describing our houses, fixtures and supplies will be sent.

M. J. COREY, 900 SUMMER AVE., SPRINGFIELD, MASSACHUSETTS

POULTRY QUEEN FOUNTAIN

will keep water warm in winter without fire, therefore will not freeze. It will keep water pure and fresh until used. As the fowls drink from the cup the water flows automatically from the reservoir. It is impossible for dirt to get into the water. Where the production of winter eggs is desired this fountain is indispensable. As a labor saver it pays for itself in a short time. In watering young chicks you don't have to carry water every day. By replenishing the water once a week the water will be clean and pure.

Bryan Manufacturing Co. Inventors and Manufacturers Cadiz, Ohio

White Plymouth Rocks

Are you interested in a bird to win for you? Or in need of a good breeder that will produce you some winners? If you are interested, send where you can get the best value for your money. All transactions guaranteed satisfactory.

L. C. Bonfoey Box H Vernon, Conn.

BOOK ON ORPINGTONS

Send 10 cents today for club book! Tells why Blacks are best of Orpingtons. The favorite of all who breed the three varieties together. Tells of Australian Government proof of laying supremacy--most rapidly maturing fowl--largest per cent of white meat--largest and most beautiful of Orpingtons.

Milton Brown, Secretary, Cheviot Poultry Farms, Cincinnati, Ohio

Ricksecker's S. C. R. I. Reds

Red? Yes, red inside and outside. The Reds that win in shape and color. At American Royal Stock Show, Kansas City, October, 1909, won 1st, 2d and 3d cockerel; 1st, 2d and 3d pullet; 1st and 2d cock; 1st and 3d hen; 1st and 2d pen. Every first and every second but one. At Kansas State Fair Show, won 1st and 2d cockerel; 1st cock; 1st and 2d pullet; 1st, 2d and 3d hen; 1st and 2d pen and 1st sweepstake cockerel over entire American class. Every first again. At Missouri Valley Inter-State Fair, Kansas City, 1909, won seven premiums on eight entries. We have furnished many first prize winners to customers this fall. If you want winners, buy eggs from the stock that produces winners. Big, strong, vigorous, Western bred birds, fit to show anywhere. All stock sold. Egg circular and mating list now ready, it's free.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winters of 1908 and 1909

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection, and created a Sensation as the Finished Achievement in Modern Barred Rock Breeding.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My clean sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show

36 First and Special Prizes at BOSTON and NEW YORK 1907.

Champions Again at the Greatest Show in the Land : At the Big 1910 Madison Square Garden Show

SHEPPARD'S FAMOUS ANCONAS

THE
WORLD'S
BEST

demonstrated their quality again by winning four first prizes and three second prizes in a very large class of strong birds. Since entering the great race at N. Y. City my birds have won three times as many 1st and 2d prizes as all the other Ancona breeders together. A flock of Sheppard's Famous Anconas have layed in one year the wonderful average of 256 eggs for each hen. They have distinguished themselves as egg producers as well as in the show room. Orders for eggs booked now. Send your orders early to insure prompt shipment. Circ. free on request.

H. Cecil Sheppard : IMPORTER EXPORTER BREEDER
President International Ancona Club : Box M, Berea, Ohio

MISHLER'S ROSE COMB BLACK MINORCAS

MADE A CLEAN SWEEP OF ALL
FIRST PRIZES AT CHICAGO, 1909

in the strongest class of this variety ever brought out, and besides ALL FIRST PRIZES we won 2d, 4th and 5th cocks, 3d and 5th hens, 2d and 3d kcls., 4th pullet and 2d and 3d pens. This in a class of 69 birds and in competition with nine other breeders, places the Mishler strain at the top. No more females for sale. We have about 30 fine kcls. sired by our Chicago winners. Let me know about what priced birds you want and I can give you individual descriptions of males I can sell at that price. We have 15 pens mated for the egg trade. The finest Minorca catalogue ever issued, giving illustrations and descriptions of my breeding pens, will be mailed for two red stamps. Why not get a start?

LLOYD C. MISHLER R. R. 1 NORTH MANCHESTER, IND.

ORPINGTONS

Our 1st prize pen at Cincinnati show was the greatest sensation in Orpington history. All judges agreed they had seen nothing equal to it. Hens weighing 12 lbs., of magnificent, even, soft Buff; clear wings and tails. Note the photograph of our Buff hen, Buff Enchantress. A winner at Crystal Palace. This photograph is not retouched! We are not afraid to say "Ask the Judge." Judges Pierce and Loring Brown judged at Cincinnati—ask them; also Judge Ewald. No expert ever saw our Buffs who did not declare them the most wonderful in the world, in size, type and color. Our Cincinnati 1st prize pen was headed by a ckl. we raised ourselves. A bird of great size, wonderful type and sensational color; perfect wing and tail, eye, comb and under-color. We will return these birds to breeding yard at once, as we are hatching these eggs all the year. We are now booking orders for January and February eggs. If you want sensational type and size, don't delay. Bargain sale of utility pens at \$15 up, in Blacks and Buffs. We claim that our Buffs and Whites are equal to our wonderful Blacks. Free catalogue.

CHEVIOT POULTRY FARMS - CINCINNATI, OHIO

ORPINGTONS

J. M. WILLIAMS & CO., Box B, North Adams, Mich.

World's Foremost White Wyandottes

have won for me the highest honors at the leading shows of America. I have sold more prominent winners for the best shows in America than any other breeder from Atlantic to the Pacific, Canada to Texas, past winter more than ever; every bird I sold for winner proved a winner. All stock returned at my expense if not satisfactory. Write me.

J. H. Jackson Lock Box 88 Hudson, Massachusetts

Do you want to prevent stomach and bowel troubles in your yards? Then use

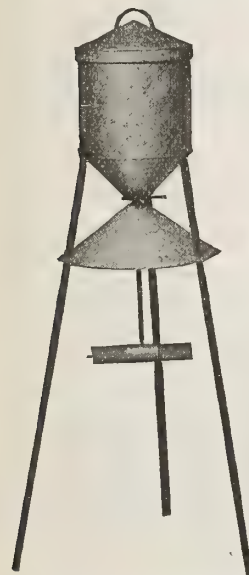

The Norwich Automatic Exerciser and Feeder

Feed delivered is always fresh and clean. Necessitates slow feeding and makes the flock work for its living. You will never see your hens roosting on dust boxes or roost all drawn up, if you use the Norwich Automatic Exerciser and Feeder; they will all be on their feet hustling, and the exercise makes them lay. Every one gets its share of feed, the weaker as well as the stronger, and the use of the machine will positively bring up the vitality of the flock.

Guaranteed absolutely rat and bird proof, and to save 20 per cent on feed bills, or money and expenses refunded.

It will cost you nothing to prove our claims. Write us—it will pay you.

Norwich Automatic Feeder Company
20 Water Street Norwich, Conn.

1908-1909 Madison Square Garden Winner. On Buffs we won first and third cockerels, second and third pullets, fourth hen, fifth cock, silver cup for best cockerel, silver cup for best collection. Showed nine birds winning silver cup with 7 points more than any other breeder. On Whites at Cleveland 1908, first cock, first cockerel, first hen, first pullet. S. C. Blacks all sold.

CIRCULAR FREE

Buff Leghorns

**Successful Egg Farming**

Among people who can afford luxuries there is great demand for a regular supply of fresh eggs. The few growers who can furnish them regularly, Winter and Summer alike, get very high prices.

The Corning Egg-Book

(entitled "\$6.41 per Hen per Year"), tells how two men, in poor health, starting four years ago with only thirty hens, made from their little egg-farm a clear profit of over \$12,000 last year. It tells all about their experience, their failures, their methods and how others men or women, with good sense, care and faithful work can make money in the same way. Not a detail left out.

The Corning Egg-Book is sold in combination with the Farm Journal, Philadelphia, Pa., and we have made arrangements to make this

Special Offer

For \$1.00 (cash, money order or check) we will send postpaid the Corning Egg-Book and the Farm Journal for two years, and American Poultry Advocate 2 years, all for \$1 if order is sent at once to

American Poultry Advocate

727 Hogan Block, Syracuse, New York

Golden Wyandottes

Just look at the record the Simmons Golden's of Quality have made so far this season:

**The Best and Most
Lasting Covering Made!**

Proven by 60 years actual experience — from every standpoint the most economical covering you can use.

SUPERIOR TO SHINGLES!

Special Offer to Readers of American Poul. Jnl.

Fill in carefully coupon below. Mail it to the Chicago House Wrecking Co., Chicago, at once. We will send you, free of all cost, samples of the very best roofing, ceiling and siding made. These samples are large and generous enough to give an idea of the quality of the large sheets from which they are taken. Or drop a postal saying, "Send free samples of Galvanized Iron Coverings as advertised in American Poul. Jnl." Sign your name and address, carefully, in full. These samples are absolutely free. Send no money or postage. Our galvanized rust proof iron (see No. 1) is made of the very best grade of specially manufactured iron sheets. The galvanizing process protects these sheets from rust for all time. This thorough coat of non-corrosive metals—tin, lead and zinc—called spelter, is made a part of each sheet through the special dipping process employed. This gives the heaviest possible coat of galvanizing necessary for any covering purpose. Galvanized iron roofing has been used for over 60 years. It has always been and is today the best material for covering buildings made. Keeps buildings warmer in winter and cooler in summer. Positively does not taint your rain water—is never injured by contraction or expansion.

Many fires originate on shingle roofs. The natural life of a shingle is less than ten years, besides requiring constant attention. The quality of shingles grows poorer each year.

Excels Ready Roofings in Every Way!

Compared to ready roofing, whether rubber surface or felt, cost considered, metal roofing will outlast it 8 to 1. Patent, prepared or composition roofings crack and curl with age. Tar roofings rot and spoil. Most ready roofings soften in the warm air and sun. They stick to your feet when walked upon.

Better than Slate. Slate weighs seven times as much and will break from freezing and thawing.

Suitable for Farm Houses, Barns, Stores, City Dwellings, Poultry Houses, etc.

Galvanizing is the life of a metal roof. Our light weight sheets with their heavy galvanizing give better service, besides saving considerable in freight. Do not require painting. Have a mottled, sparkling effect, pleasing to the eye.

Anyone can lay our galvanized rust proof coverings. Ordinary hatchet or hammer are the only tools needed. No experience required.

Illustration No. 1 is Corrugated (galvanized rust proof iron), an all around covering. It is the best. Suitable for ceiling, siding or roofing. Corrugation 1½ inches apart—one inch closer than others. Makes a firmer and better looking sheet.

Illustration No. 2 shows the "V" Crimped Roofing (galvanized rust proof iron) suitable for roofing only—makes a splendid watertight roof—requires "V" sticks to put on.

Illustration No. 3 shows Standing Seam Roofing (galvanized rust proof iron), requiring set of tools furnished at low price. Makes first-class covering for any kind of a building.

Illustration No. 4 shows Plain Flat Sheets (galvanized rust proof iron), suitable for many special purposes, such as lining, ceiling, roofing sheds and buildings and innumerable purposes independent of roofing, siding or ceiling. It can be soldered.

Illustration No. 5—Beaded Ceiling or Siding (galvanized rust proof iron) makes a handsome ceiling or siding. Easy to apply—suitable for stores, etc.

Illustration No. 6—Brick Siding (galvanized rust proof iron), an exact imitation of regular brick—most suitable exterior for buildings of any kind. Easy to apply, requiring only nails and hammer.

**GALVANIZED RUST
PROOF IRON**

(No. 5 BEADED CEILING OR SIDING)

**GALVANIZED RUST
PROOF IRON**

(No. 6 BRICK SIDING)

\$1.60 to \$3.25 PER SQUARE!

Our Galvanized Rust Proof Iron Coverings

These six galvanized rust proof iron coverings come in sheets all 6 feet long. Can supply sheets 2, 3 and 4 feet long. Flat sheets are 26 inches wide. All others 24 inches wide, sold by the square of 100 square feet, not including lap. Prices as follows:

Flat, per square \$3.00
Corrugated and all other designs, per sq. . . 3.25

When ordering mention lot No. 18

Our Semi-Hardened Steel Roofing (Not galvanized)

In addition to this galvanized iron, we have a plain light-weight steel roofing of superior quality. It is good for several purposes and can be painted after it is on the roof. Sheets when flat are 24 in. wide and either 6 or 8 ft. long. All other patterns, except the brick siding, are 22 in. wide and either 6 or 8 ft. long. Furnished either painted or unpainted. Prices as follows:

Flat, per square \$1.60
Corrugated and all other designs, per square, 1.85

When ordering mention lot No. 10.

SPECIAL FREIGHT PREPAID OFFER!

At above prices we'll prepay freight in full to all points east of Colorado in the U.S., except Oklahoma and Texas. 15c per sq. additional for these two states. To all points west of Colorado in the U.S., 50c per sq. additional.

Why I Can Sell the Best Incubator on Earth For Less Than \$10 and Pay the Freight

M. M. Johnson, Incubator Man.

I KNOW my competitors wonder how I do it—and I know many of my customers wonder that I can make such an elegant machine for the price I ask for it.

I'm going to tell the reason why right in this paper.

It is because I make and sell so many of them.

If I only made half the number of machines that I do, I'd have to have anywhere from twelve to fifteen dollars for them—because my overhead expense on half the number that I'm now making would be just as great as it is on double the amount.

Now, I make over 50,000 incubators a year—and I give my customers all the advantage of the saving I make on this big volume.

This is a good many thousand more Incubators and Brooders than any other manufacturer in the world

ever made in a year—so they **have** to charge the **long price** to even up on their big overhead expense.

I give the benefit to all my customers. I only want a small profit on each machine—because I can afford to be satisfied with that on account of the immense number of them I sell.

If I could make 100,000 machines instead of 50,000 a year, I'd make the price still lower.

I figure my profits at just 8%—some people call me "8% Johnson—The Old Trusty Incubator Man."

8% is all I want for my profit. Anybody making half as many Incubators as I do would have to have 16% profit—and in a good many cases considerably more.

Old Trusty Incubators are hatching chickens all over the civilized world—over 4,000 of them right here in my home country.

You see, my machine is just as popular right near home as it is anywhere else. Many other manufacturers can't say that.

First, the case is made of finest California redwood—dry as powder—then it's covered with expensive, high-grade asbestos board of first quality—heat-proof—and then, again, the case is covered with handsome, mottled sheet-metal—and there you are—the finest Incubator you ever heard of—good for a lifetime—absolutely safe under all conditions—the most perfectly insulated Incubator possible to make—runs steadily on half the oil—and so simple in operation that a child understands it at a glance. Now, wouldn't you like to try one of my 8%-profit incubators?

8% means less than 80 cents profit on each machine I sell. Making them in such enormous lots, I can make them much cheaper than anybody else—and my customers get the benefit.

Wouldn't You Like To Try An Old Trusty For 30, 60 or 90 Days At My Risk?

I haven't any inside rate with the railroad or express companies—but I pay the freight on every machine I sell just the same—so that doesn't need to worry you.

When I quote you my less-than-\$10.00 price, you know exactly how much my machine is going to cost you right at your own railroad station.

If, after you've used it for a month—or two months—or three months **you don't like it**—you can send it back—I'll pay the return charges and the test won't cost you a penny.

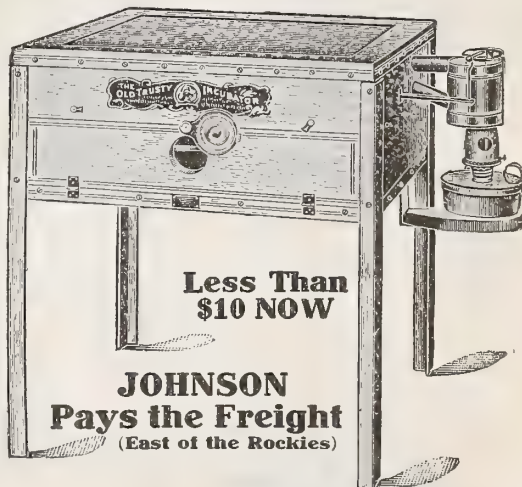

While my **price** is low, my quality is always high. You couldn't get a better incubator than Old Trusty if you paid \$30.00 for it. Sometimes people think that my price is so low that my machine can't be any good—but when I send it to them **on trial**, they always **keep it** and write back to me that they wonder how I can give such a value for the money. Just remember this—

I'm not a "new beginner." I've made more Incubators and Brooders than any three men in the world. I've sold them **all** on this Free Trial Plan—and I'm going to keep on making and selling more Brooders and Incubators than anybody else because my trade is increasing every day.

Want **you** let me send you my book? It's written in just the plain language of the man who makes and sells the machines, without any fine or fancy writing—but it tells just the things you want to know about Incubators and Brooders and about how to make money with the Old Trusty. Thousands and thousands of people all over the country are making big money in the chicken business because the Old Trusty Incubator is certain and sure.

Write for my Big Book today—and find out all about me and my Incubators and my 150,000 satisfied customers and friends before you order. Write me a postal today and I'll write you personally and tell you my price to you and send you the Big Poultry Book Free.

Roup Cured

A Remarkable Cure

Dix, Ill., Dec. 1, '09.
I recommend Kemiform as the best remedy for roup I have ever tried. Had hens with head and eyes swelled shut and only two applications cured them sound and well. Shall keep it always on hand. (signed) W. I. Pfau.

The above statement is one of the many we are receiving. Isn't that the remedy you want? No need of waiting a month for recovery with

KEMIFORM

It is truly the remedy of many uses because of its safe and speedy action in curing or preventing such fatal diseases as Cholera, Chicken Pox, Limberneck, Liver Troubles, etc. A Southern lady writes that Kemiform

Saved 200 Chicks

from deathly diarrhoea, and it has done the same for others. A Kemiform tablet dissolved in the fowls' drink occasionally will put the whole flock in a healthy, profitable condition. One box of tablets makes 25 gallons of sparkling Kemiform liquid, which fowls like. Results Guaranteed. Price 40c and 15 leg bands free. Sample for stamp and name of your dealer. Address

The Kemiform Co., 2451 St. Clair St., Cleveland, O.

A Treatise on Food and Egg Production

A valuable book for anyone who is raising fowls for egg production. It gives in a very plain and concise form the composition of the different foods.

It tells how and what to feed to produce eggs in winter.

The author, has sent this book on approval and has always received the money for same at once, which is proof that the book is valuable.

By special arrangement with the publisher we are offering this book and one year's subscription to American Poultry Journal for only \$1.00. Send all orders to

American Poultry Journal Pub. Co., 358 Dearborn St., Chicago

Twelve Months' Work in the Poultry Yard

By W. Theo. Wittman, Acknowledged by All to be One of America's Foremost Authorities and Judges

Starts you in January, and take you clear through the year—telling you just what to do to successfully handle your fowls in the safest and most economical way that is consistent with good business methods, to make the largest success possible with your fowls.

It doesn't tell you how to make two hundred dollars from twenty hens

but it gives you a short, boiled down, and up-to-date treatise on lines that are practical and can be executed with safety. The contents of this book are intensely practicable, and teach a method of poultry keeping exactly opposite to that which is complicated and unnecessary. **Price 25 cents.**

THE POULTRY ITEM

The largest Eastern poultry Journal, published at Sellersville, Pa., 68 to 140 pages monthly. Special breed numbers starts in September and continue until May, 1910. Tells you how to secure larger and more profitable returns from your chickens. Extremely helpful and valuable. Get a-going right in the poultry business. Many are making \$2.00 per hen each year. Are you? The Poultry Item will keep you posted on latest methods and poultry secrets. The Item stops when time is up. **Price 50 cents the year.** Order it now at the following special terms.

A Year's Subscription to The Poultry Item and 50c Twelve Months' Work in the Poultry Yard, only

FREE! ORIGIN AND HISTORY of All BREEDS OF POULTRY

THE greatest book on poultry ever published, contains sixty-five pages of reading matter, size 9x12 inches, also contains illustrations of 198 different fowls in their natural colors, painted from life. Regular price \$1.00. It has taken years to complete the drawings for this book. It is something never before attempted by any publication, not even the Standard of Perfection contains pictures of fowls in colors.

This book is being sold for \$1.00 every day, but we want every poultryman to have one, as it is the grandest piece of work ever accomplished in poultry literature and is a living ad for its publishers—American Poultry Journal Publishing Co. To accomplish our object and get a copy of this book into the hands of every poultry fancier, we will give one copy FREE for the first six subscriptions to American Poultry Journal you send us at one-half our regular subscription price.

Send us six subscriptions to American Poultry Journal together with \$1.50 and we will send you, postpaid, a copy of the Origin and History of All Breeds of Poultry.

BUT THIS IS NOT ALL

You can take subscriptions at any price from 25 to 50 cents and keep everything above 25 cents as your commission. For the first six subscriptions you send us you will receive a copy of the Origin and History of All Breeds of Poultry as per offer above and these subscriptions will count on the grand prizes listed below as well as any other subscriptions you send us.

Do not fail to read this list carefully as the prizes are well worth your time and trouble and will many times repay your efforts to secure the subscriptions for us.

LIST OF GRAND PRIZES

First Prize

**\$600
WING PIANO**

The best piano manufactured by the well-known piano manufacturers, Wing & Son, New York City, N. Y., will be given the agent sending us the largest number of subscriptions before June 10, 1910. : : : : :

Second Prize

**\$100
CASH**

Will be given the agent sending us the second largest number of subscriptions before June 10, 1910. : : : : :

\$200.00 will be distributed among the eight next highest agents as follows:

3d Prize, \$50	Pen of Fowls, your choice, or Incubator or Brooder, any make you desire
4th Prize, \$35	" " " "
5th Prize, \$30	" " " "
6th Prize, \$20	Trio of Fowls, your choice, or Incubator or Brooder, any make you desire
7th Prize, \$20	" " " "
8th Prize, \$15	" " " "
9th Prize, \$15	" " " "
10th Prize, \$15	" " " "

In making your selection of Fowls, Incubators or Brooders, they must be selected from Advertisers in American Poultry Journal

Special Instructions to Agents

1. Renewals count the same as new subscriptions. 2. Cash must accompany all subscriptions; this will avoid any misunderstanding. 3. Keep a duplicate list of all subscribers sent us in case any question arises when the contest closes. 4. In case of a tie the value of the prize will be divided. 5. The subscription contest closes June 10th, 1910. All letters postmarked that day will be counted, thus giving those at a distance an equal chance with those near. 6. A list of the winners will be given in the July issue, 1910. 7. All agents may work where they please; this is fair to all. Send for more coupons or any supplies you need. 8. The coupons are made with receipts at the side to be torn off and given to subscribers. This assures the subscriber that you are our authorized agent. 9. No subscription can be sold for less than 25 cents. 10. You must send at least two subscriptions to entitle you to agents' commission or prizes. 11. All subscriptions must be taken on the merits of the publication. 12. Notice—Sell our book, "Origin and History of All Breeds of Poultry," at \$1.00 and keep 25 cents as your commission, this will count as four subscriptions on the contest. Also, take three years' subscriptions to American Poultry Journal at \$1.00 and keep 25 cents as your commission, this also will count as four subscriptions on the contest. : : : : :

TODAY IS THE TIME TO START if you wish to secure one of our new books FREE. Remember, too, that if you get an early start you have the advantage of always being in the lead, and this is better than to be always trying to catch up with the other fellow.

We will furnish you with a sheet of special bargain coupons which you can use if you desire. These coupons have been successfully used on former contests and whereas you only receive 10 cents as your commission when using same, you will find that you can get many more subscribers. In fact, we have agents who give all of their commission to the subscriber and in this manner get many more subscriptions. Send for as many sample copies as you can use to advantage and they will be sent you free of charge.

American Poultry Journal Pub. Co., 358 Dearborn St., Chicago

NOTICE: SEE OTHER PAGE FOR SPECIAL OFFER THIS MONTH

Special Offer for Month of February, 1910

WE will give the following prizes to the agents sending us the largest number of subscriptions during the month of February, 1910. If you want a first class incubator, brooder or a choice trio of fowls without cost, this is your opportunity. **START TODAY!**

1st Prize---A \$20.00 incubator or brooder, any make you desire, will be given the agent who sends us the largest number of subscriptions to American Poultry Journal during the month of February, 1910.

2d Prize---A \$15.00 trio of fowls, any variety, selected from the yards of an advertiser in American Poultry Journal, will be given the agent who sends us the second largest list of subscriptions during the month of February, 1910.

3d Prize---A \$10.00 incubator or brooder, any make you desire, will be given the agent sending us the third largest number of subscription during the month of February, 1910.

These prizes are given in addition to the grand prizes on opposite page of this issue and all subscriptions sent us during this month will count on both the special February prizes and the grand prizes, therefore you can win both an incubator or brooder and a grand prize if you start to work right now.

Do not delay to take advantage of this opportunity to kill two birds with one stone. Remember, you send 25 cents to us for each subscription and keep the balance of the money as your commission. You receive our grand book, "Origin and History of All Breeds of Poultry," for the first six subscriptions you send us besides your commission and the chance to win one of the February special and grand prizes, also you receive four counts for every 3-year subscription and every Origin and History of All Breeds of Poultry which you sell.

Send for samples and coupons today, they will be sent to you at once free of charge. Start today as you are getting in on the ground floor.

CONCORD, MASS.

**PEARL GRIT THE EGG MAKER**

Open the Gizzard of any egg-producing fowl and you find small stones, bits of shell or even glass and other hard substances. Why? Nature demands it. Following Nature's demands, the owner of profit-producing poultry "feeds" that which is demanded—and he gets healthy fowls and top-notch production of eggs. The proposition is just the same whether you have six hens or 600 hens.

Pearl Grit, the "True Grit." Shell-making was originally supposed to require shell grit. This, scientific research says, is true as far as it goes, but it also says that feathers are known to contain a considerable proportion of glass, that lime enters the shell construction, and that a fowl needs grit to produce and retain perfect health and greatest production. PEARL GRIT is constructed to give just what is BEST adapted for a fowl's system. Chemical analysis shows that it contains 60% calcium carbonate (lime), 14% magnesium, besides iron, silicon, aluminum, oxides and other shell-building, muscle-making, egg-forming and feather-growing materials. PEARL GRIT is susceptible to the necessary assimilation, is clean, white, nutritious, giving strength and vigor. Poultry that has access to PEARL GRIT needs no further grit of any kind to meet Nature's requirements.

Endorsed at Home

Ohio Marble Co.,
Piqua, Ohio.

Gentlemen:—For two years I have used Pearl Grit with the best possible results. I take pleasure in recommending this grit to poultry raisers as one of the best products on the market to-day. I know from experience, it will do just as you advertise.

Piqua Egg Farm,
F. B. Magill, Prop.,
Piqua, Ohio

Safe to Recommend

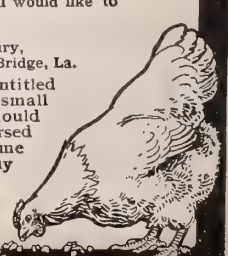

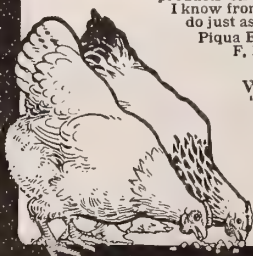

Ohio Marble Co.,
Piqua, Ohio.

Dear Sirs:—Please give me price on your Pearl Grit, prepaid to Breaut Bridge, La. It was recommended to me by one of your customers, Mr. J. E. Daily of Sunset, Va. I would like to try it.

Yours truly,
Joseph Maury,
Breaut Bridge, La.

Write Us To-day for our FREE Booklet entitled "TRUE GRIT." It tells a lot of things the small owner or the professional poultryman should know. It tells why PEARL GRIT is endorsed and purchased year after year by the same people—and tells why YOU should buy it for your own flock. Write now.

THE OHIO MARBLE CO.,
709 S. Cleveland St., Piqua, Ohio.

Owen Farms Owen Farms

Story of the N. Y. and Boston Shows, 1910

We indicated to you in our last month's advertising that something would be doing at New York and Boston, but even with our intimate knowledge of the birds we had, their quality and fitness for showing at these two large shows, we hardly anticipated that when the actual battle had taken place we would be able to count one hundred and fifty-one birds placed under the ribbons at these two shows, especially when you consider that there were only nine birds in Boston that were shown in New York. This, too, in spite of the fact that the four varieties in which we were exhibiting were quite the largest classes of the whole show, where the competition was as keen as ever before in the history of these two mammoth exhibits.

Pens

Mr. Delano and the writer like to win the pen at New York and Boston. One of our very good friends and competitors asked me in Boston: "How is it, Mr. Owen, that you always manage to win pen?" I answered: "Because we feel that the pen points count double (and in many cases the show actually arranges it that they should), and consequently we are not unwilling to take the best cockerel from the line, or the best cock, as the case may be, and add it right to our pen, if by doing it we think we can carry off the pen honor."

Our record this year is nothing short of marvelous and will make anyone stop and think. At the New York show we won in every class entered. First pen in Buff Orpingtons, first pen in White Wyandottes, first pen in White Rocks, and the most coveted perhaps, and that having the strongest competition, the first pen in Barred Rocks. Then, to cap the climax, we added the first pen in pullet mating Barred Rocks. At Boston our record was nearly the same. The only variety in which we failed was Barred Rocks, and there we took second. We won first Buff Orpington pen. We showed a White Orpington pen here and won it easily, and we also showed a Black Orpington pen here and won it easily. Our First White Rock pen was fairly considered the feature of the show, while our first White Wyandotte pen attracted the usual amount of attention.

Every breeder knows what extraordinary care it takes to mate a pen for exhibition where they are to be judged bird by bird and any defect in any one bird practically throws the pen out, and I doubt if we shall ever see a winning more satisfactory to ourselves or more sweeping.

White Rocks

The royal battle waged in White Rocks at Madison Square Garden was this year perhaps more interesting than ever before. Last year, if you remember, we took the collection with 28 points, against 27 points of our nearest competitor, and the fierce competition was between the pens displayed there. Our pen at that time was thought to be the best ever produced, and it was a question whether it would be exceeded in quality for some years to come. This year the competition was even stronger, and we are pleased to say that again we took this premier honor. The male bird heading the first pen received the special for champion male and also the special for best shaped male, and altogether it was generally admitted that it was a pen better than our first of last year. All along the line we took our usual share of the honors and came out with 37 points, as against our 28 points of the year before. Here, again, the number of winners that we have sold throughout the United States this fall has been most remarkable. We have been represented by winners in nearly every show of prominence and I dare to say that we have sold more good birds, three times over, that have done what our customers expected and required than any other dealer.

If we know what you want in White Rocks we can furnish the quality you wish. Please mark this: We do not attempt to do it at a price that will allow you to be disap-

pointed. We ask a fair price to accomplish what you wish and we rarely, if ever, fail in securing what our customers desire. Our records show that we are the leading White Rock breeders in the United States and we shall be glad to send you these records in our catalogue.

White Wyandottes

Whenever I start to write anything about White Wyandottes there is a broad smile that always comes over my face. Why is it? Because I enjoy saying everything I can about this fascinating variety. From the time the White Wyandotte is four weeks old to the time he is ready to go into the show room he is a picture of grace, style and everything that goes to make a pleasing chicken. The true curves of a Wyandotte, with full breast, with tail carried just at the right height and the length of back that is ideal, coupled with the perfect head, stops me every time wherever I am.

If we are at the very top of White Wyandotte breeders, as I think we are, and our records prove, is it any wonder that we take much satisfaction therefrom? Study our winnings carefully at Chicago and at Boston and at New York and see if you can come to any other conclusion. The first pen at New York two years in succession with the hottest competition ever known, and each year the pen being pronounced the best ever exhibited. This year at Boston we won 55 points in the collection, the largest number ever secured by any one breeder in the best show ever held there, and the competition was hot and no mistake. Canada was there in full force with large strings, in addition to our United States breeders.

I can give you more for your money in White Wyandottes, and I will, than any other breeder in the world. Our plan for furnishing eggs for hatching this year, which you will find further on, should mean more to the White Wyandotte breeders of this country than can be taken in at the first glance. We have mated the grandest pens we ever put together and we are going to give in type, head points and in color help and advancement to everyone to whom we furnish eggs this year that is most significant and, better than all else, we are going to give you this great advancement at a very minimum price considering the quality that we can furnish. Our White Wyandotte eggs will be eagerly sought, as they have been in previous years, and I strongly urge upon you the necessity for early ordering.

Barred Rocks

When anyone dares to come out a month before the show in his advertising and predict he is going to do something in Barred Rocks at Madison Square Garden it shows considerable confidence. This we did, and we feel that we have made our prediction come true. We had twenty-one birds under winning ribbons at the New York show, ten of them under the first ribbons. They won fourth, sixth and eighth hen, third cock, fifth cockerel and eighth pullet; and in addition to this the first exhibition pen, which is, as we have said before, of far more consequence than any other first; and the first pullet breeding pen. All of the birds in the first pen, both exhibition and pullet breeding, were of our own breeding and rearing and we only had one bird at New York that was not raised by us. At Boston we won, as you will notice, with eight birds under the ribbons, winning second cockerel, fourth and fifth pullet and second pen. There is no question but that this settles beyond peradventure the fact that we shall maintain the high standing and success that Gardner & Dunning always attained, and if we do not go far in advance of what has been accomplished in Barred Rocks heretofore by them we shall be disappointed.

These are the points. We have birds of exactly the right kind of barring, of the best shape and type of any leading farm in Barred Rocks, both in the male and female line. We have strength and vigor and size that is lacking in so many strains of Barred Rocks, and if I say to you that I can give you help and success in this line, I know whereof I speak.

Be sure and let us know whether you are wanting the male line or the female line. We have a grand lot of cock-

Owen Farms

Wm. Barry Owen, Prop.
Maurice F. Delano, Mgr.

Box A, Vineyard Haven, Mass.

Owen Farms Owen Farms

erels in each which we can supply as breeders that will please our customers, and at the right price. We also have some fine yearling hens, together with pullets, in both male and female lines, that would give you splendid results.

Our eggs for hatching are ready, and we advise early ordering, as in our other varieties.

Buff Orpingtons

When I say that our trade in Buff Orpingtons this last season has been three times as large as we have ever had and has grown to a mammoth business, I am not overstating it. The reason is not far to seek. The blood lines of our Buffs, coming as they did straight from Mrs. Wilkinson's flock (of Scotforth, Lancaster, England), unquestionably the best flock in England, had at the time we secured it years of breeding that had established remarkable surface color and undercolor (particularly in hackle), a vast majority of clear buff tails both in male and female, and freedom from white and black. Everyone who breeds buff varieties of any kind realizes fully what this means. You cannot breed good buff without generation after generation of birds who possess these qualities.

We have unquestionably sold the winners of more shows of prominence throughout the United States this fall than all other dealers in Buffs combined, and there is scarcely a flock of successful Buffs in this country that does not give us the credit of their success in the foundation blood which they have introduced from Owen Farms. The first cock at New York, Madison Square, this year was bred from Owen Farms eggs sold two years ago to H. H. Kingston, Rochester, N. Y. Last year he was shown as a cockerel and won fifth, and I personally had him out of the coop twenty-five or thirty times showing him to people as being the best surface colored and undercolored bird, together with fine shape, that I had ever seen in a Buff. He developed into a grand cock, weighing over eleven pounds, and was pronounced by everybody as the best ever seen. He won champion honors in every particular, and also had the distinction of being the sire of the second pullet, which was as grand in color and type as her sire.

Our first pen at New York and our first pen at Boston were both pronounced nothing short of marvelous for evenness of color and perfection of true Orpington type. All along the line our Buffs showed the same sterling quality that has made them so famous. The pens we are mating up this year contain the best birds that we have ever owned and are as sure to produce exceptional and grand birds as have ever appeared in the show room in this variety, and if you will take due notice of our plan for furnishing eggs for hatching in another portion of this advertisement you will see that we are bound to give you the opportunity of success which we strive to attain for ourselves.

White Orpingtons

Everyone who is interested in Orpingtons and who reads the account of the New York show in the poultry papers will notice our winnings in this variety. When I returned from England seven years ago I brought with me the best flock of White Orpingtons that could be secured there, and have bred them for many years. The White Orpington, therefore, is not a new variety to Owen Farms. I am frank to say that in the beginning the Buffs were so much more popular than the Whites that we devoted ourselves almost exclusively to the Buffs, but, thanks to our friend Mr. Kellerstrass, the situation has changed materially. At the New York show there were ninety-six Buffs in the single classes, ninety-four Whites and seventy-seven Blacks. This is to a fairly large extent true in the large shows in this country at the present time, and that the White Orpington is bound to take a pronounced position we thoroughly believe. In addition to this the improvement in the past seven years in the White Orpington has been very wonderful and the type has become good, almost equal to the best. The size is up to what everyone wants in the Orpington, and the color is so much better that it is not too much to say that in a few years the White Orpington is likely to contest the

question of color with our standard American birds in whites.

Not a single person who saw our White Orpingtons at Boston or New York, where the competition was very hot, would gainsay the fact that Owen Farms' display was the whitest and of as fine type as has ever been shown in this country, winning as we did at New York first cock, second cock, first hen, second hen, first and fifth cockerel, and at Boston first cock, first and third hen, first and second cockerel, first, second, fourth and fifth pullet, and first pen. Not a bird was shown at Boston that was at New York.

We demonstrated fully that Owen Farms is to contest the leadership in this most important variety of the Orpington. Our numbers are not large compared with our other varieties, so that the orders for White Orpingtons, both for stock and eggs for hatching, should be placed very promptly.

Black Orpingtons

For some time past Owen Farms has not placed very much weight upon its advertising of the Black Orpington, although it has from the beginning bred and maintained here a flock of the most remarkable quality. Our catalogue tells of our winnings up to the time that we almost discontinued showing in New York. Facts and figures, however, have shown us that the popularity of the Blacks has increased from year to year, especially during the last year very rapidly, and our business has quadrupled. We have, therefore, this year prepared for a very much increased trade.

In Boston, as you will notice, we won first, second and third cockerel, with three entries; first second, fourth, fifth and sixth pullet, with five entries, and first Black Orpington pen.

We have extraordinary quality and that we will be headquarters for Blacks, as we are for Buffs and Whites, you may be assured. We dare say that no flock of Blacks in this country will compare with ours in two particulars, namely, large size, birds low down, with enormous depth from hock to top of back; and, second, the color of the plumage. The green color free from purple, so much sought, is what we have and what we can give you, and I have no hesitation in saying to everyone interested in Blacks that both in stocks and in eggs for hatching we can and will do you more good than anyone else is able to do this coming year.

Our Black Orpington cockerel at Boston took the special for best Orpington male in the show.

Breeding Stock

We carried a string to Boston in practically all of our varieties that was better even than the string which we carried to New York. Three weeks at this time of the year makes a marvelous difference in the way birds are matured. We have now, and shall have through the whole spring, exceptional breeding birds, both in male and female, in each and all of our varieties. Now is the time to write about them and secure what you wish. The earlier you do it the larger our flock and the better selection you would naturally get the advantage of. Don't forget that you save a lot of time if you indicate to us fully what you want, and particularly if you ask us to describe exactly what we can do for you for a fixed price. Business results at once and we guarantee satisfaction, allowing you to return without expressing any reason if they are not satisfactory, and we pay return charges on all stock in every instance.

Eggs For Hatching

This is the important matter before all of us from this time until the whole hatching season is over. Owen Farms has taken a departure this year and we feel that it should be explained fully, so that everyone who runs may read and thoroughly understand what we are doing and why we are doing it.

In the first place, the writer has a large interest in the success of the poultry business in the United States, an uncommon desire to see it grow and prosper. Each one

Owen Farms Wm. Barry Owen, Prop.
Maurice F. Delano, Mgr. **Box A, Vineyard Haven, Mass.**

Owen Farms Owen Farms

who writes Owen Farms, either for information, advice, price on stock or eggs, becomes to a certain extent an acquaintance of both Mr. Owen, the proprietor, and Mr. Delano, the manager, and we feel a personal interest in them. I have carefully gone over our business of the last few years and I have come to the following conclusion, that nineteen people out of twenty cannot afford to pay \$20 a sitting for the best eggs that Owen Farms can produce. Having \$20 pens, which we would allow the customers who could afford this price to entirely monopolize to the entire exclusion of the other nineteen out of the twenty, seemed to us not to reflect and express that intimate, close interest which we have in each and every enthusiastic fancier.

No One Excluded From the Possibility of Growing the Best Birds of the Year

We therefore decided that we would list our pens just as we always have, describing the matings carefully and mating only our very best birds, limiting our matings considerably, and that we would have one uniform price, giving everybody a square deal and taking eggs from the pens in such a manner that everyone who bought eggs of us should have the undoubted possibility and probability of raising some of the finest chicks of the year. To the man who could pay \$20 for a sitting this method does not work to his disadvantage as he might at first suppose. If, for instance, he was buying two sittings at \$20 a sitting he would pay us \$40 and get thirty eggs, according to our methods of last year. This year he may purchase of us for \$50 one hundred eggs, and among that hundred eggs he would receive probably as many as thirty eggs from the matings that we have heretofore listed at \$20 per sitting. He gets, therefore, in addition to what he would have received last year, great possibilities in the balance of the eggs, for I can assure each and every customer that we will not have a single mating that will not produce birds of remarkable quality.

We do not pose as philanthropists in this matter, but so long as the writer, Mr. Owen, lives and continues in the poultry business the fair interest of our customers shall be our first consideration.

To state it clearly just what you can do with Owen Farms this year in eggs for hatching, I would say that you may receive from any of our varieties 10 eggs for \$7.50, 11 eggs for \$8.25, 12 eggs for \$9, 13 eggs for \$9.75, 14 eggs for \$10.50, 15 eggs for \$11.25; 50 eggs for 60 cents each, or \$30; 100 eggs for 50 cents each, or \$50.

Every egg will be marked with the number of the pen and the variety from which it is taken, and by comparing it carefully with our mating list you will see just what you are getting, and that we shall give the same satisfaction in results that we have heretofore we are positive, for already we are hatching from our eggs with great satisfaction as to fertility and hatch.

We guarantee three eggs out of four to be fertile, and where the number is an odd number and cannot be divided by four we shall give our customers the benefit of the extra egg.

We advise early booking of orders, for this allows shipment to be made at the time you wish them, and in some of our varieties particularly the number of the pens to be

mated is somewhat limited, and you are likely to be disappointed if you put off your orders too long.

We shall continue to pack them with the extreme care that we have used heretofore and can assure our customers that they can order eggs fearlessly from any point in this country or Canada, as our reports have been extremely favorable from eggs shipped to the extreme North and South and to the extreme West.

Express Charges on All Original Orders for Eggs for Hatching Prepaid to Points in the U. S. or Canada

This is not the first time that Owen Farms has proposed something which is an innovation. Among other things they were the first to introduce to the poultry world stock guaranteed to win at any show in America.

In adopting this very broad proposition for the benefit of their customers they are acting with care and a knowledge of just what it means, both to themselves and to their customers, and they have no hesitation in doing it. As almost everyone well knows, express rates can be made better if made at the point of shipment, and particularly when paid in advance. We know how much the express will cost us; you do not know how much the express will cost you. We believe that this step that we are taking is the greatest step that was ever taken in the poultry world for the protection and benefit of the customers of any one particular farm.

Our Mating List

We are preparing and shall be able to send to everyone our mating list for 1910 about February 1, or at the time that this advertisement appears. Our matings are as carefully described as in years gone by and that you ought to receive one whether you purchase eggs of us or not, I confidently believe. A postal card asking for it and naming the variety you are interested in will bring it with the least possible delay.

Advertising

Some of our competitors are urging against Owen Farms that they are spending too much money in advertising, or, if not too much money, that they are spending a great deal, and that our customers have to pay the bills. Just a word on this.

A small dealer, we will say, does \$1,000 worth of business in a particular breed and he spends \$100 a year in advertising and you scarcely notice it, but he has spent 10 per cent of his receipts. A breeder of a little larger size does a business of \$2,000 and he spends \$200 a year in advertising and you notice it more particularly. He has not spent more than the first man in proportion to his business. Still another man does a business of \$20,000 and spends \$2,000 in advertising, and still another does \$40,000 worth of business and spends \$4,000 in advertising. Who has spent the most money as far as his customers are concerned? Is it not the same? Again, you will find a large number of breeders who are handling just one breed who are advertising whole pages. Has it occurred to you that Owen Farms is using

Owen Farms Wm. Barry Owen, Prop.
Maurice F. Delano, Mgr. **Box A, Vineyard Haven, Mass.**

Owen Farms Owen Farms

two pages with four breeds, and these the most prominent of all in the United States, is, as a matter of fact, only using and spending for advertising one-half of what that other breeder is spending in advertising his single breed? Owen Farms is only using one-half a page for Orpingtons, one-half a page for Barred Rocks, one-half a page for White Rocks, and one-half a page for White Wyandottes when they are using two full pages. As a conclusion I say to you that no farm in this country will or does give more value to their customers for their money than Owen Farms. This is true today and always will be.

151 Birds

Under Ribbons Awarded Owen Farms at New York and Boston, 1910

We have thought it only fair to you and ourselves to give you a bird's-eye view of what Owen Farms has done in these two shows. If anything has ever happened before equal to it, it has not come under our notice, and when I say to you that among all of these birds there were only nine that were shown at the two shows, New York and Boston, it means a record still more remarkable.

Come to visit us if you can. We have much to show you and certainly a collection of birds that will make any enthusiastic fancier well repaid for his journey.

MICA-CRYSTAL THE BEST GRIT ON THE MARKET

Contains Mica, Iron, Magnesium and Quartz, each in its purest and best form. It is of such peculiar formation that it will not take a polish as is the case with grit made from white quartz or marble and unlike limestone grit, or grit of like soluble substances, is not dissolved by the fluids in the crop, consequently it never loses its sharpness. It sharpens itself by contact, the only grit that does, and therefore excels all others as a grinder.

Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Grit is to the fowl what teeth are to other members of animal creation.

Let us prove the truth of what we say by filling a sample order for you. Manufactured only by

Four First-Class Poultry Publications, Published in Different Parts of the U. S., at One-Half Price

American Poultry Journal - - - } \$1.00
American Poultry Advocate - - - } Regular Price \$2
Poultry Item and Commercial Poultry

AMERICAN POULTRY JOURNAL needs no introduction, as it is the oldest, largest and best poultry paper in the world. Is the leader of the poultry press, and is now in its 40th volume. No poultryman can afford to be without it, as it has no equal.

AMERICAN POULTRY ADVOCATE, the great New York state paper published at Syracuse, and full of good reading matter, is always welcomed by the subscriber. Now in its 18th volume. It is conceded to be one of the best poultry papers published in the east.

POULTRY ITEM, published at Sellersville, Pa. Now in its 12th volume, and although a young publication compared to the others embraced in this offer, it is safe to state that Poultry Item is rapidly pushing toward the front. Full of valuable information and complete show winnings.

COMMERCIAL POULTRY, published at Marseilles, Ill., is now in its 18th volume. True to its name, it instructs the reader on poultry as a business. Its volumes contain articles by excellent writers who contribute regularly and make it interesting for the reader.

When reading this do not lose sight of the fact that American Poultry Journal contains from 60 to 166 pages of interesting reading matter; that it has a strong corps of field men who report on conditions in their territory each month so that it contains the "newsiest" news of the poultry world. A single copy is worth more than we ask for one year's subscription to all four.

American Poultry Journal Pub. Co.

358 DEARBORN STREET ::

CHICAGO, ILLINOIS

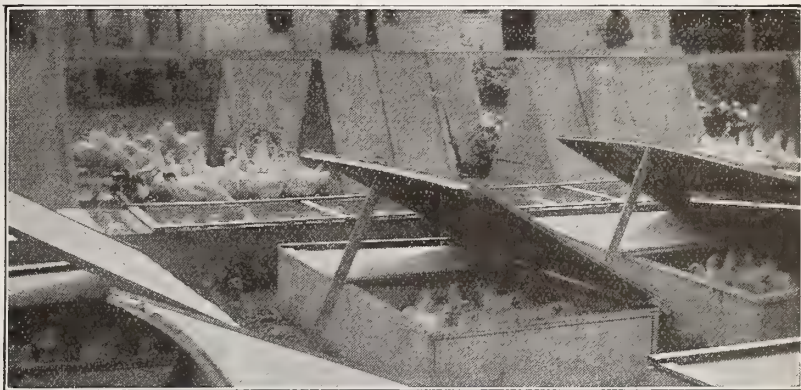

A LIVING FROM POULTRY

\$1,500.00 from Sixty Hens in Ten Months on a City Lot 40 Feet Square

TO the average poultryman that would seem impossible and when we tell you that we have actually done a \$1,500 poultry business with sixty hens on a corner in the city garden forty feet wide by forty feet long, we are simply stating facts. It would not be possible to get such results by any one of the systems of poultry keeping recommended and practiced by the American people, still it is an easy matter when the new

Philo System

is adopted.

The Philo System is Unlike All Other Ways of Keeping Poultry

and in many respects just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard-of results that are hard to believe without seeing.

The New System Covers All Branches of the Work Necessary for Success

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss, and the broilers are of the very best quality, bringing here three cents per pound above the highest market price.

Our Six-Months-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with food others are using.

Our new book, the **Philo System of Poultry Keeping**, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and fifteen pages of illustrations showing all branches of the work from start to finish.

Don't Let the Chicks Die in the Shell

One of our secrets of success is to save all chickens that are fully developed at hatching time, whether they can crack

the shell or not. It is a simple trick and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

Chicken Feed at 15 Cents a Bushel

Our book tells how to make the best green food with but little trouble and have a good supply, any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food and is to keep a cow without hay or fodder.

Our New Brooder Saves Two Cents on Each Chicken

No lamp required. No danger of chilling, over-heating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all the lice off the chickens automatically or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to take and use them. One can easily be made in an hour at a cost of 25 to 50 cents.

Testimonials

Bellefontaine, Ohio, June 7, 1909.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—I just want to tell you of the success I have had with the Philo System. In January, 1909, I purchased one of your Philo System books and I commenced to hatch chickens. On the third day of February, 1909, I succeeded in hatching ten chicks. I put them in one of your fireless brooders and we had zero weather. We succeeded in bringing through nine, one got killed by accident. On June 1, one of the pullets laid her first egg, and the most remarkable thing is she has laid every day since up to the present time. Yours truly,

R. S. LaRue.

Valley Falls, N. Y., September 10, 1909.

My Dear Mr. Philo:—I want to tell you how pleased I am with my use of the Philo System during the past year. The fowls laid exceptionally well in the New Economy Coop, much better in proportion than those in my old style house. The fireless brooder has solved the problem for me of raising extra early chicks. I am going into your methods more extensively this coming year. Wishing you success, I am, Sincerely yours,

(Rev.) E. B. Templer.

Osakis, Minnesota, June 7, 1909.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—You certainly have the greatest system the world has ever known. I have had experience with poultry, but I know you have the system that brings the real profits.

Yours, Jesse Underwood.

Brockport, N. Y., Sept. 12, 1908.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—I have had perfect success brooding chickens your way. I think your method will raise stronger, healthier chicks than the old way of using lamps and besides it saves so much work and risk.

Yours respectfully,

M. S. Gooding.

South Britain, Conn., April 10, 1909.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—I have followed your system as close as I could; the result is a complete success. If there can be any improvement on nature, your brooder is it. The first experience I had with your System was last December. I hatched seventeen chicks under two hens, put them as soon as hatched in one of your brooders out of doors and at the age of three months I sold them at 35 cents a pound. They then averaged two and a half pounds each, and the man I sold them to said they were the finest he ever saw, and he wants all I can spare this season. Yours truly,

A. E. Nelson.

Send \$1.00 direct to the publisher and a copy of the latest revised edition of the book will be sent you by return mail.

Three Pound Roasters Ten Weeks Old

The Poultry Review

A monthly magazine devoted to progressive methods of poultry keeping. \$1.00 a year. Edited by E. R. Philo, author of the Philo System book. Results of experiments on his poultry plant are given each month. Rev. W. W. Cox, associate editor, is handling a six-hen plant by the Philo System and will give full particulars each month of every step taken to secure the largest returns from six hens. Also a review of the best poultry articles from other publications. The price of the Review is \$1.00 a year for twelve copies by mail, postpaid. Or with the Philo System book for \$1.50.

Our Wonderful Book Offer

Successful Poultry Culture, Only 50 Cents

American Poultry Journal has just closed a contract with the publishers of "**Successful Poultry Culture**," which enables us to offer this book for one-half its regular selling price, \$1.00. This is such a really good offer and such a bargain that we want every reader to read this ad carefully and take advantage of this great bargain offer. This book has always sold heretofore for \$1.00, and thousands of copies and two editions have been sold at that price, and not one kick has ever been received.

Mr. Clarence Ward

the author of "**Successful Poultry Culture**," is a son of C. J. Ward, the founder and for eighteen years the publisher of American Poultry Journal. He was brought up in a hen coop, and is one of the best experts on poultry culture in the country.

Successful Poultry Culture

contains 128 pages and 30 handsome illustrations of fowls and practical plans for building poultry houses. It is a thorough and scientific treatise on raising poultry for profit; and is especially designed for the beginner. If the instructions in this book are followed success will surely crown your efforts. The publishers have sold thousands of copies of this book to satisfied buyers all over the country, and they can show testimonials by the hundreds from people who would not take fifty times the price of the book if they could not get another one. The chapter on "Scientific Feeding" is alone worth many times the price of the whole book as it actually tells how to

Save Three-Fourths Your Feed Bill

This system of feeding is the greatest and most valuable discovery made in the twentieth century to the poultry man. It will actually double and triple your profits from the start, and has been tried in many large and small poultry plants with the greatest success, and in every case it has placed these poultry plants on a large dividend-paying basis.

The largest item of expense in raising chickens is the feed bill, and if you can reduce this bill three-fourths, it stands to reason that the matter of big profits is solved. The revised edition of this book,

Successful Poultry Culture

contains a chapter on Scientific Feeding that fully explains this method of feeding. It is based on a fundamental law of nature and is a correct and scientific principle of feeding chickens and ducks that will **save three-fourths the feed bill**, and at the same time will make your young chickens grow faster, lessen the mortality, make young pullets lay at four and five months old; also mature young cockerels for market and show room at the same age. It will make your hens lay in midwinter every day, when market eggs are bringing the highest prices; will keep your laying stock in perfect health in close confinement, and your hens will lay fertile eggs that will hatch strong, vigorous chicks that will live. In fact, with this method of feeding you can

Double and Triple Your Profits in the Poultry Business

This is not a patented or prepared food sold by some manufacturer at a high price. If you know how, all you have to do is to buy one bushel of common grain at the market price, take it home and make **four bushels**, which four bushels will contain more and better food value than the original bushel of grain.

No expense in preparing it; no machinery of any kind needed; no fire or cooking, and it takes less time than to cook a mash and is as easy to feed as common grain. The 128-page new and revised edition of

Successful Poultry Culture

contains this valuable information, and is worth a hundred times its price to every poultryman and stock raiser. It makes no difference whether you keep only a few chickens and one cow or a thousand of each, you cannot afford to be without it. Remember, we guarantee it will tell how to **save three-fourths your feed bill**.

Buy the Book, Price Reduced to 50 Cents

Do it today, for you will need it when you want to sell eggs at high winter prices and at the same time **save three-fourths your feed bill**. If you keep only twenty hens this book will save you twice its price in a few weeks' time after getting it. If you keep more it will **double and triple your profits every day in the year**. Send all orders to

INTENSIVE CHICKEN FARMING PAYS BIG

The Following Brief Address, by Mr. P. M. Wickstrum, Will Be Of Interest To Readers of the A. P. J.

"Friends, Good Women and Men:—Down in the Gulf Coast region of Texas—out in the irrigated districts of Colorado and other Western States, 'Intensive Farming' has developed into a practical science. Wonderful things are being accomplished. With a few hundred dollars and but ten to twenty acres of land many a man is laying the foundation to a large fortune. Intensive farming is a certainty—a 'cinch,' as we ordinarily say. The soil is fertile, the water supply is abundant, the seed planted is reliable and a bumper crop can always be depended upon.

"But all of us can't go South or West and buy irrigated land. We've got to stick to our home places. We don't want to leave our friends, anyway, if we can make good money where we are.

"Now, I just want to say to you that you need never leave your present home to make big money. Acre for acre, dollar for dollar, work-hour for work-hour, I will tell you of a business that actually *beats* intensive fruit and truck farming. That business is Intensive Chicken Farming.

"With less land—less money—and less time, Intensive Chicken Farming pays the biggest profit—and I refer you to government statistics to prove it. You all have enough land, enough money and enough spare time to go into Intensive Chicken Farming on a paying scale.

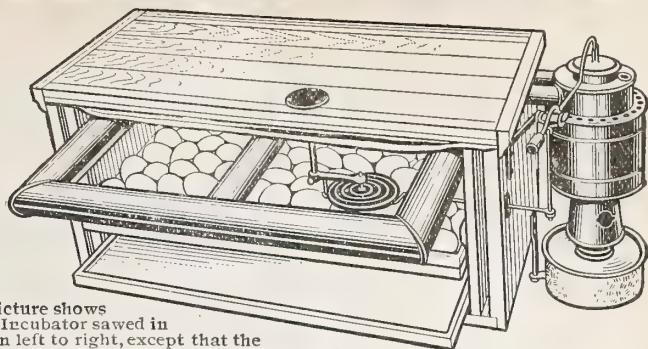

"Now, what *is* Intensive Chicken Farming? It is hatching and raising chickens scientifically—having the proper equipment. Poultry raising thus becomes a science—a certain, big-paying investment. Part of your knowledge you must get by experience—but the most important part you can get from the experience of others if you know where to go.

"Most essential, of course, is a good incubator—a GOOD incubator. No hen will attend to business well enough to get a sitting job with an Intensive Chicken Farmer.

"You all know that I am in the Incubator business. I know how my incubators are made and I think mine is the very best machine of its nature. (Pardon my enthusiasm.) A great many Intensive Chicken Farmers do, too. Sixty-two out of every hundred incubators I sold last year went to men and women who already owned one or more of my incubators. This emphasizes one thing, sure, that Intensive Chicken Farming pays well, or else they wouldn't be going into it on the bigger scale. It is incidentally proof that these people are convinced by experience that my incubator is the best and most serviceable.

"I never advise any one to buy one of my incubators until he or she has seen one at a neighbor's or has tried one at home. I owe it to you and you owe it to yourself that you investigate before you buy. I do advise you to *investigate* my incubator. I will put the proofs before you in the shape of books, letters from customers—and one of my incubators itself to try free if you want it. The entire investigation cannot cost you anything. I won't let it. If you do not become a customer of mine we will still be friends. In case you purchase an incubator I will start you on the right road to Intensive Chicken Farming (if you are a beginner). And I will be constantly at your service, no matter how much or how little experience you have had. I am in good health, have recently increased the capacity of my plant greatly, and I expect to still be in business at Lincoln in 1940. I am always at your service. If I ever do quit making QUEEN Incubators, I'll jump into Intensive Chicken Farming, and that would be easy, because I always have a large flock on hand, as a result of the great amount of experimental work I do. I thank you."

Poultry raisers are glad to note that the price of eggs for the past 12 months shows a marked increase over a few years ago. They were seldom below 18c last year and in some places they were up to 35c and 40c. Poultry is getting high, too.

This picture shows a Queen Incubator sawed in two, from left to right, except that the radiator was not cut. Observe the position and location of the lamp, the magnificent hot water heating plant inside the machine, the egg tray, chick tray below, the insulated double walls—and the regulator. Note the thermostat, entirely away from the pipes, but very close to the eggs.

Test the Heart and Lungs of the Incubator You Buy

You have no business **BUYING** an incubator until you yourself have tested its **VITAL** organs, its Heating, Circulating and Regulating System. **THAT** is the sure and satisfactory way to measure the length of life and the money-making value of any incubator. You and others who raise chickens for biggest profit should not be guided entirely by illustrations and descriptions. For they can **NOT** show an incubator **IN ACTION**. Nor am I **WILLING** for you to depend upon pictures and type for your knowledge and judgment of the Incubator **MY** company manufactures.

Who could tell by the finest **PICTURE** of a Queen Incubator how wonderfully it **WORKS**? Can any picture tell that the Heating Apparatus of the Queen is made of pure Lake Superior cold rolled sheet copper? Or that thermometers placed in each corner of the Queen Radiator register within $\frac{1}{4}$ of a degree of the same temperature? Or that the Queen is the **ONLY** Incubator with an absolutely perfect, automatic regulator?

The Queen is the **ONLY** incubator with a lamp so safe and efficient that other well-known manufacturers gladly pay to use it—the **ONLY** incubator that is so good, so durable and in every way so satisfactory that the maker can put a wide-open five year money-back guarantee on it and back up that guarantee.

Put the Queen in your barn, wood-shed, kitchen, dining-room, or parlor—I care not where—and it will hatch **MORE** chicks and **HEALTHIER** chicks than any other machine on earth under like surroundings. My catalog tells you **WHY** this is true. My liberal trial plan **PROVES** to you that it is true. From start to finish, this trial and proof can cost you nothing.

I now propose this trial plan:

90 days free trial—more time if you ask for it.

5 years guaranty—worded to suit yourself, if my regular guaranty doesn't suit you.

Direct factory prices—every penny you pay you get back in incubator value—No intermediate "rakeoff" for jobbers and dealers.

Freight prepaid—all Queens are shipped by fast prepaid freight—no trouble, no bother to you.

You know the total cost before you buy.

"The Chick that's born in a Queen Incubator won't have any mother—But he'll have a whole SWARM of healthy little brothers and sisters."

Reader, no matter how much or how little experience you have had in poultry raising, you can most assuredly increase your profit from 100 to 500% by my special advice and instructions on Intensive Chicken Farming. I ask you to spend but a single cent to know my plan. Get my 1910 Poultry and Incubator 'Book, and then at your asking, I will allow you the fairest trial ever offered by any incubator manufacturer. You need my catalogue to know the size and capacity to try.

ONLY by an extended free trial and test, can I expect to prove to you **CONCLUSIVELY** that Intensive Chicken Farming pays the biggest profit of all—that the Queen Incubator puts on a 40 to 50% extra layer of profit over and above any other incubator.

Mine is the squarest, **FAIREST** and **BROADEST** trial plan I have yet been able to think of and I have been in the incubator business a long time. "If there is anything else I can offer that will be mutually fair to you and me, please ask it. Remember, the Queen Incubator on the field of action—in homes and on farms in 46 states—has proven the **GREATEST INCUBATOR** in this country. It has reduced Intensified Chicken Farming to a science—a certainty, a direct road to wealth, requiring less money and work than any other farm vocation. I am willing to go the limit to prove this. Your name on a postal, or this coupon, is the first step for you to take to prove, to your own satisfaction and immediate poultry profit, these important facts. **SEND ME THE COUPON, OR POSTAL, NOW—WHILE MY ADDRESS IS BEFORE YOU.**

CAPONIZING INSTRUMENTS

Milk Fever Outfits, Deboners, Impregnators, Teat Syphons, Forceps, etc. Received the only award at both World's Fairs—St. Louis, '04; Chicago, '93. Illustrated cat. free. Haussmann & Dunn Co., 392 S. Clark, Chicago

DAY-OLD CHICKS

We operate in connection with our large wholesale and retail business in poultry feeds and supplies, one of the largest hatching plants in Eastern New York.

Heretofore, we have been able to cater only to our city store trade, but this season we are enlarging our plant considerably, and solicit your patronage.

We hatch from Standard bred poultry only, of the following varieties:

S. C. White Leghorns, Barred Plymouth Rocks and S. C. Rhode Island Reds

Our breeders are selected with great care out of very large flocks, and we are able to give you chicks that will be true to name, color, shape, etc., and several have reported prize winners at local shows.

Prices, 10c to 15c each. We guarantee to deliver within ten days of specified shipment or refund your money. Send for circulars.

Van Wie Poultry Supply House
512 Liberty St., Schenectady, New York

CHAMPION BROODERS

Our 1910 model is the best and finest brooding device ever put on the market. Outdoor, indoor and lampless brooder, weaning coop and small colony house, all combined in one machine for less money than you pay for just "brooder" in other makes. The Champion is the standard Brooder of the world. We have customers using as many as 50 on their farms. No other brooder like it.

Champion Patents

Many manufacturers are using some of our patented features in their brooders. Beware of these infringements as we intend to prosecute all such manufacturers and users of infringing brooders. Our patents cover all two compartment brooders, others are infringements, and if you buy them you are liable to heavy damages.

How They Work

"I have used two other kinds, but yours beats them all."—Jos. McCloskey, Watseka, Ill. "My Champion raised 145 chicks for me without the loss of one."—E. U. Harris, Hagerstown, Md. "Never had a chick sick with weak legs or bowel trouble in the Champion."—Nick Morris, Goshen, Ind. "I raised 600 chicks in two Champions last year and lost only three chicks."—R. Roberts, Boston, Mass. "My Champion chicks grow like weeds. Keep the brooders out doors all winter."—Jas. Shiner, Augusta, Me. We have hundreds of others on file.

The Champion is the only brooder which will work outdoors in winter without shelter. The powerful heater does it. Uses one-half the oil others use. Don't buy until you get our catalog; it's free.

BUY LAND!

Texas Gulf Coast land, 23 miles from Houston, a city of 100,000 population, and 1½ miles from railroad station of Crosby. This land will be sold in 20, 40, 80 and 160 acre tracts at \$50 per acre. All sales of 20-acre tracts for cash; other tracts, one-half down, balance five years at five per cent. The soil is black and from three to six feet in depth. Abundant rainfall enables you to grow such crops as corn, cotton, oats, sugar cane, rice, vegetables, oranges, figs and all kinds of citrus fruits.

Merrill B. Metcalf, Box F, Greenfield, Ill.

Bronze Turkeys

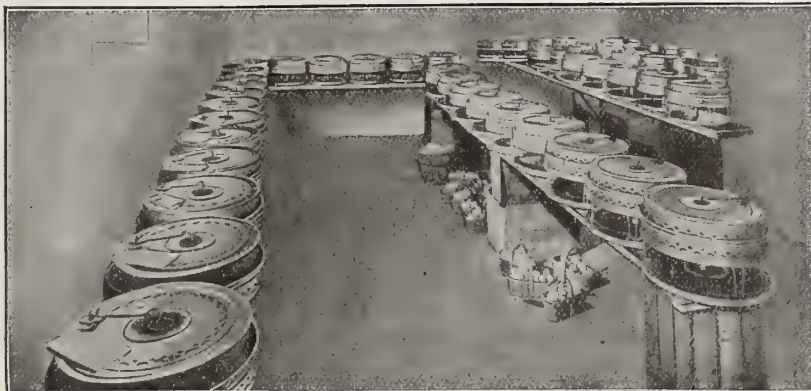

NO BREEDER of Bronze Turkeys can equal the record won by my birds at Madison Square Garden, New York. Eighteen birds entered winning eighteen prizes, also winners at Chicago, St. Louis, Cincinnati, Indianapolis, Nashville, Tennessee, Springfield, Illinois, and the great St. Louis and Pan-American expositions. What better proof as to their superiority.

300--Choice Turkeys for Sale--300

Fine large, well marked young toms at \$8.00, \$10.00 and \$15.00 each. Selected old toms, great large, finely marked fellows at \$10.00, \$15.00 and \$20.00 each. A lot of choice hens at \$5.00 and \$8.00 each. Flocks of five hens and tom at \$35.00. Eggs, \$1.00 each. Address

Mrs. U. R. Fishel :: Box A :: Hope, Indiana

A Little Poultry and a Living

Is the title of a little booklet we will mail free. It was written by the author of the PHILO SYSTEM BOOK, who makes every one of his hens pay him a profit of \$50 to \$100 each.

Metal Mothers

**Our New Discoveries
Make Poultry Keeping
Easy and Profits Sure**

Our machines were used exclusively in the original Philo System plant, where over \$1,500 FROM 60 HENS IN TEN MONTHS has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our system of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen.

Valley Falls, N. Y., Nov. 18, '09.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—I have used your incubators, both the Cycle Hatcher and Brooder Hatcher, during two seasons, and found them very satisfactory, as they were easily managed and gave excellent results every time. The Brooder Hatchet makes a convenient place for brooding the little chicks when first hatched, before putting them into the fireless brooders. Very truly yours,

(Rev.) E. B. Templer.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—No doubt you will be interested to learn of our success with the Cycle Hatchers. We have cleared over \$960 running our hatchery plant consisting of 56 Cycle Hatchers. We are pleased with the results, and expect to do better the coming year. With best wishes, we are, very truly yours,

(Mrs.) C. P. Goodrich,
Elmira, N. Y.

Our 1910 Pattern Metal Mothers

are the perfect results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic.

Large stock of machines at Oakland, Cal., our western shipping point. Write the Cycle Hatcher at the above address for Pacific coast prices.

One Metal Mother complete, \$7.50; two, \$14; four, \$24. One Cycle Hatcher complete, \$5; two, \$9; four, \$17; six, \$24.

The booklet "A LITTLE POULTRY AND A LIVING," fully illustrated and describing these machines, and a complete line of the most approved poultry appliances, mailed free.

Cycle Hatcher Co., 214 William St., Elmira, New York

Buff Wyandottes

At the great Mo. State Show in one of the best classes ever shown, with twelve exhibitors, won first and third hen, third cockerel, second and fifth pullet and first pen, winning three times as much as any other exhibitor. This, with our winnings at Chicago, St. Louis, Evansville and Illinois State Fair, clearly proves our strain the BEST IN THE WEST. Prices reasonable. Satisfaction guaranteed.

J. C. Ritter & Son, Box 243A, Olney, Illinois

S. C. W. Leghorns

At the Illinois State Fair, Oct. 1-9, I won 2d pen, 2d cock, 2d pullet, 3d hen. Sixty birds entered in this class.

Three of the Best Poultry Publications, Practically Supplying the Entire Needs of Every Poultryman, at One-Half the Regular Price

Our Big "3" Combination

**American Poultry Journal } ALL THREE FOR
Western Poultry Journal } 75 CENTS
Farm-Poultry } Regular Price, \$1.50**

American Poultry Journal is the oldest, largest and handsomest poultry paper in the world, and is conceded to be the leader in all things pertaining to poultry. Is copied by both old and new poultry publications. In fact, it has no equal. Now in its 40th volume.

Farm-Poultry, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 20th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

Western Poultry Journal, published at Cedar Rapids, Iowa, is in its 21st volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, thoroughly cover the entire field of poultry literature, and make a poultry library in themselves.

The Greatest Combination Ever Offered

and especially so when you take into consideration the fact that American Poultry Journal contains from 60 to 150 pages of interesting matter, any number of which is worth more than we are asking for one year's subscription to all three magazines.

This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

DR. E. W. WELLS

576 Butterworth Avenue :: Grand Rapids, Michigan

White Wyandottes

Winners at Indianapolis
and Toledo

Bred in line for twelve years. Show birds and a grand lot of tested breeders. Lots of shapely, vigorous cockerels to head your pens. Prices are right.

GEORGE BARKDOLL

Box 62 :: West Unity, Ohio

Ferris S. C. W. Leghorns

Winners at Louisville, Chicago, St. Louis, Toledo, Detroit, Grand Rapids and the Michigan and Indiana State Fairs

Three prizes on five entries is the record of Ferris' Leghorns at the recent Louisville show, where the cock bird shown above won first prize.

We have bred White Leghorns for years, not alone for exhibition, but also for size, health, vigor and profit. We raise our stock on free range and you will find them as good from a utility standpoint as they are from a fancy standpoint.

Ferris' Leghorns are pure white, have typical Leghorn shape and will win for you as they are winning for others.

Choice breeding males and females, \$3.00 each. Exhibition breeding cockerels, the kind that win and breed winners, at \$5.00, \$7.00, \$10.00 and \$15.00; females of the same quality, \$4.00, \$5.00 and \$7.00. All stock is sold on approval.

Eggs for Hatching

We will have ten exhibition pens mated for the season's trade in eggs and chicks. Prices range from \$3.00 to \$15.00 per setting. Choice utility eggs, \$1.50 per 15; \$7.50 per 100; fertility guaranteed. Place your orders now, we will ship them whenever desired. Day-old chicks after April 1. Mating list will be ready in March.

I want you to have my new 32-page catalog—it tells all about Ferris' Leghorns and why you need them. It shows photos of the birds I sell and gives a more complete description of my stock, farm and methods than is possible in this ad. Write today—I will send you a copy free and will be pleased to quote prices on the stock, eggs or chicks you need.

THE FERRIS POULTRY FARM

Geo. B. Ferris, Prop.

555 NO. UNION GRAND RAPIDS, MICH.

Orr's Silver Laced Wyandottes

Don't buy feathers only, or run wild on fads. Buy the best that have the record to prove it. The best all pointed bird. "The Old Original Silver Laced Wyandotte." You can't dispute the great Australian contests for best layer. Two first and greatest, several intermediate, and now the last. What more or stronger evidence is needed? Only the pure bred, unmixed, all American bred bird. The original Whitaker—T. E. Orr strain can make such record. With them it is victory from start to finish. Impossible with mixed strains. Try them. Improve your blood lines. Birds and eggs for sale. John S. Orr, Augusta, Kentucky

Winners For 17 Years Layers

Nixon's White Wyandottes

Have made good, not only for myself, but in hands of my customers. If you want deep round breasts, broad saddles and tails, pure white plumage, together with extra layers, write me. My yards for 1910 are mated with birds that conform very closely to new standard requirements and they are sure to produce winners if winners are produced anywhere. My yards contain Madison Square, Boston, Jamestown, etc., winners, or direct descendants. Eggs ready for shipment after January 15, 1910. Write to day for my literature.

Chas. Nixon, A. P. A. Judge and Member, Box 202, Washington, New Jersey

Quality Barred Plymouth Rocks

Simpson's Barred Plymouth Rocks have again shown their quality by winning at the great Chicago show first and second cock, first and third hen, fifth cockerel, third pen, and specials for best four cocks, best four hens and best four pullets. They always win wherever shown. If you want quality write me. I have some grand birds for sale. Am booking orders for eggs from pens containing my prize winners at \$10.00 per setting. Write for circular and mention American Poultry Journal.

EDGAR G. SIMPSON :: :: :: :: :: NAPERVILLE, ILLINOIS

Canada's Best R. C. and S. C. Black Minorcas

Winners of the red and blue at the largest shows on the continent. We won at the last Ontario Provincial Winter Show at Guelph, December, 1909. Canada's greatest show. Cock, 1st and 2d; hen, 3d and 5th; cockerel, 1st and 3rd; pullet, 2d and 3rd and special for best collection. We bred and raised the 1st S. C. chl. and 2d S. C. cock at Madison Square, New York, December, 1909; also 1st prize winners at the last Chicago and other large shows. If you want the strain that is bound to win, please let us hear from you.

Money in Poultry, \$3,600.00

NET PROFIT FROM 30 HENS IN ONE SEASON ON A LOT 24x40. IT IS NOT AN EXPERIMENT, IT HAS BEEN DONE ON THE **Kellerstrass Farm**

My New Poultry Book

Covers all branches necessary for Success with Poultry. It tells you what I have done. It was written from actual experience.

IT TELLS YOU HOW—

HOW I made \$3,600.00 in one season from thirty hens on a lot 24x40 by feeding them the scraps from my table three times a day. The test was made to show what can be done on a city lot as well as on a farm. I also furnish you the names of the parties who paid me over \$2,000.00 for the eggs alone from these thirty hens, for reference, which is evidence undisputable. Remember this book is written by a man who has had the actual experience.

HOW I make my chickens weigh two and one-half pounds when they are eight weeks old.

HOW I prepared my chickens for the show room so that I won over 90 per cent of all the blue ribbons that were offered during 1907 and 1908, the last season that I showed. A "secret" that has never been published before.

HOW I built my indoor and outdoor brooders for 85 cents each, to be used either as fireless or with heat in them and plans for the same.

HOW I raise ninety-eight chickens out of a hundred that I hatch.

IF YOU RAISE CHICKENS OF ANY KIND YOU NEED THIS BOOK

HOW I took a flock of chickens and made them lay \$68 worth of eggs per hen in ten months!

HOW I keep my male birds from fighting without injuring them.

HOW I raised the five chickens I sold to Madame Paderewski for \$7,500.00.

HOW I feed my chickens for egg production.

HOW I keep my chickens healthy and free from sickness.

HOW I select a good laying hen from the poor layer.

HOW I break up my broody hens without injuring them.

HOW I pack my eggs so they will stay fresh.

HOW I mate up my chickens for breeding and fertility.

HOW I run my incubators and supply moisture.

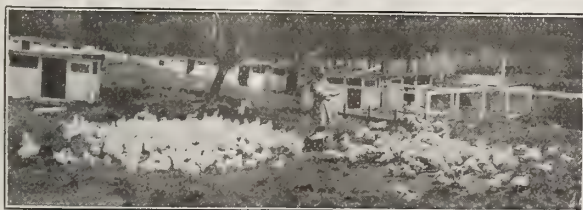

HOW I raised my famous \$10,000.00 hen "Peggy."

HOW I build my hen houses and plans for the same.

HOW I bred my big egg-laying strain.

It also tells about broiler plants, egg plants, and remember, there is also an article in this book called "Two Years on the Kellerstrass Poultry Farm," which explains hundreds of things—just what we do in two years on the farm, or in other words, a two years' course on the "World's Greatest Poultry Plant." This is the greatest article ever written by a real practical poultryman.

Remember, this book was written by a man who has sold the highest priced chickens in the world, who also sold \$68.00 worth of eggs per hen from a flock of hens in one season, in fact, if you breed a chicken of any kind you know my reputation as a breeder. This is the first time I have ever offered to sell any of my "methods or secrets" to the breeder or to the public.

Try My Way and You Can Raise Them by the Thousands

READ WHAT OTHERS SAY

Ernest Kellerstrass, Kansas City, Mo.

Dear Sir:—I herewith enclose you affidavit; also trap nest record of the Kellerstrass Strain Crystal White Orpington hen, register No. 503, that laid two hundred and sixty-three (263) eggs in 272 days.

(Signed) P. J. HARLLEE,
Chattahoochee, Ga.

August 8, 1909.

Ernest Kellerstrass, Kansas City, Mo.

Dear Sir:—Congratulations on the splendid showing you have made by selling \$68.00 worth of eggs per hen from thirty hens in one season.

G. M. CURTIS, Editor Reliable Poultry Journal,
Quincy, Ill.

My Dear Mr. Kellerstrass:

I have sixteen of your hens that average two hundred and thirty-one (231) eggs per bird in 12 months.

LAWRENCE JACKSON,
Pittsburg, Pa.

July 19, 1909.

The simplest sort of a thing—common black dirt—has solved the problem of eradicating a chicken disease which cost thirty million chicks' lives annually, a disease which scientists of the National and State Experimental Stations have been studying without success for ten years. Ernest Kellerstrass, the Kansas City poultry fancier, found the secret.—St. Louis Republic.

May 23, 1909.

The remarkable hen "Peggy" is owned by Mr. Ernest Kellerstrass, of Kansas City, Mo. She had traveled all over the globe capturing prizes. Mr. Kellerstrass has forty-eight hundred chickens

of this family and Peggy is the most perfect. He controls the output of perfect Orpingtons.—Sunday Chicago American, March 19, 1909.

Mr. Kellerstrass is now easily one of the leading and most successful breeders in America, and perhaps during the past two or three years raised more good prize-winning birds on his farm, devoted exclusively to White Orpingtons, than any other breeder on this continent.—Poultry Success, Springfield, Ohio, February, 1909.

The White Orpingtons began their real history in the American fancy when Mr. Ernest Kellerstrass took them up. Mr. Kellerstrass has done for this variety and for the breed of Orpingtons in general what no other man has ever accomplished for any other breed.—American Poultry Journal, Chicago, Ill.

It was a rare treat to spend a day in September at the Kellerstrass Farm, where were originated the Crystal White Orpingtons, now famous the world over. Mr. Kellerstrass himself does the work of a half dozen expert poultrymen and does it right. Mr. Kellerstrass exhibited upwards of \$25,000 worth of birds at the Chicago Show.—Western Poultry Journal, Cedar Rapids, Ia.

Mr. Kellerstrass has taken the chicken business out of the kindergarten class, and has done more to encourage the poultry business than any ten breeders in the United States combined. The Kellerstrass Farm won over 90 per cent of all premiums offered. We doubt if any breeder in the world ever sold stock or eggs that produced as many winnings in one season as the Kellerstrass Farm did in 1908. The Inland Poultry Journal takes its hat off to men of this kind.—Judge Theo. Hughes, Editor Inland Poultry Journal, Indianapolis, Ind.

Mr. Ernest Kellerstrass, of Kansas City, Mo., is the owner of the most perfect fowl in the world, according to the National Poultry Association of America.—New York Herald, March 15, 1908.

"Peggy," the \$10,000 hen owned by the Kellerstrass Farm, was viewed by over half a million people around the southern circuit of State Fairs, which included Nashville, Memphis and Atlanta.—Southern Poultry Magazine, Nashville, Tenn., December, 1908.

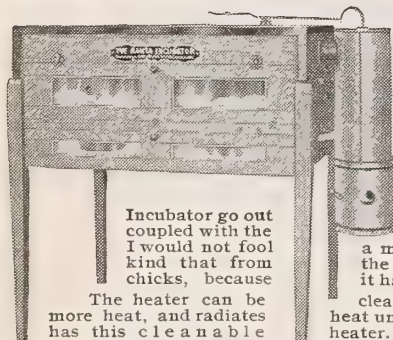

Send \$1.00—and a Copy of the Latest Revised Edition of the Book Will be Sent You by Return Mail

Address **ERNEST KELLERSTRASS, Publisher, R. F. D. 1, Box 98, Kansas City, Mo.**

NOTE: Ask any editor of any Poultry Journal or any "licensed" poultry judge as to my reputation as a breeder.

BANTA

Incubator go out coupled with the I would not fool kind that from chicks, because

The heater can be more heat, and radiates has this cleanable

The cloth diaphragms work of the most lasting kind. They retain heat even better than a fireless cooker.

No change in egg trays is necessary for duck, goose or turkey eggs. The regulator is simple and sure in operation. We guarantee it.

The large nursery under the egg trays is provided with doors and a drawer so that chicks may be removed from the Incubator without in any way interfering with the hatching of other eggs.

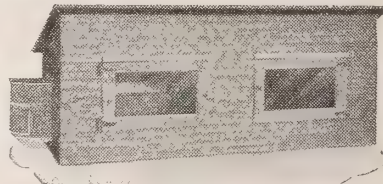

We could go on telling you many other points about Banta Incubators. Send for my catalogue and you will understand better why I am proud of my Incubator and why I can guarantee it to hatch so well, last so long, and give such delight. It is a book worth your time to read. Send for it to-day. Address as below. I will get it because I give my entire personal attention to all Incubator and Brooder business.

That is my name, and I am proud of it. It is also the name I have given my Incubators and Brooders, and I am proud of them, too. There are many generations of Banta's with reputations for honest, square dealing, and there is now a 17 years' enviable record back of my Incubators and Brooders.

I honestly believe there are more Banta Incubators that have been in successful use five—six—seven—and more years than any other machine, regardless of price. Some cheap machines are useless before the end of the first season—or even the first hatch. These are expensively "cheap." I never let a Banta Incubator go out of my factory that I know will not last even longer than the brash claims made by some manufacturers—never let a Banta that is not as nearly perfect as Knowledge, Experience and Material can make it, when desire to make an Incubator that will hatch each fertile egg into a strong, healthy chick. a minute with an Incubator that hatched eggs and that was all—the chicks must be the very start can be developed into prize winners. The Banta Incubator will hatch strong it has points of exclusive prominence:

cleaned if you should turn up your lamp high enough to smoke. A heater filled with soot requires heat unevenly—increasing cost to operate and possibly killing your hatch. No other Incubator heater.

are removable for cleaning. The frames for these cloths are mortised and tenoned—strictly cabinet The top has thirteen thicknesses of packing and lumber; the double walls five (5), with enclosed air space. a fireless cooker. The doors always shut air-tight against a jamb.

THE BANTA-BENDER CO., Dept. C, Ligonier, Indiana.

"SURE AS SHOOTING" NO SURVIVORS

Try **LAMBERT'S First**
—**EXPERIMENT Later,**
If You Want To

harm not only feathers and plumage, but the greatest number of them are blood-suckers and live upon and under the skin, causing irritation, restlessness—and then disease—and then (!)—**lost profits is the only answer.**

There isn't any experiment in Lambert's "Death to Lice." It's "sure as shooting," and it's been sure for over a quarter of a century. It has made more profits for more Poultry-raisers than any other single agent. Unless you go after the 30 different kinds of lice that infest poultry—with the remedy that is sure and speedy—they will get a start that will make your poultry business look so sick you won't know it. These pests

LAMBERT'S DEATH TO LICE

POWDER OINTMENT LIQUID

Kills every one of the 30 Different Kinds of Lice—No one Remedy will kill all—
These three will—Absolutely

THE POWDER kills all body lice on sitting hens, laying hens and exhibition stock. It kills the lice quickly, and positively does not injure eggs or chickens or soil the plumage in any way. Price, 5-oz. box, 10c; 15-oz., 25c; 48-oz., 50c; 100-oz., \$1.00.

THE OINTMENT kills all head lice—the pests that live on the heads of the little chicks and cause the big death loss among them. Is also good for Scaly Shanks—a parasitic trouble—and to prevent Gapes. Price, 10c and 25c per box, postpaid.

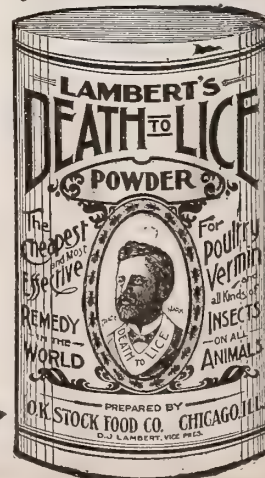

THE LIQUID kills all mites and spider lice in the Hen House. Spray it around the nests, roosts and into every crack and crevice of the house. It is also a great disinfectant and deodorizer. Price, 1 Qt., 35c; 2 Qts., 60c; 4 Qts., \$1.00.

You will not only rid your hens, but your horses, dogs, cattle, sheep and swine of these profit-killing pests by using these long-tried, thoroughly tested standard preparations.

Our New Poultry Book

ORIGIN AND HISTORY OF ALL BREEDS OF POULTRY

This Book Gives a Complete History and the Origin of all the Recognized Varieties of Chickens, Ducks, Geese and Turkeys, and is

Illustrated With 198 Colored Pictures of Fowls Painted From Life

SOMETHING NEVER BEFORE ATTEMPTED BY ANY PUBLISHER

This is, without question, the greatest book ever published on poultry. The artist's work alone on this book took almost one year's time to complete, but it shows the fowls in their natural colors and correct shape, and these colored pictures, together with the history of each variety, gives the fancier all the information to produce fowls for either exhibition or breeding.

How to Mate

This book also tells how to properly mate the different varieties of fowls to produce birds that will conform to Standard requirements. This is something that even the Standard of Perfection does not do. It tells you at a glance what it will take years of practical experience to learn. It is a book that no breeder or fancier can afford to be without, as it is just as suitable for the needs of the experienced fancier as for the amateur.

Price Only \$1.00

Sooner or Later You'll Own a Cyphers Incubator

YOU'RE bound to own a Cyphers—some day. Until you do, you will never know the real way to have success with chickens. The Cyphers is the *logical* incubator for the man or woman who is done "experimenting" with inferior hatchers.

For men and women who "mean business"—who want a *business* incubator, not a toy or plaything. But it's far better to own a Cyphers *first* than *last*.

For waiting costs you *many times* its price—in poor hatches and needless worry—in money spent for

One "Cheap" Incubator After Another

in moisture troubles, heat troubles, ventilation troubles.

The *saving* is all on the Cyphers' side! Yet the Cyphers is not the highest-priced incubator. It is the best incubator at *any* price. The Cyphers has been

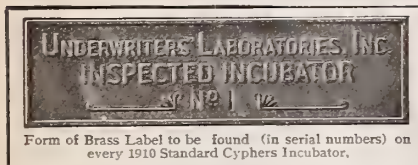

Accepted As Standard By The Leading Authorities

It is used by more Government Experiment Stations, by more large practical poultry plants, by more fanciers of national reputation, by more successful duck farmers—than all other makes combined.

It is used by money-making marketers of eggs and poultry; by farmers and farmers' wives; by old-timers and beginners.

Don't think that you must be a *big* poultryman to require a Cyphers.

Don't think that it doesn't mean economy for you—that it won't repay its purchase, over and over, even if your business is *small*.

The splendid construction of the Cyphers—its absolute safety—sets it apart from common incubators.

We Pay \$10 to \$20 More

per thousand feet for wood than we would have to pay for ordinary incubator lumber.

We get best quality Michigan White Pine—light, workable; the best resistant to heat and moisture.

We pack the double walls and top of the

Standard Cyphers with the best, most expensive non-conductive materials. That's why Standard Cyphers Incubators will run in an apartment that is 20 to 30% colder than the ordinary incubator can stand.

The Cyphers is a Hot-Air Machine

That means no tanks to rust, corrode and spring a leak—also more even temperature, and full protection for the eggs.

The patented Diffusive principle applies the heat gently and evenly through porous diaphragms, diffuses and draws it out through a lower set of diaphragms. No air currents or direct draft to chill the eggs.

The Standard Cyphers is a genuine non-moisture incubator suited to all climates. It is self-ventilating and self-regulating.

10 Minutes a Day

is all the attention it requires

The Cyphers is the only incubator with a patented drop bottom—a frame with a hinged bottom that can be lowered, giving additional ventilation to heating chamber and nursery apartment—in summer weather, in warm quarters and in tropical climates.

Cyphers Incubators Nos. 2 and 3 have special nursery drawers for removing chicks or ducklings without exposing the rest of the hatch.

The Cyphers \$40,000 Experimental, Demonstration and Commercial Poultry Plant, in the suburbs of Buffalo, is where we test-out fully every improvement added to the Cyphers.

Eight popular varieties of standard chickens and ducks are bred by us. Hatching eggs and day-old chicks for sale.

The Cyphers Were the First Labeled Insurable Incubators

The first to be perfected and safeguarded in heater, lamp and general construction, to conform to the rigid "Rules and Requirements" of the National Board of Fire Underwriters—the first to be examined, tested, and officially labeled by the insurance engineers.

Every Cyphers machine bears the serial number inspection label of the Associated Fire Insurance Companies of the U. S. and Canada.

Every Cyphers Incubator is warranted for 10 years without repairs, if ordinary good care is taken.

Use a Cyphers for Four Hatches At Our Risk

We guarantee Cyphers Incubators to *YOU* personally—to satisfy you—to bring out a larger percentage of the fertile eggs in larger,

healthier chicks or ducklings than any other style or make of incubator.

We want to send you our big 160-page Cyphers Catalog for 1910. It fully describes Cyphers Incubators and Brooders, from "popular sizes" up to Cyphers Mammoth 6,000 to 50,000-egg machines, and "The Cyphers Way" poultry-plant equipments; tells all about our newly patented Electrical Incubators and Brooders, and the 70-odd valuable poultry specialties which we manufacture. It tells exactly what the big State Experiment Stations, Agricultural Colleges and leading poultry-raisers say about the Cyphers—all letters *signed and dated*.

Just fill out the coupon, mail it to us today, and we will send our big catalog and Poultryman's Guide *free* and postpaid.

COUPON FOR YOUR CONVENIENCE

Cyphers Incubator Company
Dept. 30, Buffalo, N. Y.

Gentlemen:—I am interested in an incubator of about _____ size.

(Or) in an (Outdoor) (Indoor) Brooder of about _____ size.

Please send your 1910 Catalog without obligation to me

You Owe Your Chicks a Cyphers Brooder

CHICKS hatched in a Cyphers Incubator are bright, healthy, hardy. But they need a home in which to thrive and develop, that's equal to the one they've left. When we set out to make Cyphers Brooders we realized that they had to be in every way

Fit Companions for the "World's Standard Hatchers"

Cyphers Brooders are the best designed, most durable, most convenient indoor and outdoor individual brooding devices ever placed on the market.

We realized that to save a dollar or two on the purchase price we would have to deprive them of values that are essential to the success of the chicken-raiser.

We didn't do it.

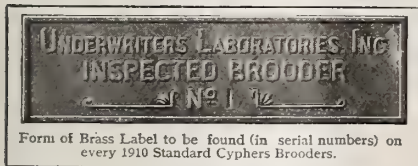

Fire-Proof and Insurable

Cyphers Insurable Brooders, both Indoor and Outdoor, can be used anywhere at reduced rates by sanction of the Fire Insurance Companies and without danger to life or property.

And that's a lot to say of a brooder.

Every Cyphers Brooder bears the Fire Underwriters' Serial Number Insurance Label.

We fully decided last year when we were bringing Standard Cyphers Brooders up to the point where they would receive—as they did—the *first* Insurable Label awarded by the Fire Underwriters' that we would not stop at *anything* to make them perfect.

It's an interesting fact that the Underwriters themselves looked with disfavor on the recognition of *any* brooder. They frankly stated that they thought *no* brooder could meet their specifications.

We told the Underwriters to proceed to make their requirements as hard and exacting as they liked—then to put it up to us to

prove whether or not we could meet them.

This they did, and the fact that Cyphers Brooders *went through* and received the first Insurable Label ever awarded to a brooder is complete proof of how carefully they were made—how every possible danger is provided against.

An Adaptable Hover—self-ventilating and self-regulating—every one bearing the Fire Underwriters' "Inspected Brooder Label"—is used in each of the 4 styles of 1909-1910 Cyphers Brooders.

It is constructed entirely of non-combustible materials.

Ventilation in Cyphers Brooders is automatic.

There is no chance of the lamp going out if the door is left open to Brooder or poultry-house in which Adaptable Hover is used.

Our insurable oil-heated Brooders have a heater which is

A Special Cyphers Invention

It is constructed entirely of non-combustible materials, and so perfectly encloses the lamp-box chamber that it could be operated without danger of fire if placed in a kindling-wood box filled with shavings.

The openings, in the lamp chamber are screened with fine meshed wire-cloth, through which flames or sparks cannot pass.

The lamp chamber has a wall of extra thick galvanized iron.

All joints and connections are metal—fire-proof and spark-proof.

You cannot put the lamp in any way but the right way.

It stands to reason that

An Insurable Brooder Must Be a Good Brooder

Cyphers Brooders are as scientifically correct as Cyphers Incubators. They provide, in every way, for the comfort, health and safety of the chicks.

Chicago, Ill.

Boston, Mass.

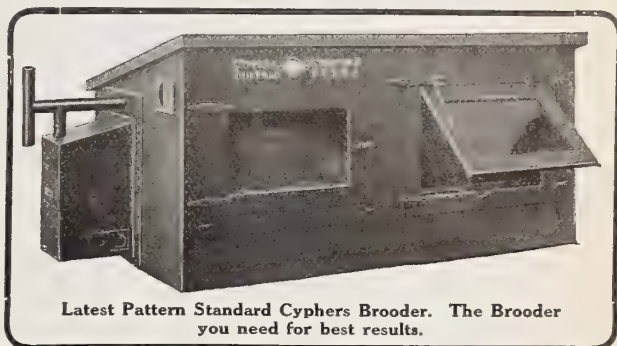

Kansas City, Mo.

Oakland, Cal.

The prices of Cyphers Brooders are right—never more than is represented in full value.

The *greatest* value ever offered in a Brooder.

Just another proof of the "up-to-dateness" of Cyphers ideas and methods is our

splendid success with Electrically Heated and Lighted Hatchers and Brooders.

Hatching Chickens by Electricity

We have originated and patented new devices along these lines which are practical and economical and can be used wherever a constant current of electricity is obtainable for ordinary lighting. Just unscrew the glass bulb, attach our cord and you're well started.

The Cyphers Information Bureau

The Cyphers Company wants to help with advice and suggestions every one who is really interested in making more money—getting better results—with poultry.

Whether or not you own a Cyphers Incubator or Brooder this service is open to you—free of all charges.

We want to send you our new and handsome 1910 Catalog, described on opposite page. Use the coupon printed there, and send for it *today*.

MORE PROFITS ON HOGS

My friend:—Have you hogs? Will you accept \$100 extra for feeding them?

Jones fed his hogs the same amount of corn that Smith did. Jones made his gain from 160 to 260 pounds. At 7½ cents a pound this made \$2.25 difference per hog that Smith got out of his feeding over what Jones did, just because Jones did not know how. He was not progressive and Smith was.

Jones' 50 hogs brought him \$975, while Smith's 50 hogs brought \$1,087.50. Smith's knowledge therefore was worth to him \$112.50. It shows that knowing how makes success not only for the farmer as well as the lawyer and banker; it enables them all to make money. This tip ought to be worth something to you; some will make it worth \$100 this fall.

It isn't what the hog eats; it is what he digests that makes the money. Experience is our best teacher. We are all in a school, learning. We could preach you a great sermon on this; but you have no time for words or arguments. You want quick money. It costs the man who first proves an undiscovered fact (which, of course, always existed), but the man doing so is a benefactor as well as an educator of his fellow-farmer.

The principal cost of producing pork is the feed. Prof. Dietrich says "90 per cent of the farmers have nearly everything to learn about how to feed a hog to get the most out of him at the least cost." We can help every one who will be helped to progress; the others will continue to lose the hundred dollars a year.

"For \$1 we will send you the American Swineherd, the aggressive and progressive acknowledged leader, devoted to the swine industry, for 4 years, and will give you as a premium the Progressive, Scientific Feeding Formula for increasing the gain while feeding, fattening hogs, a half pound a day per hog over the customary way of feeding from the same feed given. This hygienic secret made the discoverer a fortune fattening hogs.

It is simple, sensible and just as easy feeding as the old way. Yet it is progressive and scientific. It is of such real value that no sensible man can ignore it. It has been proved so conclusively and repeatedly that we have an abiding faith in it and agree to make good or give money back, making you absolutely safe.

This fair offer is good for 10 days.

We also give additional premium, copy of the Pig Feeder's Manual, itself worth double to any hog raiser what you pay us. The paper stops at the time paid to.

Address, with \$1,

Roseland Poultry Farm Chas. W. Switzer South Euclid, Ohio
Owner-Manager

Mr. D. J. LAMBERT, Professor of Poultry Culture
at Rhode Island State College, Kingston, R. I., says:

Permit me to say that I never hesitate to recommend **Farm-Poultry** to any one inquiring about poultry papers. I have long admired your editorial policy, and believe that you present facts as you see them, without fear or favor. Of course we appreciate every good word you say for the Agricultural Schools, and think that you recognize the poultry schools as one of the trio of forces that is helping to increase the welfare of this industry. The poultry press and the shows the other two. D. J. LAMBERT.

When a poultry publication is recommended by the foremost poultry instructors of the times you can safely pin your faith to that paper. For twenty years **Farm-Poultry** has been teaching everything that is sane and trustworthy about incubating, brooding, rearing, feeding, mating, housing, exhibiting, killing, dressing, marketing, etc., of poultry. Full show reports is a feature, and as Mr. Lambert says, its editorial policy is "without fear or favor." **Farm-Poultry** is a monthly, fifty cents a year. Sample copy sent free on request.

*Coleman's***EUREKA TONIC
AND ROUP TABLETS***Coleman's*

The greatest discovery of the age in the poultry remedy line. These tablets are positively guaranteed to cure roup and colds, will build up the fowl's system, guaranteed to prevent the loss of birds due to the exposure and disease contracted in the show room, will put the fowls in the finest possible condition for exhibition. No matter what the disease Eureka Tablets will save your birds.

Don't take our word for it, but read the following unsolicited testimonials from the greatest authorities in the country:

Loring Brown, eminent poultry judge and manager of Belmont Farm, Smyrna, Ga., the South's largest poultry farm, writes: "Please send the tablets by return mail. I have lost no less than \$200.00 worth of birds by not having your valuable remedy."

Dr. S. R. Harrison, Shelby, Ohio, writes: "Your tablets have saved birds for me that were more than half dead. I cannot find words to speak too highly of this wonderful remedy."

T. N. Davis, Wholesale Grocer, Topeka, Kansas, writes: "I have tried about all Roup cures but I find that none of them are of much force but yours, and it is a truly ROUP CURE, so please find enclosed one dollar (\$1.00) for which send me five (5) boxes of your tablets."

What more proofs of the wonderful power of this remedy could be asked for?

H. B. Hark, manager of the Hartman Stock Farm Poultry Yards, Columbus, Ohio, the world's largest poultry farm, writes: "They are the very best thing I have ever tried to put a bird that is out of condition into good shape quick. At the Kentucky State Fair a friend came to me with a cockerel that was all in, could not hold up his head. I gave him two of your pink pills. The next morning he stood up like a fighting cock and took one of the first prizes."

Write today. A liberal sample box will be sent for stamp, or better still, send 25 cents for a full size box containing 65 tablets, postpaid, or 5 boxes for \$1.00. Please mention American Poultry Journal when writing.

PETERSEN'S HOUDANS

THE UNDEFEATED
CHAMPION STRAIN
OF AMERICA

¶ Winners of blue ribbons, silver challenge cups, medals, gold specials and many other coveted honors at every noted show in the country and in the strongest possible competition. ¶ REMEMBER, no matter where you want to show, no matter what the competition, we can furnish the winners. ¶ Send for 80-page fully illustrated book on the Houdan. It gives full descriptive matters on the Houdan. "It will put you wise." Postage twenty cents. Please mention American Poultry Journal when writing.

REV. C. E. PETERSEN Pres't Am. Houdan Club from 1900 to 1907 **BRIDGTON, MAINE**

Crescent Poultry Farm, Frank Foy, Prop., Des Moines, Iowa

Foy's Big Book---Money in Poultry and Squabs

Describes and illustrates all the leading varieties of pure bred fowls and Homer Pigeons for squab raising. Tells you all about how to raise poultry for profit, how to feed and mate, all about diseases and remedies and a great mass of useful information. Gives plans for building poultry houses, describes and illustrates the best incubators and brooders and the famous Crescent Poultry Farm, which is the largest poultry farm in this country devoted exclusively to the rearing of pure bred poultry and pigeons. IMPORTANT ADVICE—Tells you how to start the business in a small way and grow big. My specialties are thoroughbred fowls of a high quality, and Homer Pigeons for raising squabs. I can supply eggs for hatching from all leading varieties by the single setting or in large lots for incubators. My prices are low. The quality is high. All who want to keep posted in the poultry business, or contemplate purchasing anything in the above line, should send for this book. Mailed to any address for 4c in stamps. Write your wants; mention A. P. J.

Single and Rose Comb Buff Leghorns

MADE THE WORLD'S GREATEST SHOW RECORD

Unequalled and unapproached by any Buff Leghorn breeder—was that made at Chicago, December 7 to 12th, 1909, by the Tecktonius Single and Rose Comb Buff Leghorns. At this great exhibition of the biggest and most superior class of these magnificent birds ever shown under one roof, in the history of the United States, the Tecktonius Single and Rose Comb Buffs took high honors in sixteen out of eighteen entries as follows:

Single Comb—1st pen, 1st and 2d hen, 1st and 5th pullet, 2d and 4th cockerel, 4th cock

Rose Comb—1st pen, 1st and 2d cock, 1st and 2d hen, 2d and 4th pullet, 3d cockerel

Also the Tecktonius Buffs won the silver cup and silver set—and the special for best shape and best colored female offered by the American Buff Leghorn Club. Truly, "honor enough"—for the world's best strain of the "best general purpose fowl on earth" to satisfy even the ambition of the breeder of these distinctive birds.

Tecktonius Buffs--The "Quality" Leghorn

—have proven by test to be the best general purpose fowl on earth, because they are light eaters, healthy, hardy and large Winter egg producers, choice eating, handsome, attractive birds—every inch of them.

My Success Buff Leghorn Book

My beautiful, illustrated 8x11, 32-page catalogue, with art colored cover design, contains color plate insert of a pair of Buff Leghorns (suitable for framing) showing true color and shape to breed to. This book covers every feature of the poultry business, especially the feeding, breeding, mating, conditioning and care of Buff Leghorns—also covers the diagnosis of diseases common to poultry and a specific cure for same. This magnificent catalogue will be mailed to any part of the United States or Canada, upon receipt of twenty-five cents, coin or stamps. Your money back, if not pleased.

RACINE, WISCONSIN

Bie's Barred Plymouth Rocks

Winners Wherever Shown. Winning at Chicago, Milwaukee, Kenosha

At Chicago in the strongest competition west of New York City, on one entry I won third pen, one of the three most coveted prizes.

At Milwaukee, 1910: On pullets, 1, 2, 4, 6, 7, 9, 10; hens, 2, 3, 4; cockerels, 3, 4, 7; pens, 1, 3; special for best display Barred Rocks: special for best cockerel and pullet; special for best pen; in fact, all specials but one.

At Kenosha, Wisconsin—One of Southern Wisconsin's best shows, I won 1st, 2d, 3d and 4th pullet, 1st, 3d and 4th cockerel and 1st pen.

A grand lot of pullets and pullet-breeding cockerels for sale at prices that are right for quality. All customers have to be satisfied or it is no sale. I will pay return express charges on any bird that is not satisfactory and refund the purchase price in full. **Thirteen years of line breeding** have put my birds in the front rank. My matings for 1910 will comprise all my 1909 and 1910 winners and birds of their equal. Eggs at \$5 and \$8 per setting. Please mention this paper when writing.

KAUFMANN & WINDHEIM'S FAMOUS "AMERICAN BEAUTY STRAIN" OF ROSE COMB RHODE ISLAND REDS

"HOLD THE WORLD'S SHOW RECORD"

Our record for the past three years at twenty-three of the best shows held in America stands unequalled. No record held by any breeder in this country can compare with it. Exhibiting thirty times, not only in one section or under one or two judges, but going from coast to coast and under twenty-four different judges, this record was obtained. Exhibiting at Madison Square Garden, Boston, Chicago, Indianapolis, the Jamestown Exposition, Washington, St. Louis, Augusta, Scranton, Allentown, Nashville, Paterson, Trenton, Richmond Hill, Newark, Orange, Morristown, Dover, Ruth-erford, Englewood, Montclair, Sacramento, Cal. and the Alaska-Yukon-Pacific Exposition, winning more first prizes than all other Rose Comb Red exhibitors combined, proves that the American Beauty Strain stands in a class by itself. We have also furnished for years first prize winners at the big shows—East, West, North and South, and today hundreds of Red men are exhibiting and breeding our strain.

If you are in the market for eggs that will hatch out winners for any show, write today for our handsome catalogue, showing photos and records of the winners that are in our pens this season. Compare us with the others—then judge for yourself. We have the quality, our prices are honest, and as for our reliability, ask any poultryman or judge in the country.

Kaufmann & Windheim, Originators - The Largest Exhibitors of Reds in America - Nutley, New Jersey

Giant Bronze Turkeys .. Best .. America's Part. Wyandottes

At the great Madison Square Garden Shows of 1907-8-9-10 our Bronze Turkeys and Partridge Wyandottes won a total of twice as many premiums and twice as many points as any competitor. At the above 1910 show our birds won more premiums and more points than all competitors combined. The choicest turkeys and Wyandottes we ever raised for sale now. Remember, all stock found not as represented may be returned at our expense and your money will be cheerfully refunded. All birds farm raised; vigorous and unexcelled for utility purposes. Write what you want; we'll try to please you.

BIRD BROS. : BOX C : MEYERSDALE, PENNA.

BUFF AND CRYSTAL WHITE ORPINGTONS Largest Winners at Chicago Show. On thirteen entries we won eight prizes and silver cup. No other breeders equaled this record. Stock for sale. Send for catalogue. We ship on approval. Large early cockerels a specialty.

SYNOPSIS OF THE HOOVER BARRED ROCKS

Line-Breeding One of the Most Essentials—A Good Start Important.

Written for American Poultry Journal by William H. Hoover, Polo, Ill.

SIXTEEN years ago this spring my father-in-law gave us a pen of Barred Plymouth Rocks, a cockerel and four pullets. They were the best obtainable at that time, he having won the blue with this line at most of the best state fairs and poultry shows of that date. We were breeding Black Langshans at the time and father remarked as he gave us the Rocks: "Now keep in mind these are Barred Rocks, not Black Langshans, and if you succeed in making an improvement in these birds each year greater care must be practiced than with any other variety I know of. You must breed in line and stick close to it. Don't believe folks when they tell you your flock will deteriorate by line breeding, for if plenty of common sense is used in selecting the good qualities are just as easily bred in a strain of poultry as in other lines of farm stock. Cull freely each fall, breed only the best, even if fewer in number, and your flock will be a little better each season. I will tell you and show you all I can and shall expect you to be shortly raising better Barred Rocks than I can."

That first year we raised about eighty-five chicks from the pen of five, and as we had been "shown how" we the next year selected eight of the finest pullets and mated them with their sire, and the four hens were yarded with the best young cockerel. We raised enough from these two pens so that after culling for market and selecting enough for three yards there remained plenty for our range yard, and the Black Langshans were confined in a yard. At this time we sold out our surplus stock to farmers, where we found the demand unlimited for Barred Rocks of good size and "good lookers," and occasionally selling some of the best specimens to fall fair exhibitors. Later on it became known amongst the large breeders of several varieties, called Hucksters nowadays, that the Hoovers had a string of Barred Rocks that could be relied on to give satisfaction, and we were in time overwhelmed with this demand, never being able to meet it.

This brings us up to six years ago, when we still had the three select yards from which we aimed to raise about all our own breeding stock for the following season, and if new blood was required father supplied it. At this time our town held its first poultry show, which has since occurred annually, and has become known as the quality show of the state. Of course our Barred Rocks went to the show, and they won four out of the five possible first, best display, best three, best pair.

The following year enthusiasm was great at the Polo show, sixty-nine Barred Rock cockerels in competition. The other fellow had sent east and got a high-priced pen. I determined not to eat crow, so I bought a Chicago winner and won first cockerel, first cock and others. Now this transaction convinced us about the scarcity and value of real good exhibition specimens of Barred Rocks, and we then and there resolved to produce this quality for ourselves and for others. How well we have succeeded our show record since then shows, and birds that we send out are winning at many of the best shows.

The cockerel which I bought I named Teddy (the original), and he was the best investment I ever made in the poultry business, although many considered me as a fool at the time. Mated with our best dark females his progeny was exceptionally fine, large and vigorous, combining all the good qualities of both sides with the beautiful deep barring in all sections.

We have not since then had any other cockerel blood worth mentioning in our yards, which now are twelve in number.

There are a few all around fundamental principles which we stick close to in mating which are applicable in both light and dark matings with us. The shape must be good in both males and females. In pullet matings, as well as dark matings, we follow the Standard just as close as possible in this respect: They must all have low combs and good eyes and thick orange legs. The color for the different matings is not so easily chosen from the Standard, so our females in the cockerel matings are darker than Standard color, but they must have distinct snappy barring all through, black and white. We do not want any shading off into brown, and the wing must be distinctly barred clear across. I will not breed a pullet in my cockerel pens with solid colored flight feathers even if she came from generations of prize-winning cockerel yards, and there must not be any overabundance of black feathers, and a cockerel breeding pullet with a solid black streak running full length of the beak we will not use. There may be dark in the beak or shading from orange at the tip to dark at the face, and the young cockerels will in a large degree possess clear beaks at maturity, and we have taken such care in selecting all these years that we are now able to choose almost all these dark pullets for special matings, with as bright orange legs as is found in the pullet line. Mated with this pullet or female the Standard exhibition colored male produces exhibition males for the matings from which we produce our exhibition females. We mate the Standard colored females with a male descended from generations of winning females. He must be large, over Standard weight rather than under, strong orange legs. We do not tolerate a specimen in our yards with either willow white or ashy legs; must have a rich bay eye, and while the color is several shades lighter than Standard, he must be evenly and finely barred in all sections with especially good wings. We try to have each bird on the place, male and female, cockerel or pullet bred, even in the shade of color from head to tail. I will decrease my number of breeders before I will lower the quality. Still there are some things we have to choose between in mating pens, for instance: I would prefer a good low four-point comb of fine texture in the males to a large beefy thumb-marked five-pointed comb. Also I would show a preference to the fine-shaped, fine-barred cockerel with a light eye to the wishy-washy cockerel of good shape with a rich bay eye. Also if choosing between cockerels for cockerel pens, one being finely barred to the skin but a little metallic across kidneys and wing bows, the other with a clear surface but no under barring two or three inches from the skin, I should take the former, all other things being equal. And while we do not like a squatty nor a long-legged cockerel, if compelled to pick from the two would take the short cockerel in case of cockerel breeding, and the rangy cockerel in case of pullet breeding. Our chicks are all marked when hatched, and any time we pick them up we know where they came from, also what different birds they are apt to "nick in" good with in breeding. We cull freely in the fall, both males and females. These are sold to farmers. From those saved we early make selections while they are at range and are later on divided into lots rated as extra choice, choice and good.

We mate up our pens early in the season, and do not find any great difference in using cockerels and hens, cocks and hens or cockerels and pullets. Concerning the fertility of eggs: We think mating early insures fertile eggs, of course with good feed and care. We often see in print that the late cockerels are not good breeders, but a few times I have mated one of these late cockerels, which in the Barred Rocks are often exceptionally fine, with a few females of equal quality, and raised from this mating some of the very choicest specimens.

THE NEW YORK SHOW

THE twenty-first annual exhibition of the New York Poultry, Pigeon and Pet-Stock Association, held at Madison Square Garden, New York, December 28, 1909, to January 1, 1910—The mammoth old garden filled as it never was before—A record breaker in quality and in numbers, and without doubt the grandest and most beautiful and valuable display in the world's history. Reported by H. P. Schwab, Irondequoit, N. Y., Eastern Representative American Poultry Journal.

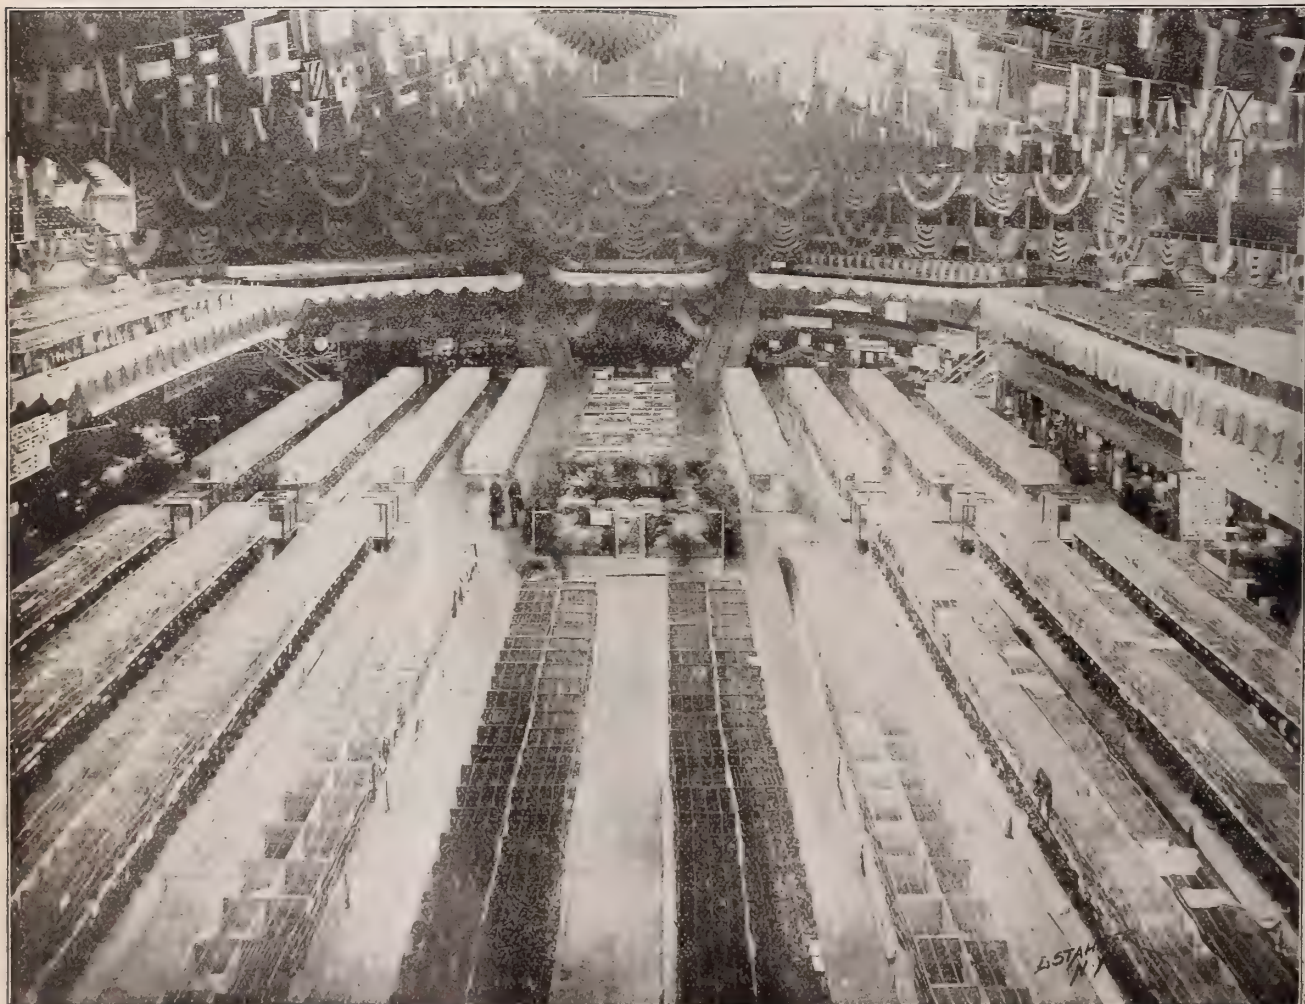

The New York Poultry, Pigeon and Pet-Stock Association is of age. It has held its 21st annual exhibition, and now as we stand beyond its 21st mile stone, and look back over its long path, we find its record clean cut and without a blemish for its entire length. Each show has made its mark and won its place in history as the foremost show of the year. Each show brought added features and enhanced the value of New York awards, that until today their real value to the winners in the leading classes in particular, they have an acknowledged value of thousands upon thousands of dollars.

It has taken just 21 years to make possible the exhibit just held—21 years of hard labor and devoted interests, backed by the loyal support of the breeders of this, the grandest continent the sun has shone on. The New York show has always been national in scope, and each year has

drawn entries from every section of this country, Canada and the Old World. Wherever a choice specimen has been bred, it has found its way to New York, for there and there alone its true value and merit could be tested. What the New York association has done for the standard bred poultry interests can only be vaguely estimated. New York has set the pace, and its exhibits, along with the value of the awards, has done more than any other one thing to benefit the standard interests, and to create the general

interest we find the world over today in poultry. Thousands upon thousands of people visit here yearly whose interests are tied to poultry, and thousands of others come to see, the illustrated lessons they here receive leading them to investigate poultry possibilities further and in this way adding untold numbers to the fancy yearly.

Mr. H. V. Crawford was at his best possible form. No one, to see this man at the show with 10,000 or more cares resting upon him, could believe it unless they knew the man. Every matter in detail has his care, his responsibilities are great, his work far greater. His say is law and his guiding hand is seen and noted in every section and department of this ponderous exhibit. No person can ever say that he has received injustice from Mr. Crawford; he has gathered and schooled his assistants so that when the machinery is once

TYPICAL PEN OF S. C. BUFF LEGHORNS.

set in motion it is bound to run smoothly and with all the force of man. He selects his judges, knows them, gives them his every confidence and backs them to the limit. In these and a thousand other ways his hand and character are seen, and all this is a part of the success he has made. New

W. W. KULP, POTTSTOWN, PA.

York's success and value to the fraternity is the work of Mr. H. V. Crawford.

The 1910 New York show was larger, better displayed, on account of the added space in the gallery, and of better quality as a whole, than ever before. This is but natural to expect when we consider the work the breeders are doing; competition is keen and dozens of breeders in all lines are fighting for supremacy. This warrants a good, healthy condition and assures progress and improvement, to be had in no other way. This year there were 2,958 single entries in the poultry classes, 275 exhibition pens of five birds each (1,375), 1,902 pigeons, 172 entries of pet-stock, 30 display pens, 120 entries fancy water fowls shown in the large tank, 185 cage birds and 223 cats, making a grand total of 7,282 entries.

Newspaper avenue and Incubator circle encircled the garden. All the heart could wish for was to be found here; the poultry press was grandly represented, as were all the incubator manufacturers and makers of poultry appliances. Several new inventions were seen here, and one of the most interesting displays was that of the New York State Poultry Institute, of Ithaca, N. Y.

The Breeders and the Birds.

Barred Rock avenue, as usual, was full of interest, and contained many attractive features. The great record here made by the Grove Hill Poultry Yards was one of the principal features and stands as a record to the ability of Messrs. William Ellery Bright and Arthur C. Smith. Their winnings of first, second and eighth cocks, third hen, first, sixth and seventh cockerel, third pen, specials for champion male, for four best males, for best shaped male, etc., made a record that is as clean cut as it is decisive at this great show. First and second cocks were a great pair, alike as could be and of the very choicest quality in both form and color. First cockerel was shown at his best, with ideal color and beautiful form—a most valuable bird. They also won on S. C. Brown Leghorns, first and second cocks, fifth hen, first and third cockerel and first pen, in a large and hot class. The merit of the Grove Hill line has been established by years of successive wins at the Garden shows, also at Boston, Chicago and the world's fairs.

Mr. A. C. Hawkins again sprang some surprises, and for the most part had them all in the air. His winnings were

fourth and fifth cock; second and fourth cockerel and first special for best cockerel mating pen. He also won specials for best headed male and best wing male, etc. Best headed male was awarded to fourth cock; he carries a wonderful head, with 5-point comb, perfect in form, and has a strong red eye. This whole male line carries extra fine head points. The second cockerel was a corker and only needs a week or two to show him at his best. His sixth pen was a beauty and would have stood much higher had not one of the pullets gone away off on condition. In the special first prize cockerel mating pen Mr. Hawkins has a beauty, with a strong, well-balanced male, and four strong, but clear and sharp, barred females, with most excellent forms and strong red eyes, making a pen of great merit and value.

The eyes of Barred-Rockdom looked with expectancy to Connecticut. C. H. Welles lives at Stratford in that state and the great question was, would the champion of them all, "Fluffy-Ruffles," again come to New York for more honors. Fate willed it otherwise; she moulted late and is still in short feather, so was left at home. Mr. Welles did come and bring some others, for it would hardly seem like the New York show without Charlie Welles as an exhibitor. He has shown there yearly for 15 or more years and we believe he still holds the best single record ever made on Barred Rocks at New York. This year he won seventh cock, fifth hen, third and eighth cockerel, first, fifth and sixth pullet and fourth pen, color special female, etc. First prize pullet bids more than fair to equal the record of her famous grand dam, "Fluffy-Ruffles." Her bar is some narrower as a pullet, and she has the same wonderful shade of color. Mr. Welles has other grand ones, but in her, with all considered, we believe he has again produced a bird that will for all time perpetuate his strain (Welleslea). Third cockerel should make a great breeder; his shape, with strength of color, bids fair for the future.

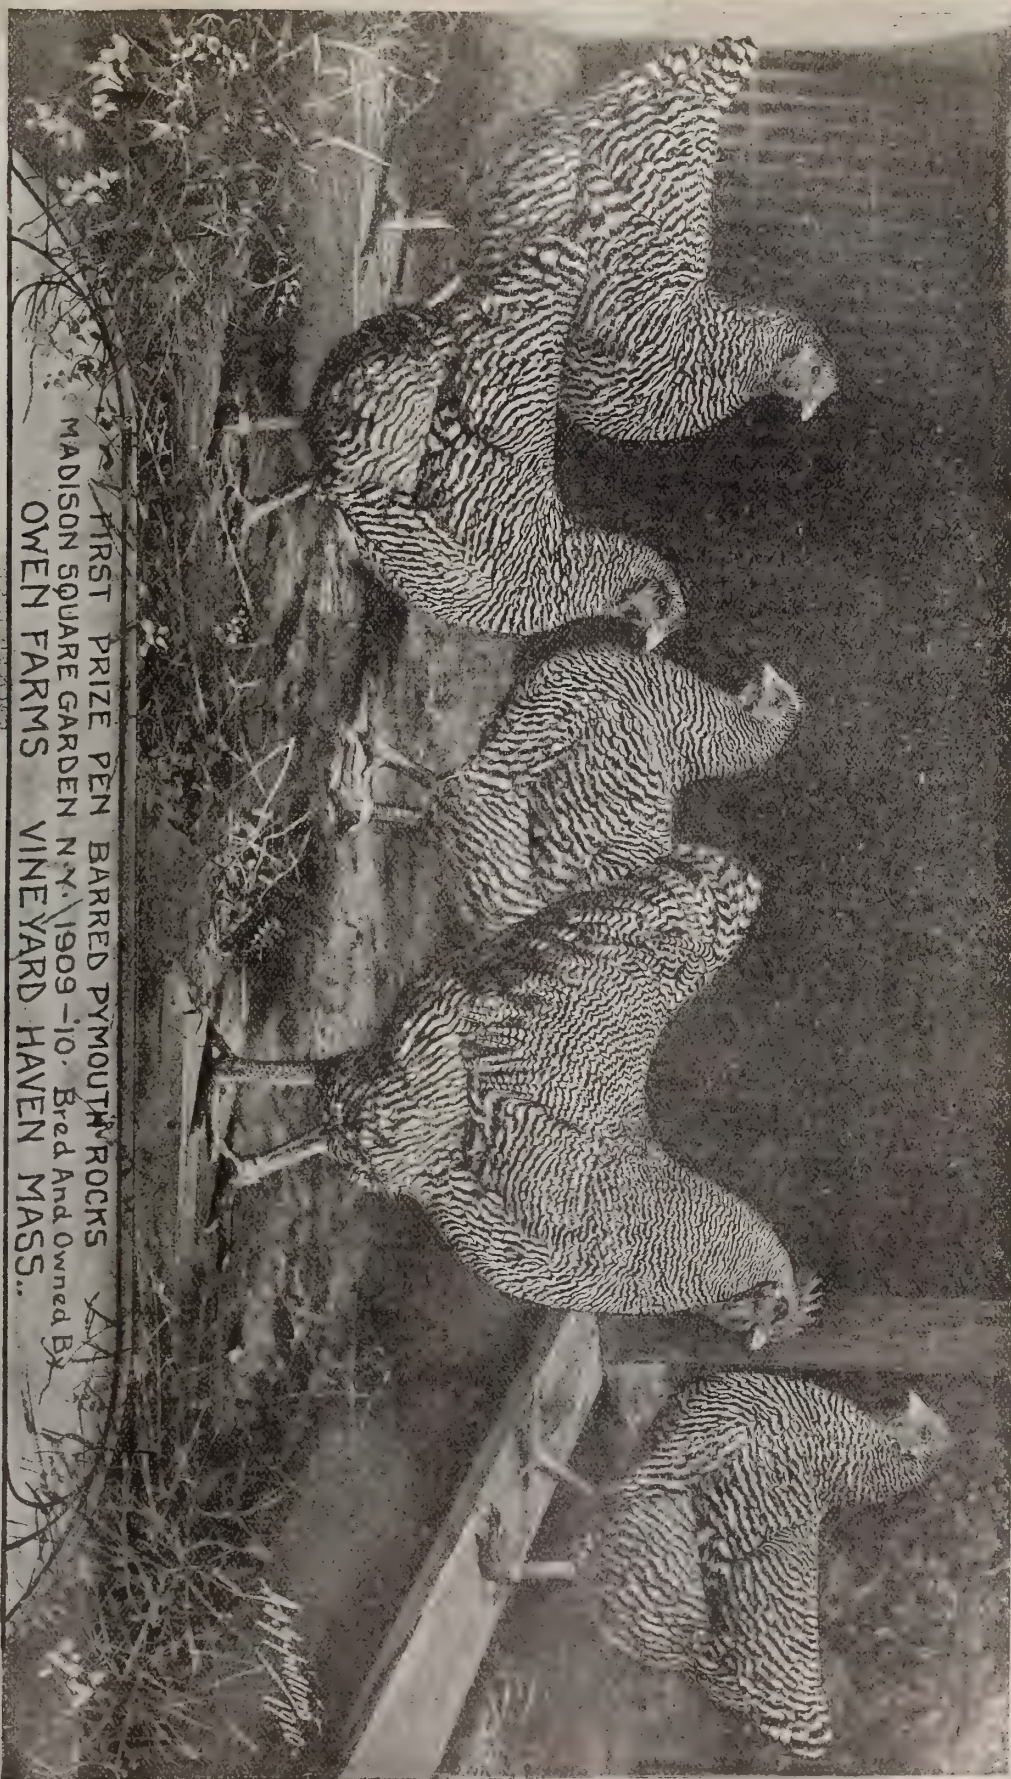

C. H. Latham, Lancaster, Mass., entered 4 hens, 4 pullets and 2 pens. His winnings were first and second hen, second and third pullet and second and fifth pens. Specials for

BARRED ROCK COCKEREL.

One of the Hoyer quality, never exhibited, but in one of his breeding pens this season. Bred and owned by William H. Hoyer, Polo, Ill.

champion female, shape female, etc. The female and pen classes were exceedingly strong, and considering this, Charlie Latham made a great record. His two winning hens were grand birds, shown in most excellent condition. The pullet class was just sizzling, and to win second and third here

FIRST PRIZE PEN BARRED PLYMOUTH ROCKS
MADISON SQUARE GARDEN N.Y. 1909-10. Bred And Owned By
OWEN FARMS VINEYARD HAVEN MASS.

First Prize on Exhibition Pen at New York Show seems to be about the most coveted of all the prizes by the management of Owen Farms. We have heard Mr. Delano, Supt., make this confession, and a glance at the show records will quickly prove to one that Mr. Delano usually gets what he goes after. At New York Show, held recently, Owen Farms, Vineyard Haven, Mass., won first prize pen on all four varieties they breed, which is surely very gratifying to them and must also prove a great deal to those who are producing quality Plymouth Rocks, Wyandottes and Orpingtons. The above study represents a First Prize Exhibition Pen of Barred Plymouth Rocks at the above mentioned show and may be considered faithful portraits of these individuals as they stood before our camera. In color and barring, they were all that could be desired, having plenty of straight-across, clean-cut, contrasty barring. This pen was headed by a very typical and graceful cockerel of fine size. To any who had the pleasure of seeing them, we feel quite sure they will be carried in memory as a grand pen of high class Barred Plymouth Rocks. We considered them good representatives, as one of "Owen Farms Big Four."—A. O. Schilling.

and to have all his pullets considered for place proves their merit. His second prize pen was up close, the 4 females well mated and well barred, the male rather unfinished in tail.

Pine Top Poultry Farm (Mr. John H. Hallock) made a

R. C. R. I. RED.

"Red Cloud" cockerel, first pen and best colored pen, Cincinnati, 1909; first cockerel and best colored male, Wheeling, 1909. Bred and owned by Minnehaha Poultry Farms, Bannock, Ohio.

good exhibit in both their varieties, Barred Plymouth Rocks and S. C. White Leghorns. In Barred Rocks about half their birds were past their best show form and the hens were laying, and several of the others were still in short feather and from two to three weeks late for this show. Their birds show improved quality and had the dates come right a different story would be told. In S. C. White Leghorns they did extra well in this great class, possibly the best ever shown. They won sixth cock, fifth cockerel, fifth and sixth pullet and first exhibition pen in a class of 17 pens. They were also awarded cup for display and special for best pen. Their new catalogue is out and free for the asking.

Mr. C. H. Shaylor, Lee, Mass., another of the old time breeders, came to see the show and incidentally send in a few. They were pretty young; still, we find, they were considered. Mr. Shaylor told us he wanted to compare them in color with the winners. His cockerel has the ear-marks of making a great bird, grand in form and of clean, even color and finely barred.

Jonas Hayner, of Livingston, N. Y., again landed on pullet, winning fourth; also seventh on pen and two specials. Mr. Hayner is rapidly coming, and in particular with his female line. We hope to see more of him and his birds at New York.

George W. Hillson, of Amenia, N. Y., was also there. His was the same general complaint that affected several this season—the birds were not quite ready. Mr. Hilson showed a great cockerel that, when at his best, will make them all step some. His is the Steel-Blue color we have heard so much of but very seldom see, barring very narrow, sharp and clean; this, with a good head, will make him a valuable bird. His seventh pullet when full grown will make a good one; she has a clean cut bar of excellent color.

The Owen Farms, Vineyard Haven, Mass., have made their bow to the Garden critics in Barred Rocks and have come out with much glory, victors even beyond their fondest hopes. Their birds were stalled en route and did not arrive until Tuesday noon, after 60 hours in confined coops, which surely was a handicap on condition. Their winnings are third cock, fourth, sixth and eighth hens, fifth cockerel, eighth pullet and first prize exhibition pen. Special first

prize pen mated to produce pullets. Their fifth cockerel pleased us grandly, only he needs from 3 to 4 weeks to show at his best; his color and barring, as well as his form and all head points, are just about ideal. We had to pass their best hen for having a bruised feather in wing. First pen contained a wonderfully clean, sharp-barred cockerel of grand shape. The four females were grandly matched and of choice color, wings extra fine. Special first pullet mating pen had one of the four best pullet bred males we have ever seen; his mates were all strong breeders of value.

It remained for Owen Farms to make a unique record. They won first prize exhibition pen on each of their varieties as follows: Barred Rocks, White Rocks, White Wyandottes and S. C. Buff Orpingtons. These awards, besides several others in each of the above classes, make a record of great merit. In S. C. White Orpingtons they won first and second cock, first and second hen, first and fifth cockerel, no pen of these shown. Mr. Delano and his assistants did a land office business; their line and their method of doing business is well and favorably known, and is receiving the generous support of an appreciative public.

Mr. E. B. Thompson, Amenia, N. Y., came as a visitor for two days and spent seven-eighths of his time in Barred Rock row. Mr. Thompson did not show his "Ringlets" this year; he has been at it so long and has shown most liberally for several years past that he was entitled to a rest. It is a great job to make an exhibit of from fifty to seventy-five Barred Rocks, he said, and business this year has been so regular and the ever increasing demand for "Ringlets" has kept our entire force on the jump that it was really impossible for me to think of making an exhibit. Mr. Thompson never looked better in his life than now. He made a careful study of every bird shown. We have often seen him stand from ten to twenty minutes before some cage to study quality and character. Mr. Thompson is a careful student, as we have before stated, and it is his knowledge and attention to detail that has made his "Ringlets" famous and his success possible and worthy. Mr. Thompson has lately issued a new catalog that is free to all interested for the asking.

Another most interested visitor was Mr. Victor Bradley, of Bradley Brothers, Lee, Mass. We had the pleasure of

Third prize Barred Rock pullet, Indiana State Fair, 1909. Bred and owned by C. E. Spaugh, Rugby, Ind.

going over the entire class with Mr. Bradley, to our mutual advantage. Mr. Bradley has for years been a contender at the New York shows, and his record of New York winnings date back for nearly twenty years. Bradley Brothers enjoy

a world-wide reputation; their line is favorably known in every section where Barred Rocks grow. Mr. Bradley reported that this had been their best season to date. The demand for exhibition and choice breeding birds has been unusually large and, as Mr. Bradley said, "We have the

What a magnificent head! This is one of the finest heads of a Barred P. Rock male we have ever seen. This is quality. How intelligent he looks and how well he carries himself! This is a representative of the famous "Aristocrat" strain introduced by W. D. Holterman, the fancier, of Ft. Wayne, Ind. Mr. Holterman carries a large ad in this issue with a good cut of a remarkable male. This ad speaks for itself. Look it up and write him. His quality birds will surely help you. We understand that these birds will be offered at very low prices.

stock and quality for all that come." Last spring we paid a visit to the Bradley home, and reported our observations in this paper.

Mr. W. B. Barton, Dalton, Mass., one of our oldest breeders of Barred Plymouth Rocks, was at the show with a few of his birds. He is an early breeder, and most of his birds have already won their share and were past their best form here. This line is of excellent size and shape, with a grand shade of color. Mr. Barton also breeds S. L. Wyandottes and has a New York record on them. He did not show this variety this year.

One of the interesting Barred Rock breeders seen at New York each year is Mr. Haldie Nicholson, Leominster, Mass. His specialty is the cockerel mating line, and within the last few years has bred many winners of note. Last year for the third time he won the Lawson cup at Boston with his first prize cockerel. We just have report of Boston and find that he again wins first cockerel this year. We believe this gives him three successive wins of first cockerel at this great show.

Graystone Poultry Farm, Yonkers, N. Y., Mr. F. H. Davy, manager, made a most excellent record with their White Plymouth Rocks, winning in this one of the great classes of the show first cock, first and fifth hen, first pullet and second, fourth and sixth pen, special for best display, special for best cock, hen, cockerel, pullet and pen, special and championship female, also special for best cock and hen, best shaped and best headed female, etc. This is a sound and hard record for this class and was well earned. The birds were grandly conditioned and properly matched.

Mr. G. D. Tilley, Darien, Conn., fell in line, winning fourth cock, first and fifth cockerel and third pen. First cockerel was the beauty of the class, a really wonderful bird in form

and color as well as in condition. Mr. Tilley had other entries, his display of fancy water fowl in the large tank in the center of the garden attracting much attention. It was the best collection of rare and beautiful birds we have ever seen.

In Buff Plymouth Rocks our old friend John W. Poley, Royersford, Pa., made his usual killing. Some breeders think nothing of going to New York and copping most of the prizes. This has got to be one of Mr. Poley's regular habits and this year was no exception to the rule. In a grand class of birds his winnings this year were: First cock, first and second hen, second cockerel, second and fifth pullet, first and third pen. He was also awarded special for best colored male, shape and color special female, the National Club cup for best cock, hen, cockerel and pullet; special for best display, winning this by more points than his four nearest competitors combined. We believe this is the best record ever made at the Garden show with this variety. When we consider the class and the quality of this exhibit, then we are certain that it is the show record.

Mr. M. J. Corey, Springfield, Mass., made his first appearance at New York as an exhibitor of Buff Rocks. For some years he has won at Boston. This year he tried New York and found the show came early for him, and his birds were not quite ready. The few he did enter had most excellent quality in color and a type and finish that was good to see.

The Rockandotte Farm, Southboro, Mass., Mr. W. R. Graves, proprietor, sold White Rocks for this show and only exhibited a few of their White Wyandottes. The Rocks they sold did exceedingly well, and we only regret that we can't give their winnings in detail. But, as Mr. Graves told us, all credit is due the man who pays and it is not for me to claim what they get and pay for. On White Wyandottes Mr. Graves won in this, the best class ever shown, fourth and fifth cock, fifth hen and fifth cockerel. See description of these birds elsewhere. Mr. Graves was greatly handicapped this year, as the early birds were laying and past their best show form, and the younger ones were not far

WHITE WYANDOTTE COCKEREL.

Winner of first in class and A. P. A. gold medal for the best cockerel in the show. Cut from an unretouched photo. Bred and owned by Ira C. Keller, Prospect, Ohio.

enough along. This line of White Rocks and White Wyandottes have won well for years at New York and Boston. We have handled them for years and are free to say that they improve yearly, with this season no exception. No

strain supports a better reputation, and no breeder more worthy of success.

Mr. Arthur G. Duston, South Framingham, Mass., had an acute attack of rheumatism and could not prepare his birds to show this year. He managed to limp to the show for one day. We could sympathize with Mr. Duston, having the same affliction; we well know what he had to contend with. He was greatly missed at New York, for his entry would have completed the list, with all great breeders in line competing for honors. Mr. Duston was very enthusiastic over trade conditions and the amount and quality of his stock. He assured us that business was in excess of all previous years and that the future promised much.

A new man came to New York in the person of A. J. Fell, West Point, Pa., and won first cock, first hen, sixth cockerel and third pullet on White Wyandottes. This record was made with grand birds properly shown and in the very best of condition. We hope to write up this strain in the near future and to then tell our readers more of it.

Glen H. Burgott (son of the only George H. Burgott, of Lawton Station, N. Y., a judge of fame and breeder of S. C. Brown Leghorns) was also a new exhibitor and landed

FIRST PRIZE COCK MISSOURI STATE FAIR 1909
Special "Best Bird in Show"
J. C. RICKEY CLARENCE MO.

a blue with one of his choice Buff Wyandotte hens, winning third on the other. We handled this line at Buffalo last year, where they were winners of note. More success to you, Glen.

Sunnybrook Farm, West Orange, N. J., Mr. C. D. Cleveland, proprietor, entered only a small string of their Columbian Wyandottes and won third and fourth hen, third pullet and first prize exhibition pen. This we consider an exceptional record for this large and hot class. Their birds do carry excellent form, a feature we like to see above all others, while both neck and wing markings were very good. Their first prize pen was the feature of the entire class. The male was beautiful in form and markings, with a grand Wyandotte head. The females were well matched, sharp and clean in markings and exceptionally good heads.

Tannanbaum Farms, Willoughby, Ohio, sent down a couple of their Columbian Wyandotte pullets to feel out the competition as a starter, and trotted home with first prize pul-

let for their trouble. This sort of a record is seldom made at New York. The pullet was a beauty, with type and excellent neck and wings, grand head and comb. Come again, we want all we can get of that class at New York.

Mr. John S. Martin, Port Dover, Ontario, breeder of the "Regal" White Wyandottes, spent several days at the show making friends and getting a line on America's best Wyandottes. Mr. Martin has shown his stock over here several times and has many notable victories to his credit. For three or four years he has made record wins at the New York State Fair, and his record for years at the "Ontario" is also well known. We had the pleasure of a visit at the Martin home in December, last, and wrote our impressions in our January issue.

Mr. Joseph Russell, of Toronto, Ontario, was another interested White Wyandotte and S. C. Rhode Island Red visitor at the Garden show. Mr. Russell has for some years bred and shown these varieties with unusual success. Nothing but the best satisfies Sir Joseph. On Whites at the late "Ontario" he won first and third cock, second, third and fourth hen and collection special. At Toronto, Christmas week, first, fourth and fifth cock, first, second and sixth hen, fourth, fifth and sixth cockerel, first and second pullet. Mr. Russell represents his district in the house of parliament. He is an enthusiastic fancier and the kind of a man we like to meet.

Mr. Lester Tompkins, Concord, Mass., made nearly a cleanup on S. C. Rhode Island Reds. He is another that has got the winning New York habit. When he does not wear the judge's badge at New York, he enters and gets the ribbons just the same. This year he contented himself with winning first and fifth cock, first, second and fourth hen, first cockerel, third and fourth pullet and first pen. This is just about the Garden record. Quality was unusually strong in all these classes, and this win well deserved.

The Orpington classes were all pretty well filled with the best to be found; in fact, in some of the classes the speed was terrific. William Cook & Sons, Scotch Plains, N. J., entered a full line and won thirteen first prizes and twelve other places and two special cups. This record, like the great elm, stands to be seen, and is a credit to skill and industry. Mr. Cook was a busy man at the show. We now also have a report of his Baltimore winnings, as follows: They won there eleven first prizes, five seconds and two cups for best display of Orpingtons.

Ernest Kellerstrass, Kansas City, Mo., came all the way to New York with a string of his "Crystal" White Orpingtons to compete at this the world's greatest show. No mistake, birds, and particularly white ones coming that distance, are handicapped on condition. Their display attracted much attention, in particular their first prize pullet. She greatly resembles in type his world famous hen "Peggy." She was a dream and good to look at. His complete winnings are fourth and fifth cock, fourth and sixth hen, second and third cockerel, first and third pullet and second and fourth pen. All this from the greatest class ever shown and after a 1,500-mile trip across the country.

Miss Sophia C. Pritchlynn, Washington, D. C., won the S. C. Brown Leghorn second hen, first and third pullet and second pen, showing only in these classes. Miss Pritchlynn is an ardent fancier and has a line of Leghorn females that have size, shape and wonderfully fine backs and neck markings.

Mr. D. W. Young, of Monroe, N. Y., the well known breeder of S. C. White Leghorns, has probably won a few more prizes at some shows of the past, but he has never approached his this year's record when we consider the class and competition at the late New York show. At this writing we haven't a list of the specials he won. His regular winnings were: First, second, fourth and fifth cock, first and fifth hen, first, second, third, fourth and sixth cockerel, fourth pullet and second pen. After seeing this class we did not think a win of this kind possible, but it has been made and all credit belongs to Mr. Young. His birds carry the same grand size and wonderful shape we spoke of so strongly last year. These features, along with most excellent head points and perfect condition, only make possible such records.

Another breeder of S. C. White Leghorns well known to the fancy is Mr. Irving Rice, Cortland, N. Y. We have known Mr. Rice as a breeder and exhibitor for a great many years. He is one of the reliable old guard and has ere this been called to judge the Leghorns at New York. This year he won third pen in the class of seventeen shown. His birds have good size, are white and carry excellent heads. They are always shown well.

Mr. T. A. Faulds, London, Ontario, the well known breeder of Single and Rose Comb Black Minorcas, was a visitor and still carried his "Ontario" smile. We don't blame him.

for this, as his winnings were great there in a fine class. We also presume he kept an eye on his fellow townsman, Dick Oak.

In order to get a mild shot at Dick, we came near overlooking Mr. Hugh A. Rose, of Welland, Ontario. He brought over a line of Silkies and Bantams, and his coops were most liberally decorated with ribbons for his trouble. At the "Ontario" Mr. Rose made a complete record with his Cochins and Bantams..

THE CLASSES AND THE BIRDS.

The Barred Plymouth Rocks.

This class, while not quite as large in numbers as last year, was still the largest class at the show, as usual, with 283 birds shown. Nothing was lacking in quality, and close, fine picking was had in every class. As a rule the birds were shown in excellent condition, and if we were to select the most prominent features for special mention, they would be clean, bright and sharper color and greatly improved head points. We consider that the general improvements are very conspicuous.

Cock, first—Typical in every line, grand head points, strong red eyes, clean yellow legs, well set; a strong, large, vigorous bird; broad, deep and full. He also wins shape special. In color strong, narrow and evenly barred in every section. Breast the best we have seen, undercolor sharp and clean. Second—To describe the first is also to describe this one. They were alike as could be in every way, the same style, shape and quality; a great pair. Third—A bird just to our liking, shape excellent, and hard to improve this fellow in any way; his color of proper shade and free from all sheen; in tail he was not quite finished, and he plainly showed the effects of his long cooping. Fourth—Fails just a mite in type, in surface color and style of barring exquisite, a grand example of the best possible strain of barring. This cock also won the special for best headed male. Fifth—Another good one, close up in quality, fails some on condition. Sixth—A strong cock of shape and color, not at his best condition here. Seventh—A real good one and lacks only in finish of neck and tail. Eighth—Similar, needs two weeks to finish. Other birds considered were Nos. 172, 165, 154, 155 and 147.

Hens, first—A hen of exceptional beauty in both type and color. She also wins the shape special and female championship. Shown at her best she was a great winner. Second—Extra close up; in fact, her shade of color and style of bar probably superior, but she was about week past her best form. Third—An extra fine barred hen, one of the best, but unfinished in neck. Fourth—A hen of rare color and fine shape, a little past her best. Fifth—Grand in shade of color, beautiful breast and wing, but not shown in proper condition. Sixth—A large hen of grand color, fine head and strong eyes. Seventh—A beauty, short feathered, needs two weeks to finish. Eighth—Good shape, extra barred, a half shade dark, should make a grand breeder. Others close up and considered were Nos. 175, 179, 190, 192, 197, 200, 203, 206. No. 182, excepting first and second, one of the best we have seen, but shown with bruised feather in wing.

Cockerels, first—One of the three best males we have ever seen, grand in shape and fully finished; ideal head and strong eyes; breast deep, full, well rounded and beautifully barred. His color is just of the proper shade from head to tip of tail, not an off color or shade to him. Barring narrow and sharp to the skin. He also won special for champion male and color special. Second—Another of wondrous beauty and quality; needs two weeks only to fill out; shape and color of the best, comb fine, eye fair, underbarring extra, with grand wing and barred breast. Third—A strong barred and even colored bird of extra size and beautiful shape; strong red eyes and very good comb and head points. Fourth—A bird of beautiful type, a half shade strong in color, very fine and clean underbarred; will make a great breeder and cock bird. Fifth—A young fellow with every promise for the future; his shade of color and the style of barring excellent, under very fine and clean, shape extra. He pleased us greatly, but is young for here and must have more time. Sixth—Another young one, very finely barred, choice head and the makings of a beauty. Seventh—Close up and a very good one. Eighth—Just past his best; a very clean and a clear barred bird; extra under and fine comb and head. No. 254—A handsome, clean barred bird, close up. No. 252—A beauty in shade of color and barring, tail a mite high and one feather damaged. No. 218—A half shade light, grandly barred.

Pullet, first—Just a mite immature and not fully filled out, but of good size and bone, excellent shape, and the very choicest shade of color and style of barring. She had but the one, and that was the best in color and barring, surface and under, and, if memory serves us correctly, we believe in these respects she even surpasses her famous grand dame,

"Fluffy-Ruffles," as a pullet at New York three years ago. She also won the female color special. Second—A beauty in every way; size, shape, color and barring just about ideal, one showing strong breeding and careful handling. Third—Very close up in every quality, with merit even; both these had grand eyes, good legs and shown at their best. Fourth—Another corker of beautiful type, firm color and grandly barred; also well shown. Fifth—In color and style of barring similar to first, but had wing short feathered; needs three weeks to finish. Sixth—Very clean surface and nicely barred, good size and form. Seventh—Rich in every quality, but a mite immature. Eighth—Another corker, just a little young, good color and bar. This class was full of hot contenders; of forty in the class, twenty-two were considered for places.

Pens, first—Headed by a most beautiful male of even, clear and sharp color, perfectly finished with grand comb, strong eyes, etc. The four females were extra well mated, bright and clean barred, good legs, eyes, etc. This pen was shown strong by its mating, matching and general type of male and the females. Second—A wonderfully fine pen and a close runner to first. The male, while a strong one, was not at his best, lacking in tail finish. The four females were

grand birds, well matched and of even quality. Third—One of the best pens of females we could wish to see. The male failed in shape, while a real beauty in color and barring. Fourth—Male a hot one, but a little young. The four females were well mated and of superior quality, typical and with extra good wings. Fifth—Male a half shade dark, of good type; the females grand in color and type. Sixth—Male a rare good one, but a trifle young to show in pen properly; extra choice females, but one went way off on condition. Seventh—A good pen, well shown, but just past their best; made extra in head points and of good color. Eighth—A rare pen, two of the females laying and past show shape.

Special cockerel mating pen to A. C. Mawkins. Male strong, sharp and clear, barred to the skin, grand comb and eyes, beautiful form. The four females evenly matched, of good size and shape, and extra fine, clear but very strong color; all with good heads and eyes.

Special pullet mating pen to Owen's Farms. Male one of the brightest and cleanest color we have seen; he was line barred and to the skin. The four females here were of excellent type, good, sharp color, extra wings and very nice heads; a very choice and valuable mating.

White Plymouth Rocks.

White Plymouth Rocks were a beautiful quality class of nearly 200 birds. Condition was the prevailing feature here. We believe the first cockerel was the best conditioned white bird we have ever seen. Noted winners of past years were shown here and others that did win were up to the quality of any.

Cock, first—A noted old champion winner of past years, still shown in extra condition, both as to form and color. Second—An extraordinary cock, very close up in every quality, that made hot picking for the judge. In both form and color this is a phenomenal cock bird, one of the rarest of the rare. Third—Good in both type and color. Fourth—Another rare one, grandly shown; this condition and type is bound to tell. Fifth—A good bird in every way, splendidly shown. Sixth—Another beauty; we liked him immensely; think he hardly stood at his best on judging day.

Hens, first—Here another old champion winner takes the blue; she retains her wonderful shape and color. Second—A grand hen, probably a little overdone in washing. Third—A dandy, well shown. Fourth—A very fine hen in shape and color. Fifth—Well shown and nice. Sixth—A beauty, just a little past her best. There were several more extraordinary hens here and the judge surely had a job.

Cockerels, first and fifth—The bright, particular star of the class, ideal in shape, perfect condition, snow white, grand head, strong red eyes, pure yellow legs. He was well broke and stood at his best. One of the best birds we have ever seen at a show. Second—A real beauty, grand in type and snow white color, fine comb, strong eyes, etc. Third—Snow white and of good form. Fourth—Very similar and a good one. Fifth and Sixth—Both choice specimens.

Pullet, first—Grand in color and of good form. Second—Very close up, a beauty well shown. Third—Another corker; she looks extra good to us. The other winners were all good in color and form, with nice heads, etc.

Pens, first—Probably the best pen of White Rocks we have seen, carefully matched, of ideal form and sound color, with strong eyes, legs and beaks. The male stood out strong in every quality, a perfect Adonis, with sharp eyes on the victorious blue ribbon hanging overhead that had gloriously won in the strongest competition and from the fourteen best pens ever shown. Second—A hot pen of females, well mated; male strong type and a good one. Third—Well shown and a close contestor for honors; all birds of splendid type. Fourth—Also close up and in the running in any company. Fifth and sixth were quality pens, as were also several others shown.

Buff Plymouth Rocks.

Were a class of ninety-eight birds, making one of the largest and without doubt the best class of Buffs ever shown at the Garden. Type and head points show marked improvements, and we can well see the reason here in the general and improved interest shown in the Buff Rocks.

Cock, first—Very clean and choice color, grand in form, with good head, eye, etc.; an extraordinary bird from every viewpoint. Second—A grand bird, well shown. Third—Close up, but not at his best show form here. Fourth—A corking good one that we have handled before. Fifth—One of the quality kind, surely a great breeder.

Hens, first—A veritable queen of the class, shown at her best, beautiful in both type and color, or one even shade of sound, pure buff, exquisite head, low comb and strong eye; a hummer. Second—Close up, with every desired quality. Third—Another good one in every respect. Fourth and fifth—Both of grand type and clean, pure color. No. 431, unplaced, looked very good from the outside.

Cockerels, first—Good in type and color, very even, probably excepting tail, which did not appear to match in color so well as some others. Second—Also a real good bird. Third—Grand in color, but not fully developed; good head. Fourth—Probably a little past his best form; a dandy in color. Fifth—Another good one. We considered this class extra strong, and Nos. 455-457, both unplaced, looked extra good to us. No. 466, also unplaced here, but won first at Guelph, we considered one of the best in both color and form that we have seen to date.

Pullets, first—A real beauty in color. Second—Surely gave first a hard run; splendid in both shape and color. Third—Also very nice. Fourth and fifth—Both quality specimens and well shown.

Pens, first—To us this appeared as good a pen as we have ever seen, or have expected to see, of the best quality, grandly matched and of ideal type. Second—Another good pen, well shown. Third—Close up in every quality. Fourth and fifth—Nice goods, with both type and color as the feature.

Partridge Plymouth Rocks—Rather small classes, with quality very fine for this variety.

Silver Penciled Plymouth Rocks—A great class of eighty-four birds, with type a feature. The winners, as a rule, were exceptionally fine birds. First and second cock and first and second cockerel were beautiful in color and markings. First hen a wonder, and first pullet close up. The six pens shown were well mated and completed the best class of this variety we have seen.

Columbian Plymouth Rocks—A class of thirty-six birds shown. Type very fair, showing good improvement, color and markings good. This variety is progressing well and is bound to improve in quality and popularity with time.

Silver Laced Wyandottes.

This grand old beauty variety was represented by a class of sixty-eight birds, that formed one of the best classes we have seen for years.

Cock, first—True Wyandotte type; grand head and comb with beautiful hackle and saddle, sound breast lacing and grand wing bar. Second—Also finely laced breast with good head. Third—Typical and close up. Other winners good.

Hens, first—A perfect dream, type grand, lacing beautiful. Second—Close up, very finely laced. Third—Another hot one and close runner.

Cockerel, first—Extra hackle and saddle, finely marked, good head and grand type. Second and third ran close; both fine laced breasts, etc.

Pullet, first—Openly laced and very clean, good type. Second—Similar, not quite as well done in neck. Third—Grand head and another very good one.

The four pens were well shown, but hardly up to the single class birds.

Golden Wyandottes—A very fine class of thirty-one birds, that were grandly shown and of extra good quality, attracting much attention.

White Wyandottes.

Next to the Barred Plymouth Rocks, the White Wyandottes were the large class in the show, with 266 birds in line. Competition was hot, the classes were all filled with a splendid quality, condition was a feature here and we can well imagine Judge Andrews had his work all cut out for him. This was his first New York appearance, and we believe he did a clever job that gave general satisfaction.

Cock, first—A beautiful Wyandotte type, choice in head and finished to the minute; he also wins shape and color specials. Second—Close up and well placed, has every desirable quality. Third—Another beauty, grandly shown and of the finest type. Fourth—A grand form bird of extra size and head points, back beautiful, tail filled, strong eyes and rare good type. Fifth—Another of rare good quality, with grand back and tail and ideal head, chalk white. No. 654—Another beauty of fine form and snow white.

Hens, first—Splendid in type and snow white, shown just right, good head, comb and eye. Second—A beauty and a close runner for place, back and tail ideal. Third—Surely one of the best, comb and eyes strong, with good back and tail. Fourth—Another hot one in form and color. Fifth—A rare good one, but laying and here loses in condition. Sixth—Very fine and well shown.

Cockerels, first—A very nice one indeed, typical with good head, eyes, comb, etc. Second—Also a beauty and grandly shown. Third—Fine type, good finish. Fourth—A corking good one; he suited us grandly. Fifth—Snow white, pure yellow legs, well set, grand eye and beautiful comb, back and breast ideal; here is a beauty to our mind; the judge surely had picking in this class.

Pullet, first—A neat one, with plenty of shape and color, good head and eyes. Two—Splendid back and breast, tail finished and of our kind, a real model. Third—One other beauty, also with grand back and tail. Fourth—A very neat one, of rare, good quality. Fifth and sixth went to choice birds well shown.

Pens, first—A most magnificent pen of Wyandottes, grandly shown, with every desired quality; the shapes of the backs, as well as the high and even grade of quality, was the feature that attracted attention here. Second—Also a very sweet one, finely matched and grandly shown. Third—Close up, a beautiful pen. Fourth—A stunner; could hardly find a flaw here. Fifth and sixth—Both beauties, grandly shown and well mated. Several other pens here stood out strong in every quality, in our opinion, notably, Nos. 3049, 3050, 3041, 3043. These were all beauties, but there were not ribbons enough for all the hot ones shown at the Garden this year.

Black Wyandottes were rather a small class for this show, while the quality was pretty good, type and heads the best, we thought.

Buff Wyandottes brought out sixty birds, with splendid quality all along down the line. This is the real beauty breed, to our notion. We like to see them, and when shown in New York quality line they stand as beauties unquestioned. The winners were all exceptionally fine birds and each should be described here, but our health would not allow us to devote the time we wish to the show, and some of the classes, we are sorry to say, we had to pass up. We handled first hen. She was a good winner among several strong ones; she has grand type and clean, rich color. We thought the judge did a splendid job here.

Partridge Wyandottes—Thirty-six birds in this class. Here type was well shown, color rich and markings beautiful. It was a very even, high grade of birds, with winners well placed.

Silver Penciled Wyandottes—Eighteen birds shown at this class, with good quality. Both type and color were well done.

Columbian Wyandottes.

Columbian Wyandottes were a grand class of 139 birds. Seven in the single classes and thirteen pens confronted the judge. Type, color and markings averaged very good, as did also head points, making as choice a class as we could wish for at any time or place.

Cock, first—A beauty in color, good head and well shown, with fine wing. Second—Also a choice one of fine shape. Third—Very good, fine markings. Fourth and fifth—Close up and good birds. Nos. 893 and 895 were birds of rare quality, good in both type and color, with extra fine wings.

Hens, first—A rare beauty, one of the best in color and markings we have seen. Second—Good in color. Third and fourth—Very fine hens, good Wyandotte type, with good heads, eyes, etc., with wings and tails also good; several other grand hens shown.

Cockerel, first—Grand in color, with good head. Second—Good type. Third—Good form and of fair color. Fourth and fifth—Both fine birds; several others here with grand type and markings that looked good to us, in particular Nos. 924, 925, 928 and 929 were choice birds, of shape and good heads.

Pullet, first—A beauty in shape; in fact, a model, with choice color and markings, grand wing and tail. Second—A close one, but failed some in markings. Third—A gem in every way, well shown. Fourth and fifth—Both grand birds.

Pens, first—Headed by a magnificent male in both shape and color, hackle, saddle and tail grand. The four females were grandly matched and of the best of color and markings, with proper and uniform shape. Second—Very good in markings and color. Third—Good in individual quality, but not so well mated. Fourth—A grand pen in every way. Fifth—Also good and close up. The pens were a warm proposition all the way through.

Buckeyes—A small entry, good in color.

American Dominiques—Were a fair sized class, with good quality in every bird shown. These old favorites hold their own, and we look for them as now bred along liberal Standard lines to improve in both quality and popular favor, and to see more of them at the future shows. The Dominiques have merit worthy of better attention.

In Anconas, twenty-eight birds were shown, and well shown at that. The average was very high quality in each class. These birds attracted much attention. They have many good qualities and the breeders have every hope for the future.

S. C. Brown Leghorns.

Here was one of the choice classes of the show. Seventy-five S. C. Brown Leghorns faced the judge. Excellent type and a high average of color was the feature here to be noted.

Cocks, first—A grand typical bird of rich color, grand size and extra markings in hackle and saddle, good comb, strong eye, etc. Second—A close runner also of size and shape. Third and fourth—Strong males, well shown.

Hens, first—Grand head and beautiful back; she looked very good to us. Second—Also a beauty, with clean back and good wings, fine shape and grand carriage. Third, fourth and fifth—All hot ones of good type.

Cockerel, first—An ideal in shape and style, rich color, grandly marked and with extra fine head and comb. Second—Good shape, but failed some in his markings. Third—A very warm one, fine in shape, size and markings. Fourth and fifth—Nice clean fellows of good quality.

Pullet, first—Legs a mite weak, but of fair size, shape and color, with back and wings free from all shafting. Second—Good in type, but not as rich in color. Third—A rare beauty of grand color. Fourth, fifth and sixth—All good pullets, with several other fine ones to complete this large and strong class.

Pens, first—A great pen headed by a remarkable male; his rich color, with good size and form, appealed to us strongly. The four females were extra well matched and of the highest quality. Second—Another beauty pen, with a great male and four extra choice females. Third, fourth and fifth—All were good pens of merit.

There were but few Black Leghorns shown. They looked good in form and quality.

R. C. Brown Leghorns.

The R. C. Brown Leghorns made a very pretty class of fifty-three birds. These old favorites are surely doing grand these days. We were particularly pleased to see the improvement being made in size.

Cock, first—Good style, fine head and well marked. Second—Another grand head; here also was size and beautiful shape. Third—A grand colored bird. Fourth—Good size and form. Fifth—Real good color and size.

Hens, first—A real gem, with extra size and form, good color, back and breast extra good. Second—Another real good back and fine wing, with good head. Third—Close up with great color. Fourth and fifth—Both fine specimens.

Cockerels, first—Grand in both shape and color; markings we thought were extra good. Second—Close up, with extra choice markings and color. Third—A beauty, of grand form, well shown. Fourth and fifth—Both well marked and rich in color and very nice type.

Pullets, first—A beauty specimen, with shape, size and color. Second—Good type and nice head. Third—Good in form and color, with extra hackle. Fourth—Good form and well shown. Fifth—Very neat, a good one.

Pens, first—Male of grand size and beautiful color, striping in hackle and saddle very fine. The females well mated and of choice grade. Second—Close up and well shown.

S. C. White Leghorns.

One of the banner classes of the exhibition. Here again the giants of the White Leghorn fancy fought it out for honors. Every class was grandly filled, and we don't see how competition could have been improved. There were 130 single entries and seventeen exhibition pens, making probably the choicest class of this variety ever brought together at any show.

Cocks, first—An exceptionally fine specimen of grand size, shape and snow white plumage; his condition was beautiful, carriage perfect, head and comb fine, neck finely arched and tail full and carried perfectly. Second—Very close up in every particular; failed only a mite on head points. Third—Not of the same style, but of good color. Fourth—Another with beautiful head and grand in style. Fifth—Very similar. Other grand cocks were shown here. Those in particular worthy of mention are Nos. 1580, 1581, 1583, 1592, 1596, 1597. These were all birds of highest merit.

Hens, first—A most beautiful hen and up to last year's standard, good size and shape and extra condition. Second and third—Similar and a fine sized specimen. Fourth and fifth—Both good in style and well shown. Nos. 1606, 1622 and 1623 were three other beauties that must have run up close.

Cockerels, first—A grand, large fellow, with size and form, good head and very fine condition. Second—Close up, shown in wonderful shape. Third—Fine in shape, size and condition; failed a mite in head points. Fourth—Ideal comb and a corking fine cockerel. Fifth—A very strong and beautiful bird; needs two weeks to finish. A great class of cockerels, to say the least; several without mention fit to win with credit at any show.

Pullets, first—Fine yellow legs, snow white and of fine form, with good head; a splendid bird. Second—Very similar, with good head, pointed and choice form. Third—Shown in grand condition, with very good form and nice head points. Fourth—Grand in size and, we thought, very well shown. Fifth—Excellent condition, snow white, pure yellow legs.

Pens, first—An exceedingly fine pen, the cockerel of both size and typical, with beautiful head. The four pullets grandly mated and matched, with good heads and eyes and pure yellow legs. Second—Had four extra choice females, well shown and of good type; male a beauty, that we had seen before enter the ribbon. Third—A handsomely mated pen of rarest quality, well conditioned, good size and good heads. Fourth and fifth—Both good pens, full of quality, as were also several others unmentioned.

R. C. White Leghorn class not very large this year. Some of the old timers absent. The birds looked good and were shown in very fair shape.

S. C. Buff Leghorns.

This was another of the warm classes, with 130 birds competing. They came from the East, South, North and

West. No question but that most of the best ones were shown here. It was a beauty collection, the winners all excellent birds and many of the unplaced birds also shown in winning form.

Cock, first—A beautiful headed bird of exquisite color, very even and uniform, good size and shape. Second—Fair in head points, excellent otherwise. Third—Not as even in color and coarse head. Fourth and fifth—Both good in color and type.

Hens, first—Sound color, good size and head, stands up well. Second—Good form and nice head, color very fair. Third—Grand even color, failed on head points. Fourth and fifth—Of a light shade and not as even in color.

Cockerels, first—Good in shape, with sound color and grand head. Second—Another fine one in type and color. Third—Very good in color. Fourth—Good form and even in color. Fifth—Well shown and of good type.

Pullet, first—A choice specimen of good type, sound color and well shown. Second—Close up in both form and color. Third, fourth and fifth—We thought a half shade dark, all good in form.

Pens, first—A well mated pen in both shape and color.

Cockerels, first—A very large bird of good color and very fair type. Second—Grand head, sound color. Third—A real good one. Fourth—Good in shape and color, with fine head points.

Pullets, first—Excellent head, typical and of grand color, a model and a beauty. Second—Another hot one, with both form and color. Third—Was very well shown. Fourth—Good color. Fifth—A very nice pullet.

Pens, first—A real good, even pen of grand quality, well mated in form and size and headed by a rich, strong male. Second—Very close, we thought, and well mated birds, but not of as good size. Third—To our mind the best pen we have ever seen; the male had one lobe damaged; his shape, size and color were extra choice. The four females of extra size and beautiful form, with grand heads and of the best and soundest color; a beauty pen in every way. Other placed pens very good.

S. C. White Minorcas were only a fair sized class and well shown.

R. C. Black Minorcas were represented by a class of forty-five birds, nine cocks, six hens, twelve cockerels, eight pullets and two pens. In this grand class color was the feature,

A FEW EARLY HATCHED COCKRELS, ON THE KELLERSTRASS FARM - KANSAS CITY, MO. ORIGINATORS OF THE "CRYSTAL" WHITE ORPINGTONS

Second—Grand male here; females not so well mated. Third—Good quality goods. Fourth and fifth—Rather uneven, though of good quality.

R. C. Buff Leghorns—Quite small classes shown. Size and color not near as good as is found in the S. C. class.

S. C. Black Minorcas.

One of the largest and best classes ever seen at the Garden. High grade show quality was the particular feature all down the row. There were many bright particular features to be seen in this class. That which attracted most attention was the third prize pen. We have never seen better shape, color or size females than the four here. Headed by a beauty cock, also of grand size, shape and color, appeared to us just about right in every way. Why they should lose first and only land third is beyond us to answer.

Cock, first—Grand in size, good form, with very nice head and rich color. Second—Good shape and station and very fine color. Third—Close up and a very good one. Fourth—Fine in color. Fifth—Good type and color.

Hens, first—Extra in both shape and size and choice in color. Second—Good color and fair shape. Third—Failed in head points, good body and color. Fourth and fifth—Both very choice hens.

very closely followed by head points, type and size. The winning males, and in particular the first cock and the first and second cockerels, were grandly shown, well finished and of a superior quality. The same can also well be said of the winning females. It was a real hot class, with the winners well placed.

Blue Andalusians counted just forty-five birds, a very good showing indeed. This variety is doing splendidly and is being improved year by year. Whether or not they will ever become popular favorites remains to be seen. They certainly have quality and lay the handsomest egg produced, and plenty of them, too.

On account of our affliction (rheumatism) we were handicapped in getting over the entire show as we had planned. We had the promise of an expert to send us notes on these classes, and to this time they have not arrived. We hope to give these classes in our next issue, as they are too important to pass up or to do them only half right. So we trust our readers will bear with us for this time. Other varieties not mentioned here were also given some others to do, and we trust they will appear in this issue.

H. P. Schwab.

(New York Show Report continued on page 216)

WHO'S WHO IN HENDOM

L 5

I 'VE been feeling pretty well all day, thanks to an order for a dozen of my cull cockerels, so I am going to head back East, or down East, or up East, anyway to get there, and continue my pilgrimage which I started last month. You will remember that I was hoofing it East as fast as I could do the hike when I ran squarely into the state of O-hi-o. I escaped the "bunch" there, and now am in the center of that state of states, the Empire state, looking up the Who's Whoites who will not take our matter too much to heart.

Omar, the pote, was a great guy. I have come to this conclusion after some hours spent in poring over his Rubaiyat and in trying to get the full meaning from the third quantrain, which refers to the fanciers of the state of New York:

And, as the Cock crew, those who stood before
The Tavern shouted: "Open then the door!
You know how little while we have to stay,
And, once departed, may return no more."

Quite appropriate, is it not, for those merry New Yorkers? Getting in as the cock crows (not insinuating in the least), shouting as though the Giants were eating up the Cubs, pounding on the door of the Ashland House, the Waldorf-Castoria, or the Castor House, waking up 3,000 tired sleepers who have spent a trying day over at the Garden show, each one trying to get that tenner of H. V. Crawford's for finding evidences of cannibalism—I mean faking—threatening that if they go home they may never come back—all this comes to mind when we read the quantrain that Omar wrote during the first quarter of the twelfth century. Omar had foresight something wonderful, didn't he?

Yes, a fellow might just as well begin right there in little old New York, calloused, dirty, unfriendly, open-armed, hostile, endeared in song and story, many-sided as a woman. New York is some town when the chicken fanciers get down there once a year. At least that is what they say when they get home. The town just lays there, dead like, the whole year through, simply to be on the job when the poultrymen go down there again. Kind of her, isn't it?

Up-state everything is on the hum a month or two before the show. Chicken men never have time to blow their bugles before the Garden show, they being so busy that they only have time to blow their supper coffee cool before it is time to get up in the morning. Then when they get down to the show they are so busy that they meet themselves at bedtime just going out to pail the cow. These are facts, cold rolled and chilled.

Every York state man who knows chickens from Charlotte Russe a la Windheim fully believes that the lays that are most important are the lays of Old Speckle. She is the original shell game. They get there first in the scramble and are eggstremely profitable. New England may be the cradle of the fancy, but the Empire state rocks the cradle. If you do not believe this all you have to do is to take notice that New York had the cradle tipped up pretty well, at least during the last New York show! Of course, every fancier in the state was down there at the time, so something had to tip.

Get the chicken men of that state away from it at any time and the dear commonwealth would shrivel up. They would make a state all to themselves if they settled down in some other section. They are a great bunch. I heard a man say at the New York show just over, that little winter Garden party of hen cranks presided over by H. V., that a fancier was a man who photographed a bird, used the photograph in business and saved the bird for himself; a poultry expert photographs the bird twice and uses both of them in selling more eggs for hatching; that it took a New York fancier to photograph a photo and then use a half-tone of it as stock in trade.

Well, let us go up-state, the din of Broadway drives me daft. Pine Top Farm, Hartwood, has been making a deal of noise

with its winnings at the Garden, and well they may, owing to their great Barred Rocks and White Leghorns. Almendinger and his Rose Comb Buff Leghorns are holding out at Buffalo, winners at the big shows. Over at Niverville is J. F. Van Alstyne, breeder of Silver Wyandottes as well as Columbians, and the Schwabs do business still at Irondequoit. At Gouverneur the Harvester strain of White Leghorns is bred by our friend Leggett. Geo. Hillson continues to hover round about Amenias, that little burg in Dutchess county where the chief employment is growing Barred Rocks, the industry started by E. B. Thompson, the Ringlet man.

Geo. Barrows, of The Maples, Groton, is another of the state's great number of White Leghorn fanciers, and he is breeding some excellent stuff. Reds are championed by S. Banford, at Heuvelton; Geo. W. Hey is breeding the Northup Minorcas in all their purity at the old stand in Raceville. Wild Goose Farm, out on Long Island, is always in the winnings and up to the front in the best Bantams and pigeons of all varieties. L. Rutherford over there at Watertown, the old stamping ground of Harry Lamon, is the life of the fancy in his section.

At Elmira the Philo Institute is all the talk, and has created a deal of that commodity in many other states. Temple and Merriman, at Gouverneur, are White Rockists of more than the average enthusiasm. Greystone White Rocks, the sort that smothered the boys a bit at the last Garden show, are bred at Yonkers. Philip Hanlon, Buff Leghorn breeder extraordinary, also calls Watertown his home. Moore Brothers, more White Leghorn fanciers and breeders of good stock, dwell at Moscow.

D. W. Young, another of the White Leghorn breeders who goes down to the Garden every year with the winning sort, makes Monroe his postoffice address, and from the many who make pilgrimages there to see his stock and place orders it must be a pleasant place. Harry Lamon, at Adams Center, is originating some little beauties in Rose and Single Comb Buff Bantams. These will be valuable additions to the Bantam contingent.

And so it goes. Here and there, scattered all over the state, little hamlets that would never have been on the map if it were not for the chicken fanciers who reside there. They tell me that sooner or later the New York fanciers are going to have a state appropriation for a big show to be held by the state poultry association. This will be a good thing. Their state fair poultry department goes to prove that the boys can get out a great exhibit when they have something to work for, and the patience with which the poultrymen have worked and placed the state in the front ranks of the fancy is deserving of still greater recognition.

At Buffalo the fanciers are so alive that they cannot see the enthusiasm indulged in by the other associations, but the fanciers from all over the state are working throughout the year to help make the Buffalo show the one great international event, so they cannot be blamed. Buffalo really holds a great show. It is a corking good one. No one can successfully deny this. They do things every day and all the night. Competing shows with this international event are about like the old bachelor who thought nothing in the world could induce him to enter the bonds of wedlock, but was finally caught by a red-haired grass-widow of half past thirty, when he knew that he was in reality a pudding and a squeezed lemon.

Did you ever stop a moment and take into consideration the amount of money that New York gathers in to herself as a chicken state? Something fierce, isn't it? When they go to the shows it takes an express car to get the money home. This is a capital offense. One young boy said to another, a neighbor: "Say, George, why in the world did your father take offense at what my father said about his chickens?"

"I suppose the gate was nailed down," replied the other. This is just it. You simply have to nail it down or they will get it, and then some of the fellows carry jimnies to pry things up with. And when they get the money home they bore

holes through it and spike it down tight. That is one thing that makes the state so wealthy. It has been said that all that was necessary to get into a good paying chicken business was to settle in the state and advertise, as the fanciers had made such a great reputation for New York bred chickens that business would gravitate to you surely, just the same as quick-silver runs down hill.

During the winter the amount of money that goes into the state for good chickens is something wonderful. There is good profit in growing chickens of the kind those New York fellows do. They are all winners. If they didn't win the attention of the entire Red world last August, at Niagara, what did they win, pray? They are all for a clean slate, back there. They pay you to show them the evil of their ways. See New York show catalog.

In some parts of the state they have a chicken house protective league, and this organization has succeeded in changing the crow of the rooster into a whistle. When the door of the hen houses opens during the night the roosters whistle for the watch dogs, and the burglars find themselves burgled, for they are spirited away to Sing Sing on the Rhine, where the Wiesburger flows. Fine scheme! When it comes to changing to suit themselves these people are right there.

Well, we leave the New Yorkers to their fate. They are optimists and Fate will be kind to them. On any and every occasion they look on the bright side. This is good policy. Sunshine is death to microbes in the chicken houses, and optimism is death to gloom. And while things look bright I will shut off the steam, trying not to stop on dead center, to the end that I may get back next month.

"And Charlotte looked up at him with large, deep brown, soulful eyes as he pressed her once more near his heart. 'Dear,' she said, 'can I always come to you in trouble?' And as darkness closed about them the plaintive nightingale nightingaled in the distant woods, and all was still, and the evening zephyrs floated on and on, and Reginald answered, 'Sure, Mike.'"

WHITE ORPINGTONS DOWN-TO-DATE

The Kellerstrass Strain and What It Is—Truth in the Name of Strain—What This Strain Stands For.

Written for American Poultry Journal by Amos Burhans, Waterville, Minn.

THERE has been a statement made recently in some of the articles from the pens of writers on poultry topics to the effect that there is nothing in the word strain as it applies to the breeding of purebred fowls. This is more such declaration means that the writer is doing it because he has not investigated the topic thoroughly or has paid no attention in the various flocks that have come under his notice to the peculiarities that constantly crop out in the birds, which certainly come from a strain, a line of blood bred within itself.

There is a breeder of very high class females of a certain or less erroneous. To come out flat-footedly and make any variety that are mostly of a great width of feather, especially in their backs. The flock was founded from two sisters that resembled their dam in this characteristic. Is this flock a

strain? It is. It will continue to be a strain until the birds will not breed in it with their characteristic breadth of feather in the back sections.

Another breeder of a line of superb exhibition males has really succeeded in making a flock of true breeding characteristics insofar that they are exceptionally well combed, free from side sprigs and thumb-marks, have perfect colored eyes (last season's flock not having a single off-colored eye in it) and exceptional color in wings. Are they from a strain of blood? They are. He has worked for fourteen years to get where he is now in a breeding way, and he is entitled to call his flock a strain. Males from his flock have been mated to cold-blooded females out on the range and have reproduced themselves clearly enough in their male chicks. Strain? Yes.

So let us not get the idea that talk of a strain is all rot. There is truth in it. Many hundred breeders all over the country have never gone outside of their own flocks for blood from season to season, and if they have so far perfected their flocks that they cannot go outside them for fear that they will ruin the work they have already done then they have built up strains.

But let us get down to the matter that mostly concerns this article: That there is a strain of White Orpingtons known as the Kellerstrass strain, one that reproduces itself in its beauty and utility features and that has not disappointed those who have placed dependence in it. We all well know what the White Orpingtons were in the yards of fanciers and in the show room before they were taken up by Mr. Ernest Kellerstrass, and he gave his strain of them to the American public. The writer well remembers when the White Orpingtons were a narrow and flat-chested bird of legs and body length, rather than the grand specimens seen today. Most any old cull that had white legs and beak could be sold for a long price. And we are speaking right near the truth when we say that a good many of the culls were sold, much to the detriment of the breed.

This practice has been the ruination of many a bird that has been given to the American fancy. When the stock sent from a breeder's yards does not measure up to the standard that enthusiasts have set for the variety a buyer is always disappointed. The first impression of a fowl either makes it or breaks it with that particular fancier. He either falls in love with them or dislikes them at once. And taking this into consideration does it not behoove a breeder to send out the best he can spare only if he is going to do the best he can for a new fowl just starting on its run for popularity?

But today, through the medium of good illustrations that are appearing in all the poultry journals, the public is well educated in the type that goes to make up the first-class White Orpington. Of course there is a lot of information that may be gleaned from the best exhibits in the show room. But the point is that we as a poultry public are demanding something more than mere name, we want a bird that comes up to its name and fits in general the standard described for it.

When Mr. Kellerstrass began sending out the superb line of stock bred from the strain he had worked on so long to perfect it made other breeders set a new standard. There can be no doubt about this. Better White Orpingtons have been seen throughout the country since the Kellerstrass strain has been the standard by which the variety is judged than formerly. Every fancier who has been much in the show rooms of the country will bear me out in this statement.

The reasons that make the Kellerstrass strain of White Orpingtons premier among the variety are many, principal

The house and barn on Riverdale Farm, owned by H. W. Habach, who produces White Rocks that win everywhere. Write for his catalogue. Address Box A, Watford, Wis.

of which is that the foundation for the Kellerstrass flocks was laid deep in the best blood of the world. Nothing that was good was passed over when this gentleman-breeder was selecting of the choicest specimens to put into the base of his breeding operations. This was years ago. Today we can all see where such a policy was the best to pursue. And in the present day breeding operations we have personally seen on the farm where these superb White Orpingtons are bred that they are being selected with as much care as when the flock was in the making.

Let us take the line of males in the Kellerstrass strain under consideration first: They have Orpington character stamped on them, which is the prime essential. It used to be years ago that another variety of this breed was the one most generally referred to when true Orpington type was spoken of, but today we have the position taken by the Kellerstrass strain of Whites, for they are referred to everywhere as being the bird of Orpington curves and breadth and sizes. Next, the Kellerstrass strain of males have the fullness of plumage (softness of it, too), that goes to fill out the body lines. It might well be said that this has much to do with the Orpington profile that all breeders are trying so hard to perfect. Then this strain is white in color. They are bred white and given every advantage to stay white, such as shade, correct feeding, and not being driven to take the elements which lead to brassiness or straw-color in hackle, back and saddle—top-color, as the English call it.

Pick up a bird at the head of one of the Kellerstrass matings and dig down into his back and you will find white shafting. They are bred that way. Spread his wing, turn it over and look well into the quill of the primaries and there you will find a whiteness that other breeders have been working for for years. This is a characteristic of the flock that may truly be called a strain, the Kellerstrass strain. Take the same bird in hand again and peer into his main tail feathers, going down to their roots. There you will find whiteness reigning again. I know what I am saying when I make the statement that no breeder in the country takes more time and puts more patience into his matings than Mr. Kellerstrass. He knows all the little details that go to make up success. He understands thoroughly that half of the pen is in the male at the head of it, so he chooses accordingly.

The way a male stands on his feet, the manner in which he carries himself, his activity and temperament, are not always taken into full consideration by breeders who think they are mating up their pens, but on the Kellerstrass farm these little details that many would pass over are given attention in particular. A glance through this season's matings on the Kellerstrass farm would further convince you that the males of this strain are being bred with good head points. This is a serious point with all Orpington breeders. Combs of great size are not to be desired. A superfluous number of serrations are always attendant upon the larger sized combs, and these tend more or less to side sprigs. Heavy combs mean thumb-marks. We believe we are getting near facts when we say that no strain is attaining greater success in eradicating these objectionable features of the head points than this one.

Now let us see what the females of the Kellerstrass strain are being bred to. They, too, are true Orpingtons in their size and shape and characteristics. Do you not recall the thirty hens that have been written of so much during the past fall

and this winter? Those big, blocky hens of such excellent type, color, head points, and showing themselves to be the best thirty hens of the variety in existence?

These hens were exhibited at the American Royal poultry show and created more interest than any display that we ever saw. They weighed a trifle less than 300 pounds—to be exact, 297. Did they show their breeding? They did. It was plainly to be seen that they were not the result of haphazard mating and rearing. In head points as well as in other sections and as a whole they were representative of the Kellerstrass strain. Clean cut in comb, neat Orpington beaks, perfect colored eyes, red lobes in all heads, that showed them to be the excellent layers that they are and at the top in show quality.

In body shape these thirty hens were exceptional. Broad, of the right length, deep, set on stout thighs and shanks, shoulders well carried, keels of good length, their shape of backs extra fine, and tails set on at the true Orpington angle. In the breeding pens of this farm this season there are to be found just as high quality females as these thirty. They are specially selected with a view of strengthening the type that this strain has come to the front on. Their equal cannot be found in bone and substance that it requires to make a top quality breeding female.

There is a strain of White Orpingtons which breeders are finding that it pays to put in their yards; they have found that the demand for it is greater than the supply, and this strain is the Kellerstrass strain. It is recognized everywhere as the standard by which other strains are judged. White Orpington stock is difficult to secure of the pure blood of this strain, and we are not wrong in making the assertion that it will be, for some years to come. No fowl has made good quicker with the American public than the White Orpingtons.

The Kellerstrass farm is shipping birds 'round the world. It is true that the sun never sets on them. They are being spread into remote corners of the world, where we have never before heard that pure-bred fowls were shipped. It is but necessary to look over the order books of this farm to bear me out in the wording of the foregoing sentences. And let me add that as famous as this strain is, nothing would have made them so unless it were pure merit.

The annual mating list of this farm is ready for distribution. It is full of meat for all Orpington breeders and breeders of Whites in particular. There are new half-tones of Kellerstrass strain White Orpingtons which will be good models for fanciers to follow. Breeders of other varieties of Orpingtons are falling into line by adding the Whites to their yards. They see the demand for them. They know what the poultry public demands in a good utility bird, and having found that the White Orpington fills all the requirements they are taking it up, assured of a great and steady call for this prince of fanciers' fowls and peer of all utility birds.

In starting in the poultry business, start right; start in the new way. Don't try to hatch and rear a large number of chicks with hens. Get an up-to-date incubator and brooder. These, with good, proper care and attention, mean success.

The egg season is almost here. Have you got your pens properly mated? This is important, as on this depends your success or failure in the show room next season.

Breeding house and yards of H. W. Halbach, Waterford, Wis., the famous breeder of winning White Rocks. The alfalfa in these yards furnishes green food, which is essential to producing the fertile eggs.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to A. T. H. Fortesque, Chatham, Ont., and the second prize to Percy H. Whitney, Atlanta, Ga.

ARE YOU READY?

The Preparing and Running of an Incubator—Caring for Chicks When Hatched.

Getting Ready.

It is none too early to be getting ready for hatching chickens, especially if you have a good warm brooding place.

In this part of my article I would like to give a few pointers on the setting up of an incubator.

It is essential to have the machine level, and it must be clean. Water, soap and "elbow grease" should not be spared. Some disinfectant in the water will make things smell sweet. After it is clean get the lamp going to hurry up the drying.

Look up the manufacturer's instructions as to setting the regulator. One good plan is to place the thermometer on the tray where the eggs are to be placed and have the regulator commence to raise (blow up) when the thermometer registers 100 degrees. By setting the regulator so you will find that for the first twenty-four hours after the eggs are placed in the machine the thermometer will not go up to above the 100 mark, and for the first few days will not register above 101. It is best, in my opinion, to start the hatch slowly. Then as the eggs warm through and the germ starts into life the thermometer will gradually, or should, rise to say 102½, which degree I have found the most satisfactory to bring best results.

I would advise that in order to regulate an incubator properly it is best to run the machine empty for a few days; better still, as long as it is necessary to prove that the regulator works right. During the test, when you think matters seem to be going well, blow out the lamp, let the machine cool off, then start it again and note if still the regulator is true. After a few trials and you think everything is not as it should be advise the makers, who will no doubt fix matters up for you. For my part I have found this expedient not often necessary, nor will you if you have one of the many reliable machines on the market. By no means go in for a "cheap, cheap" machine if you wish for success and want to stay in the business.

Where shall we place our incubators? is a question often asked and answered in many ways. In hatching chickens people have been successful with totally different ways. For my part I believe every house can accommodate an incubator. There is always a room where the temperature wont jump to extremes. As to noise affecting hatch, you will hear many say that perfect quietness is necessary. Now I will just tell you one little experiment on this point that came under my personal observation. The machine under notice was a 120-capacity one, and it was placed in a room where a gasoline engine and other machinery was running almost every day. The room was never cold, but sometimes pretty hot and "smelly." Out of the 110 eggs placed in the machine some twenty were found to be either infertile or weak-germed, so discarded. And out of these ninety eggs left eighty-three of the finest chicks were hatched. So you see, in this instance anyway, noise was not found detrimental to successful hatching. Some advise the

cellar as an ideal place to run an incubator. I have no doubt it is, but here it is well to say that the cellar must be free from dampness so often found in the general run of cellars. Last spring I had the occasional overlooking of a gentleman's incubators who had his three machines set up in his parlor. He had most excellent results. Now my own incubating house is some 25x18 feet and set up on posts and with many windows. This building has proved extremely satisfactory, so you see a dark, quiet cellar is not absolutely necessary for good results. For my part I believe any room will answer well where the temperature is what one might call "comfortable," and free from draughts.

It is well to do all you have to do before placing in the eggs, then if you give the incubator the same chance as the old clucker you are likely to have good success.

How to Run an Incubator.

Now, before I go any further, I would wish to emphasize the advisability of getting good eggs, eggs from the best stock. If buying eggs, get them from a breeder who is in a position to give you the right goods, yet at a reasonable price. Better, at once, look up the good offers displayed in the advertising pages.

Having got your machine into good running order you will then be placing in the eggs. Now this is how I would advise you to proceed. Take a lead pencil and put say a cross (x) on every egg. Place the eggs in a tray, putting the mark on top and well in the middle. See that the ventilator is open. For the first two days there will be nothing for you to do except occasionally to look to see that the temperature is right. Of course the lamp will require attention both morning and night. Better make it a practice of filling it with oil every night. Trim the wick both morning and night. On the third day open up the incubator door and take out the tray or trays of eggs and let them cool. Shut the door immediately. I take it the temperature of the room is comfortably warm. Then place your hand, after a while, on the eggs, and when you find them becoming a little cold, turn them by hand, one by one, putting the mark under and white side on top. By following this method it will insure every egg being turned. Some people commence turning the eggs as soon as taken from the machine, but the reason why I advise letting them cool first is that I find that the eggs that come out of a temperature of 102 degrees need but a very little shake to mix the white with the yolk, and this, after a few days, would mean a rotten egg. If you will take the trouble and watch a hen you will see that it is when she returns to the nest that she commences moving the eggs around. We might as well do the same. The cooling allows the white and yolk to become firm, and by turning gently by hand, which, to my opinion, is "the only way" to insure strong, vigorous chicks. At night again, about 8 o'clock, turn the eggs again after cooled, this time bringing the cross on top, thereby insuring a complete turning without doubts, and a safe one, too.

Continue this method every day, and on the fifth day, at night, test the eggs. With every machine a tester is, or should be, supplied. If fertile you will notice some veins. An egg with a somewhat decided black spot within a sort of a circle means more probably a rotten egg. It might be a poorly fertilized egg or one that has become stale after being laid in one position too long before hatching. Anyway they will not hatch, so take them away. A decidedly rotten egg it will be no trouble to distinguish by the very dark appearance.

The most important point with the embryo chick is to breathe good, pure air. If you leave an egg that gives off a bad odor you are simply killing the other good ones, or at least weakening them somewhat by breathing the poisonous air. Having tested them place the eggs back in the tray with the cross showing on top.

From now on to the fifteenth day the eggs should be turned both morning and night. If you have a large 200-machine with two trays you will get better success if you change the position of the trays every time you take them out. The eggs that pass the night in the front of the machine should be put back by turning the tray end for end, and the tray that remains

the night nearest the lamp should be changed to the other end of the machine and the other one brought into its place.

After the seventh day every night, after the eggs are cooled, take one here and there and test them to see the air cell. If the air cell seems too large the ventilator must be closed a little; if too small open it up a little.

On the tenth day it would be well to go over the eggs again, testing each one to see that no rotten ones have been overlooked. Do ditto on the fifteenth day. If in doubt as to any being rotten test them with your nose, but failing to detect any bad odor let them remain. On the sixteenth, seventeenth and eighteenth day cool and turn the eggs, as usual testing the air cell at night and continue until you hear them chirp or commence to pip the shell.

If the chicks don't commence to pip on the nineteenth day, don't get anxious, but keep turning and cooling.

As soon as the chicks commence to hatch take out the thermometer. By this time you will know just how your temperature is by the position of the regulator.

If you have run your machine well you will not need any moisture, without the climate is exceptionally dry, but if you really think it is needed I would advise you to take a bucket of warm water and soak a cloth or piece of flannel in the water, place on the eggs and let it remain some five minutes. That should do the trick all right. This should be done on the eighteenth day.

Brooding and Feeding.

Leave the chicks in the incubator for a couple of days or so with the temperature at about the same pitch as before. This will give about 90 degrees in the nursery. Then they should be placed in the brooder. On the floor scatter some fine grit and oyster shell and give water. Better place a bag or piece of flannel on the floor under the hover. A thermometer is not absolutely necessary for a brooder if you note the chicks' actions. If the chicks play around that means they are comfortable; if they crowd where the heat comes from you will know they are cold, so turn up the lamp. After they have had plenty of grit you might give them some rolled oats that have been rubbed fine between the palms of your hands, and if you wish one hard boiled egg chopped fine to say every twenty-five chicks. One meal will suffice for the first day. The next day repeat the dose, giving three meals. After a week take out the bag or flannel and scatter chopped straw all over the floor. In this scatter grain—cracked wheat and corn, hulled or rolled oats and a little millet seed. After a couple of weeks some meat and green food may be given.

Do not allow the chicks out of the brooder for the first two weeks. They will by that time have got used to the hover and will know where to go when they feel cold.

A Few Points.

From third or fourth day the temperature of egg chamber should be kept at or near the 102½ mark.

Don't open the machine oftener than is required.

Attend to lamp regularly.

Set a time for turning the eggs and stick to those times.

Don't get anxious.

If temperature should either rise or fall a trifle it does not necessarily mean that the hatch is ruined.

If buying eggs from a distance let them lie for twelve hours before placing in machine.

Chatham, Ont.

A. F. H. Fortescue.

SOLVING THE PROBLEMS.

IT is a highly ridiculous proposition that a man who can find a certain market for his writings on sport subjects should make a wild and uncertain attempt to win a \$3 prize for the best effort in the line of poultry literature, especially as his knowledge of poultry has been acquired in something less than six months. However, he has recently met most of the problems that must be solved at one time or another by the raw beginner at poultry raising, and he believes he has hit on a scheme for getting the most information in the shortest time and at the most reasonable cost.

Before he bought his trio of Rhode Island Reds, along back in the days while his yard was being fenced in, he bought six or eight books on poultry raising. He got most of them in combination offers, taking a magazine for good measure. Most of the books were on the same general subject—poultry raising.

Now it might seem foolish to buy eight books on the same subject. And it would have been if they had all been written by the same man, but they weren't and in consequence he had the views of eight different men on every problem that faced him.

But he did not try to read them all through, one at a time—and now we are coming to the important part. He read in each book the part bearing on the subject that was at that time perplexing him.

Before ever the chickens came it was a question of a chicken house. So he read all eight books on the subject of houses. Now no one of the eight gave him just the house he wanted (and a lot he knew about it, of course). But anyhow he combined houses from two books, built along the lines suggested, and got a house that suited—both himself and the fowls.

By the time the house was built and the money sent off for the Reds the subject of feeding was taken up, all that each book had to say being read. It was put in a peculiarly lucid fashion in one book, and the chicks have since been fed according to those directions.

A spasm of laying by both hens was followed by a desire to set by one of them, whereupon there was a hurry call for the books and all available literature on the subject of a setting hen was absorbed.

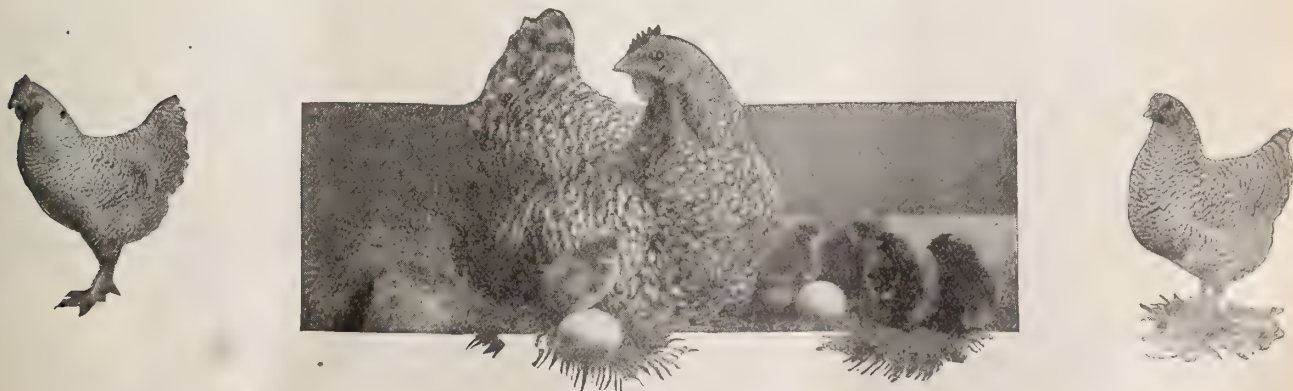

All of this is very simple, of course. But the big point is this, by having a half dozen books or so, a person is not tempted to read all through any one at a sitting. Instead he reads from all books on the one subject before him. He can therefore consider the problems that come up in the light of the information gleaned within a couple of days, instead of wallowing through his memory for a fact stuck in there weeks or months before.

The cost of all this information is marvellously small. The whole outlay was hardly what was paid for one hen. And in consequence of the combination offers a half dozen good magazines come to the house each month—more than are needed, of course, but by the time the subscriptions expire the writer of this highly important addition to the information of chicken raising will know the two or three he wants to take regularly and will act accordingly.

And now in closing here goes for the pith of this scheme once again: If you are an absolute tyro at chicken raising buy three to six good books on the subject, and as the problems arise meet them by reading up the subject at hand in each one of the six. You will have to be particularly bone-headed to go wrong in the face of all that good advice.

OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

The Optimistic Poultryman

Once there was a chicken man who was a cheerful fellow all the time. No matter how much the judges soaked it to him, he would bob up as serenely as ever and say that he would do better next time. The man was so optimistic in all that he said and did that buyers would rather stand beside him for a half-hour chat than go over to the man who had skated off with the ribbons. They knew that the winner was pretty well swelled up over his blues and might slip a couple of eggs when pricing birds to them. It takes a good one to keep it hid even in the sleeve.

The cheerful fellow would smile broadly all the time he was talking to prospectives and sooner or later they would warm up to him and then to cool themselves off would go again to look at the winners before placing orders. But they had not reckoned with the cheerful man. He had dispelled their gloom—the gloom that they had thought hovered over the chicken business—and sowed the seeds of geniality so well that they took root and bore orders for his stock and eggs for hatching. Prospectives came back, and dropped their money into the happy fellow's lap and gave their addresses so he could forward the stuff.

Business was always good with this fellow. He had the smile and was content with what they handed him. From his ads one could see what a cheerful man he was and they relied on what he said every time. He knew that grouches were out of it when it came to the harvest of orders. It got to be such a habit with him that his wife would wake him up in the night and tell him to stop laughing.

When advertising solicitors called on him, he met them and told them what a fine season it was for business. The "boys" would warm up and give him an idea here and there about going after business which were worth all he paid for them and more. When they asked

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the JOURNAL at the expiration of time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

him for a contract they got it and he told them to make good. They did. They had a way of referring to him that made others have confidence in him. You might say that this inexplicable quality of getting orders where others could not was supernatural, but it was not. He had cultivated it from the first and was sincere in it. He was not like the man who told the big story about the lot of stock he had raised and then sanded the track and reversed when the solicitor asked him for three dollars' worth of space in the next issue. No, sir! The inexplicable thing was that everybody was legging for this cheerful fellow. They simply had to tell some other fellow about him.

Advertising? Sure. The best sort of advertising.

About Time

The year book of the Department of Agriculture for 1907 says:

"A poultry feeding experiment was begun in the fall of 1906 at the Bureau quarantine station at Halethorpe, Md., to determine the respective values of the moist mash, dry mash and hopper methods of feeding. Further experiments will be conducted at the Bureau experiment station at Washington, D. C., which is a more favorable location and where a suitable equipment is now being built."

One would naturally think that a year would give some results in the feeding test, but we get the following from the year book for 1908:

"... Other experiments in feeding poultry by different methods are in progress at the Bureau experiment station, but have not progressed far enough to yield definite results."

If a year's time is not sufficient to give them opportunity for a more or less correct solution of the simple experiment they have outlined, when shall we expect results? It looks a deal as if those who are drawing salaries in their connection with the poultry experiments should wake up and do what they have set out to accomplish.

Express Companies Pay Up

Another instance wherein the express companies were made to take notice of the faithless performance of duty of their servants has come to light again in the suit just settled between W. W. Reeder, Minden, La., and the Southern Express Company. Two years ago it was charged by the plaintiff that a cockerel valued at \$50 was suffocated while on its way to the Jeanerette fair. Judgment was secured against the express company, but they appealed. About a month ago the Court of Appeals affirmed the decision and the express company paid him, as well as having to pay all the costs of the suit. The editor of the Southern Poultryman, in commenting on the case, advises breeders in Texas to sue express companies right at home in their justice of the peace courts for small amounts of damage. These cannot be appealed when the suit for damage is less than \$20.

Not long since we know of a breeder sending a bird to a show and having him set out upon a truck long enough to badly freeze both wattles and comb. Such negligence is worth suing them for. Another time he sent a coop of cockerels to a buyer and had all of them arrive with their combs frosted horribly. Do you suppose that a buyer could be made to believe that the combs were frozen after leaving the breeder's hands?

Another express company farce is shown up in the case of a neighbor of ours who shipped one pullet home in one crate for \$1 even, an exorbitant rate, and in another crate were four more, the charges on which were \$1.05! The A. P. A. would have work enough for five years just hammering away at the express companies.

Fall Into Line!

Teaching the young idea how to shoot is the business of our agricultural colleges when it comes to having the youngsters shoot at stock breeding and farm-

ing. But here is a high school that is taking a hand in this great agricultural education uplift and doing the same work that should be done by all the high schools in the land. Albert Lea, Minn., has been known as one of the busiest little towns in the southern part of the state and with its 6,000 inhabitants makes quite a noise up and down the various lines of railroad that get into it.

The first week in January they have a poultry show of some thousand birds, a school for the training of young dairy enthusiasts, a stock judging school, courses in farm crops, horticulture and domestic science. The best talent in the state or in the West, for that matter, is secured to give lectures and demonstrate the ideas set forth. Poultry is judged at the chicken show, dairy cattle are judged under the direction of a skilled breeder, corn is judged by experts and then by the young men who are learning, and prizes are given to the students who are most proficient in their work. This particular week is a pretty busy one in Albert Lea!

The sort of publicity that the Albert Lea fanciers have given the pure bred hen in those parts has a great deal to do with the rip-roaring success of their annual show. Farmers all over the county are seen bringing their birds in to the show and they have them up in nice shape. We have been to the show and we know. The models set by this county in the southern tier of the good state of Minnesota are not to be surpassed. Older established countries could well take advice and pattern from the pure bred stock and corn breeders and directors of the educational idea that are to be found there in little Freeborn county, Minnesota, U. S. A.

St. Louis the Place

No idea caught on so quickly for the place of the next annual meeting of the A. P. A. as the one now spreading—boost for St. Louis. Well, we are all boosting, and will be there, hammer and tongs. Nothing will do more to increase the membership of the association than to have a meeting place here in the West a few times, and it looks like St. Louis was a good suggestion for the coming year, at least. There

has been some objection to St. Louis on account of the alleged heat during the month of August. This will fade away as soon as those who think this point severely uncomfortable during the summer make their first visit there. Hundreds of members have signified their intention of attending if the meeting is to be held in St. Louis, and they feel that they cannot afford the expense in attending if it goes further east. When you, Mr. Member of the American Poultry Association, get your voting ballot this spring, be sure you designate St. Louis as the next meeting place. Do not leave the place of meeting blank, but vote for St. Louis, even if you are not sure that you can be there. Plan to make the trip this year, if you have never made it before.

It will be remembered that at the last annual meeting the St. Louis or Missouri delegation and all those from the Southwest at their backs promised a hundred new members if the meeting would be held there. Secretary Campbell has already received about half this number of membership applications from the regions about St. Louis, thus proving that they mean what they say, and begin to fulfill their contracts when they make them. Boost for St. Louis every minute, and do not forget to vote for St. Louis when the time comes. We predict that if St. Louis is the next place of meeting, that the largest attendance in the history of the association will be the result.

Boost for St. Louey!

Mr. Jones' Troubles

John Jones writes in and requests us to tell him how to make more money from his hens, or rather how to make his hens make enough to care for their own expenses. This is a good deal like running the mill with the water that has passed by. The thing is to get the most out of the hens and the water before it has passed. One of the greatest evils poultry keepers are continually allowing to get into their business is the haphazard way in which they keep their accounts and care for the little details that go to make up success. We would say that nothing so much conduces to success as that little account book carefully kept.

We know one poultryman who does not care to go to the discomfort of keeping an account book with his fowls but his eyes are poor and he cannot be blamed. He keeps track of the expenses and the profits, however, by dropping all the receipts into a cigar box and paying bills out of it. He does keep track of the profits he takes from the box, and one of his mottoes is never to buy a thing for the hens that they do not earn. Practical poultry keeping on the village acre or the town lot all depends upon the man or the woman behind the little enterprise. Pure-bred fowls, clean feed, attention to the little details from day to day and strict cleanliness, are the essentials.

By keeping accounts the little leaks can be stopped. One must know where the leaks in the system are before they can be stopped. Haphazard buying and selling and feeding are the worst enemies of success. Cheap feed sometimes is expensive. One can occasionally buy good feed cheap and should be in position to do this by having the storage facilities. We need more fanciers and poultrymen who know what it costs them to keep their birds and exactly the revenue from them.

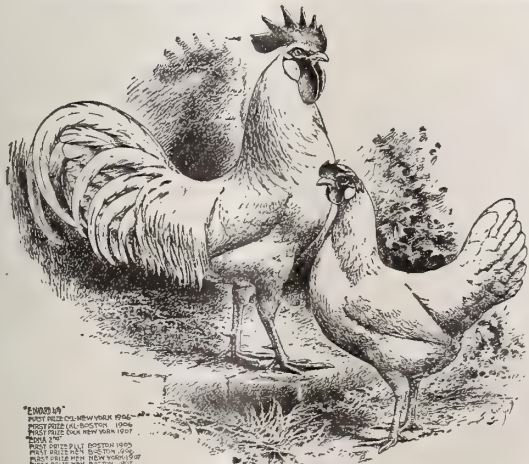

Where Are the Breed Standards?

It is about time for the A. P. A. to give the poultry public more information about the breed standards which were promised the fanciers of the country not long since. Is it possible that the promises are to be overlooked? Fanciers and breeders are waiting for them, and now that we are to have the new standard this fall, why not have the first breed standard at the same time? This should be one of the important items to come before the annual meeting at St. Louis this coming August. From what we have heard throughout the west this season, there are going to be plenty of voters on hand to get the breed standard for Plymouth Rocks through right there at St. Louis.

Ohioans Take Notice

It is said that there will be no poultry course given at the Ohio State Agricultural School this winter. This is a sad

Young's Strain S. C. White Leghorns

I have no other breeds. Another great victory at Madison Square Garden, New York. Again winning for the eleventh time more prizes than all of my competitors combined. After having 119 of my best young birds stolen, my winnings were as follows: Cocks, 1st, 2d, 4th and 5th; hens, 1st and 5th; cockerels, 1st, 2d, 3d, 4th and 6th; pullet, 4th and pen, 2d. Special for best display, special for best male, special for best color male, special for best shaped male, special for best female, special for best head female, special for best shaped female. Spratts' gold special for best Leghorn cockerel, any variety hatched 1909. State cup for best display. Elm trophy for best male. Silver medal for best male. Bronze medal for best female.

You cannot win without my strain. It is the greatest laying strain on earth. Why fool away your money, purchasing eggs and stock from inferior breeders, who have not bred Leghorns long enough to establish a strain, when you can buy from a strain that has been established for 35 years, for the same money or less. The following are the male birds that are heading my thirty yards this year: 1st cockerel, New York and Boston, 1906; 1st cockerel, New York, 1907; 1st cock, New York, 1906; 1st cockerel, New York, 1909; 1st cock, New York, 1909; 1st cock, Jamestown, 1907; cockerel heading 1st pen, New York, 1909; 1st cock, New York, 1910; 1st cockerel, New York, 1910; 2d cock, New York, 1907; 2d cock, Boston, 1906; 2d cockerel, New York, 1909; 2d cock, New York, 1910; 3d cockerel, New York, 1909; cock heading 2d pen, New York, 1907; cock heading 2d pen, Boston, 1907; 3d cock, New York, 1909; 3d cockerel, New York, 1910; 4th cockerel, New York, 1910; 5th cock, New York, 1910; cock heading 2d pen, New York, 1910; 6th cockerel, New York, 1910; 4th cock, New York, 1909, and 5th cockerel, New York, 1909.

Stock and eggs for sale at all times. Send for free mating list.

D. W. YOUNG
Box 1-A, Monroe, Orange Co., New York

state of affairs, and breeders of this state should begin right now to help push through some sort of protest that will not be overlooked in making a winter course in poultry keeping a permanent part of the poultry work at this university. Every state should hold a short course in poultry keeping each winter at its state agricultural college. There is nothing more beneficial to the industry than getting these young people who are interested in agriculture more or less in touch with the possibilities of the poultry business. One educator says that if he may have the youth for five years he can shape his life to a certain extent. If there be anything in this, why not begin getting in the poultry icks at an early date?

Notes of the Month

They tell us that a meeting of poultry show promoters in the vicinity of New York will get together soon and arrange a circuit of dates that will be satisfactory to all. Some sense to this. The various states that have tried the circuit scheme for the larger shows this winter are well pleased with the way their show-city members have fared. This is as good for the exhibitors as for the shows.

In A. P. A. matters there is not much news stirring. The fact that St. Louis is working for the next annual meeting is meaning that she will get it. From the impression created at the last Missouri state show held down there in little old St. Louey, the members of the A. P. A. are sure she will make good when it comes to the new members she promised at Niagara last summer.

At present there is nothing doing in the way of electioneering for the next spring's election. It is well understood out in the central West that Ring would make a good candidate for the office if he would consent to run again. There is a deal of talk for him. As he has not signified his intentions we will have to wait a while anyhow. It looks as if Bryant will again be elected president for about everyone is for him and few against.

A meeting of the Standard publishing and revision committee was called for the New York show. This was to discuss means of expediting the work. The artists were asking for more particular instructions about what they were going to do. These assignments should have been made some time ago. We have understood that Louis P. Graham was added to the staff of artists who are to work on the illustrations, but he says nothing definite has been accorded him. The country is calling for a perfectly completed Standard for the winter shows coming and declare that they must have it and that there is no reason why it should not be out.

The death of C. P. Nettleton, one of the oldest of American fanciers, occurred during the fore part of January. He has been a friend to the Light Brahma breed for many years and his loss will be a great one. Many of the Old Guard are gone, each leaving a place that will be hard to fill.

New York show was a pippin again. No one claimed the \$10 reward for the discovery of "evidences." At least, if they did it was kept mighty dark. Hicks

was down there looking for tenners, but we have not had a report from him as yet.

Everything points to a good season for the egg trade. At the big shows we have seen many good sales of breeding stock, and some large future delivery orders given. Hundred dollar orders are mighty common. Moral: Let folks know it.

Losing exhibitors have a hard time of it all around. They go about with a nasty green taste in their mouths, sometimes, looking a good deal as if they had burst their galls, as H. P. S. would say. It never pays. The cheerful breeder is a winner every time.

At the larger shows there has been a veritable shaking up of the awards. When a breeder gets careless he must take the consequences. Letting in the workers on the ribbons is but right if they have the goods.

Your Uncle John has a way of scolding his brother editors that cross his path. Did it ever occur to you that a great many of us take life too seriously?

Well, if we are going to cut out the "secret" business and borrowing and lending and making fake show reports and all that, why not begin at the next meeting? St. Louis is accustomed to exposures and a few more of our dinky little ones will not make the town fall into the river!

The poultry department of the Connecticut Agricultural College has been favored by the powers that be with an assistant to Professor Stoneburn, in the person of Mr. Charles Stephenson, formerly of Buffalo. The latter will have immediate supervision of the poultry plant at this school and will have more or less to do with handling the students while they are performing the practical work proscribed.

A California man says that by his system of keeping fowls he has made each hen average him a net profit of \$18 to \$20 per year. What that man needs to do is to write a book of secrets or invent a system and sell it for a big figure.

U. R. Fishel says that he will take a position on the executive board of the A. P. A., if the members think he is fit to serve. Other candidates are H. V. Crawford and G. M. Curtis. Political things in the A. P. A. are not rushing this time of the year, but they may warm up a bit along in March.

We recently received the following letter from A. G. Clark, and our readers should take advantage of the opportunity to assist this committee who are endeavoring to collect all the information possible to incorporate in its report to the next meeting of the American Poultry Association:

American Poultry Journal,
Chicago, Ill.

Gentlemen: Kindly bring before your readers again the fact that any complaints they have regarding shipments, overcharges, neglect, etc., in reference to express shipments of poultry, that they will do a favor by sending such complaints to Alfred G. Clark, 406 Williams building, Cleveland, Ohio, for the consideration of the committee who have

express matters in charge for the American Poultry Association.

I have received quite a number of letters, all of which will be valuable when we take up this matter direct with the express companies, but we need plenty of reports so as to have an abundance of evidence to back up our suggestions.

I think without any question that the American Poultry Association can accomplish a great deal of good in this line and make a membership in the association of personal value to every poultryman in the country.

Thanking you for your attention,

Yours very truly,

A. G. Clark.

405 Williamson Bldg., Cleveland, O.

Gleanings From the Journals

By A. B.

The American Poultry Journal has time and again said that now is the time for big things in the poultry business. A perusal of the editorials we have been giving from month to month will verify what we say. All over the country the fanciers and poultrymen are getting ready for the big job of caring for the business we shall reap during the coming years. He is a wise poultry breeder who will let his light shine. Along this line the following we take from that newest of journals, American Poultry World, will only go to show that we have not been alone in our opinion. Personally, we have seen more activity during the past fall and winter among the fraternity than for a great while. Poultry is coming more and more into its own.

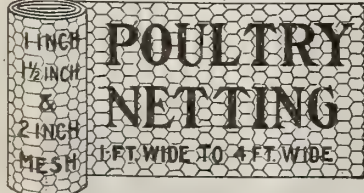

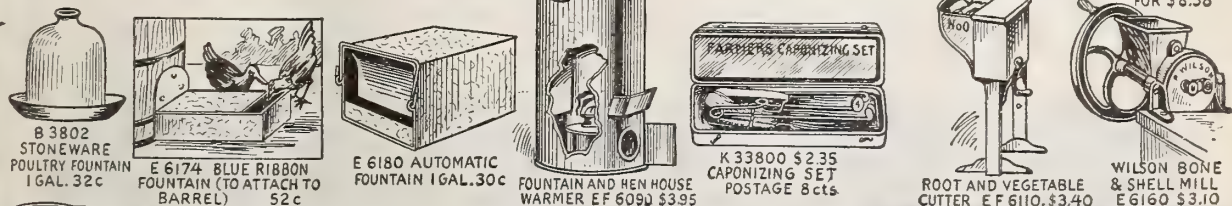

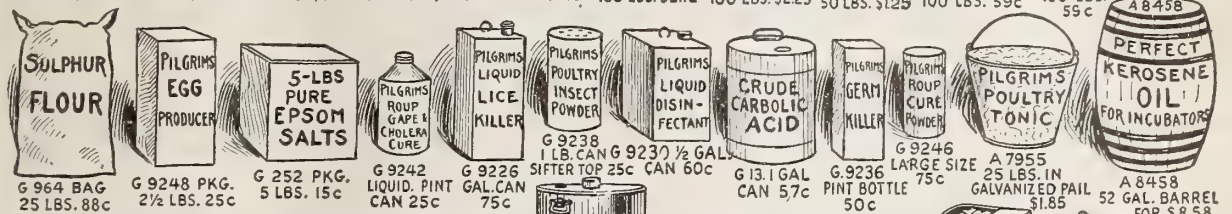

"The Standard-bred poultry business, as well as related branches of the work, are now at the opening of the greatest period of activity and development it has experienced in the history of domestic fowls. It is the duty, therefore, of every earnest, self-respecting worker to get in line with this new movement, so-called, and to lend the influence of his voice and the value of his example to the good cause in which we have a common interest.

"Now, so it seems to us, is the accepted time. Never before have so many of the "right sort" of men and women been engaged in this field of effort. Never before has so much ability and so large an amount of money been employed in, and devoted to, a further development of the poultry business—in its numerous important branches.

"We have gone on record repeatedly, here of late, as predicting that a big uplift and remarkable advance in poultry culture is now at hand, and the developments of each month that passes confirm us more and more in this belief. But it still remains true that the poultry business is to be what we make it—those of us who are actively engaged in the work. Therefore it is of vital importance that every man and woman shall do his or her part."

When is a faker not a faker? And how old is the oldest faker?

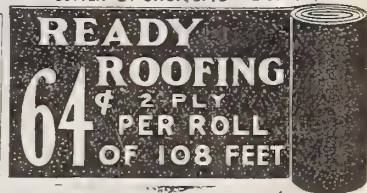

It might be well to ask these questions at this time when all the brethren are having their say. Brother Robinson would say that a faker is not a faker when he is not caught with the goods. The most expert at it are not fakers. The purists say that any man is a faker who puts a bird in other than its natural plumage, the latter including beak, legs and other whatnot. There is some truth

Our netting is of steel wire, galvanized after weaving; is of uniform mesh and double selvage; will roll out flat and straight; does not sag when up; is the best and finest on the market. Sold in full bales of 150 ft. only. Prices 73 cts. and up. The 3 ft. wide 2 in. mesh is \$2.14 per bale. See catalogue for low prices on poultry netting, fencing, etc.

Save Money on all Poultry Supplies

We have been headquarters for money saving for thirty-seven years. We buy in car lots from the makers and sell direct to users, thus saving you all intermediate profits. Our goods are all standard makes and honest grades, and are fully guaranteed to suit you in every way or we will refund your money on return of the goods.

C 262—Made from selected long fibre wool felt, saturated with waterproof composition. A solid, flexible fabric. Good for roofs and sides of hen houses, and many other buildings. Caps, nails and cement are extra. See catalogue for prices of all kinds of roofing and other building materials, as well as of everything you eat, use and wear, all at lowest prices.

We Sell Everything that you use, eat or wear.

Our large, new catalogue, No. 78, shows our full line. All the goods shown in this advertisement and 125,000 other articles are fully described in the big catalogue. You may order any goods from our Chicago house at prices here quoted, or you may send for a free copy of the No. 78 catalogue and read full particulars of all these goods and many more you will want. Try to make your order reach 100 lbs. or more in weight, and have it sent by freight. That is cheapest for you. Where we quote postage it means that if you order a single item by mail that amount of postage should be sent in addition to the quoted price. If you order that item to be sent with other goods by freight or express you'll save the postage.

NOTICE: We have stores in Chicago and Kansas City. If you live west or southwest of Kansas City write for our special Kansas City catalogue and order from our store in that city, from which point only you will pay freight. All others will send to our Chicago house and pay freight from Chicago. With any goods you order, ask us to send you a large, new catalogue No. 78 and we will help you save some money. Send for the free Catalogue, anyway.

in the definition of a faker when it is put in this wise. Just where all this talk and palaver is going to lead to has not as yet been decided, but it looks as if some of the good men and true, or those who consider themselves as such, were going to bring up a lot of the matter at the next annual meeting of the A. P. A. in St. Louis. Some one suggested a white diarrhea congress when the journals had this on the brain or in their ink pots a few seasons ago, and it might not be out of place to call a fakers' and non-fakers' congress at St. Louis after the A. P. A. gets underway with whatever house cleaning it undertakes at its next session.

The common herd of us who are not satisfied with a few dollars per hen profit per year are not doing the hotfoot after the systems that will give us the mighty profits that they assure us. In some instances the profits per hen can be greatly

rates of carriage on merchandise. Well, here's the letter from the N. P. A.:

Weedsport, N. Y., Dec. 1st, 1909.

To the President and Congress, Washington, D. C.

Dear Sirs: Are you aware that the hustling hen represents big money? That she is of much greater importance to the people of America than Aldrich and the Standard Oil Company? Than Cannon and his bargains? Than Smoot and the Mormons? Than Penrose and the Pennsylvania? Than Peary and the Pole? Than Roosevelt and 1912?

Well, she is.

Do you know that she produces more value than wheat, corn, or cotton?

Well, she does.

Are you aware that every man who voted for you—and who may vote for the other fellow—wants the hen or her fruit far more than he wants to see the express boodlers pile up more dollars through a corrupt plunderbund?

milk and other dainty bits that will tempt the birds and then fill them up on corn after they have eaten all of other feed they can be induced to take. In the article in the above journal we find that the motive for night feeding is to increase the winter egg production, more or less new as an idea, though we believe that there have been some comments on the subject in the past. Read part of what Mr. Bent has to say:

"I think it will be generally conceded that the one great cause for light winter egg production is the short days, even more than the cold weather, for even in mild climates it is about as difficult to get eggs in winter. The hours of daylight are too few to permit of the fowl consuming and assimilating sufficient food to renew the tissues and supply the heat, which are the first demands, and leave any surplus for eggs. In the short, cloudy days there are scarcely more than six or seven hours of daylight out of the

increased by following some of the systems' ideas, but we might say that too much should not be credited them, though they all have done more or less good and convinced the poultry public of one thing: That fowls can be kept at great profit in small enclosures by the intensive methods of handling them.

The National Poultry Association has been heard from again recently and reports that it has bombarded Congress and the president with a letter which we give here. The letters that will do the most good, however, to choke off the express companies are those written to the congressional representatives from our various districts. Every chicken man can spare the time and should drop a line to his representative in Congress without much expense, and the good that would come of it would be inestimable. We must have a parcels post and then the express rates will come off their high perches and something will be done by them to get into competition with the parcels post system, thereby lessening

Well, he does.

Don't you know that the people of this country do things when their patience is worn out?

Well, they do.

Now get busy.

Omit the talk and promises. We are tired of both.

Do things.

Strangle the express robbers.

Give us a parcels post system.

Very truly yours,

The National Poultry Association,
C. F. Townsend, Pres.

The American Poultry Advocate for January contained a very good article on feeding fowls at night. It is well known that winter days are hard days for the fancier to put gains on late hatched chicks and that to do it successfully we must feed them at night as well as during daylight. Those of us who have given the work a deal of thought and tried feeding youngsters after night in order to make them come to show condition quicker than ordinary, use bread and

twenty-four, or about one-fourth, for hens will be found on the roost by three o'clock. The time allowed for eating and exercising is too short, for fowls must exercise as well as eat in order to lay.

"But what can be done? The general scheme of the universe would be difficult to change. The only remedy is to turn part of the night into day by artificial light. This could be easily done and in many cases without much expense. Many poultry plants are located near or in towns having electricity, and if not, kerosene could be used. If fowls were to be fed whole grain in litter at night they would of course require more light than to eat a mash or whole grain in a trough. It is useless to lay down any definite plan without even having tried the experiment, but it occurs to me that I would adopt the following plan of feeding if I were to try it. I would give a feed of whole grain in the morning in deep litter and another after dinner, and be careful not to make it too heavy, but just enough to induce vigorous exercise, using corn and

Are All Recognized Poultry Systems BACK NUMBERS?

Read how two city men, with only four years experience, cleared last year \$6.41 per hen, or

OVER \$12,000 PROFIT

On 1953 Laying Pullets

THE ordinary poultryman will say it can't be done—that \$2 to \$3 per hen is the very utmost that even an expert can make, clear. He will say that even if a few experienced men could make \$6.41 per hen, it is impossible for two mere beginners to do it.

And yet that is exactly what the Cornings, father and son, DID DO LAST YEAR. Starting four years ago with only 30 hens, with no experience, with Prof. Gowell's bulletins as their foundation, with many experiments and much hard work, this was the result last year—over \$12,000 clear profit. Read the whole story in our

Corning Egg-Book

(entitled "\$6.41 per Hen per Year"). Not what the Cornings might do, or could do, or want to do, but what they DID DO. Facts, figures, names, dates, photographs of their plant, plans of their houses, all proving the remarkable claims.

Where the \$6.41 profit is made

The FARM JOURNAL, always a poultryman's paper, takes special pleasure in being the medium of publishing the Cornings' methods and achievements to the world. Our offer is, we believe, unequalled in the history of poultry journalism; here it is:—

FARM JOURNAL two full years
Copy CORNING EGG-BOOK, postpaid }

ONLY 50 CENTS

Book and paper may go to different addresses if desired. Our "POULTRY SECRETS" book may be substituted for a CORNING EGG-BOOK if desired. Both books with FARM JOURNAL 4 full years, only \$1.00.

FARM JOURNAL is the standard farm and home paper of America. Its poultry department is famous for the practical value of its contents. Made for the poultryman, fruit-growers, truckers, stockmen, dairymen, suburbanites, village people, housekeepers, boys and girls. It is clean, bright, "boiled down," intensely practical. "Cream, not skim-milk," is its motto. It is thirty-three years old, and known everywhere. "Judge Biggle" and "Peter Tumbledown" are characters better known to many than Hamlet or Micawber. It is well printed and illustrated. It has more than 650,000 subscribers, but won't be happy until it gets a million, which it expects in 1910. More than half a million of its subscribers pay five and ten years ahead, which shows rare confidence in a paper. It never prints a medical, fraudulent, or trashy advertisement, and it is famous among high-class advertisers for its extraordinary "pulling" power.

Must Recognized Theories be Discarded?

The reader of the Corning Egg-Book will draw his own conclusions. The book tells everything—where the Cornings find their market, why they raise only white-shelled, sterile eggs, how they keep hens laying regularly in winter, when they hatch chicks that are to do their best work in December and January, how to mix the feed that produces the most eggs, how to prevent losses, how they found the best breed for egg-producing, and how their whole system works to that one end—eggs, EGGS, EGGS. It gives photographs of their plant, and complete working plans of their buildings, which can be made in sections, large or small, as needed.

Next year the Cornings expect to have twice as many hens, —that is, 4000. Will they make twice \$12,000?

oats in the morning and wheat at noon, or vice versa. I would give the next feed at about eight or nine in the evening, alternating a properly balanced so-called warm, "wet" mash with one of cracked corn, but have the latter warmed or slightly scorched. If the hopper system of dry feeding ground feed is used I would cut out the noon feed or whole grain and open the hoppers at noon and close them again at night or early in the morning. Under no circumstances would I feed whole grain in hoppers nor would I leave hoppers open all the time. I have found both very detrimental either for egg production or breeding purposes. Yet hopper feeding is a good thing, judiciously employed, but mark the word "judiciously." It is surely a great labor saver. However, I am not one of those to condemn the wet mash entirely, and believe it a good thing once or twice each week. Many things can be worked into a wet mash that would otherwise be lost, and it serves to provide variety, which is essential. By the term wet I do not mean "sloppy," but simply nicely moistened. This plan of feeding at night would stretch out the eating hours about the same and as long as in summer, except the hens would eat later at night and not so early in the morning. It is possible that it might be found advisable to carry this plan a step further by getting the fowls up earlier in the morning. This could be done by an automatic clock attachment that would switch on the electric lights at, say, 5 a. m. This would cause them to get down from their perches and go to scratching. Grain could be scattered in the litter as the lights were turned off at night and be there ready for them. Some might not find it convenient to give the night feed who could easily install the automatic clock attachment and scatter the grain in the litter at supper time. It is possible that feeding both early and late, which would make four times a day, would overdo the matter, but I am inclined to think not where it was desired to force to the limit."

We append here a couple of the questions that will be asked of most folks who will be approached by the census enumerator during the taking of the census this year. It will be well for chicken folks who want to make as good a showing as possible to have their figures down in black and white so that we may do our share toward getting something near the actual value of farm and village and town poultry reared and sold.

Poultry—A statement will be required

of the number and value of chickens, turkeys, ducks, geese and guinea fowls on hand April 5, 1910. Separate reports may be required of those under three months old and those over that age.

Poultry and eggs—The following questions will be asked concerning poultry products in 1909:

Value of all poultry raised; amount received from sales of poultry; dozens of eggs produced; dozens of eggs sold; amount received from sales of eggs.

Poultry Culture says something editorially about the work of keeping fowls and the great health that such outdoor work gives those who go into it with the idea of doing something that will pay for the time they put into it. The poultry journal that takes up this matter in the general literary magazines and offers a course in poultry keeping for those who are going into it every year, with health as the main object sought, should do a good subscription business. The dairy cattle breeders are using the general magazines to advertise their specialties and it might be worth trying to offer the intending poultry keepers, who are going into it for their health, some advice, and show the lungers and other physically incapacitated folks that poultry keeping will pay them well for their efforts in it and at the same time get them in excellent physical trim.

Field meetings and poultry picnics are getting to be the real article. Out there on the Coast they are holding poultry picnics every month or two on some poultry ranch where the keeping of fowls for the eggs they will produce is a leading business. Editor Harker of the *Fanciers' Monthly* has something to say of these from time to time and it looks to us as though such meetings are the means of doing a lot of good. Fanciers and poultrymen who are vitally interested in the business can get some good ideas in return for their own, in such an exchange as these picnics and field meetings. It is very seldom that fanciers can meet in such numbers as to enjoy a poultry picnic. Near the large cities and in communities that hold shows little monthly meetings of this nature would not be out of the way at all. It was not so long since that we gave in these columns a write-up of a county poultry association that held an annual picnic that tended to bring the fanciers together more than once a year and helped to keep things warm during the season when poultry en-

thusiasm was needed. The idea is a good one and should be emulated.

In these days when we see so little about waterfowl in the various journals anything good is particularly interesting. We find a note in the *London Feathered Life* about Embden geese that is well worth giving in the *American*. Whether it is considered that waterfowls eat too much in these days of high-priced grain, or that they are overlooked in the hustle and bustle of making our hens lay more eggs and mature quicker, we cannot say. There is good reason why waterfowls should be reared on every farm that has some good pasturage and of the smaller varieties that are renowned as layers there is no reason why they should not be kept even in confinement more generally than they are. There is some good, practical matter in the following:

"As to the reason for the association by name of this variety with the place named Embden, in Westphalia, it would be difficult to account, and it does not appear that any satisfactory explanation is on record, but the point is of no practical importance. What is of interest to note is that, although it differs in color, and to some extent in contour, from the Toulouse, it would be difficult for practical producers to decide which of the two varieties is entitled to the first place in point of merit; and it is, perhaps, no exaggeration to say that the majority of producers solve the difficulty by crossing the two varieties for the production of the best goslings for table use. Its characteristic color of plumage is a spotless white throughout, and any other color, or spots or splashes of color, indicate impurity as regards the ancestry of a strain. As regards the character of the plumage, the feathering is close, and the neck feathers arrange themselves more or less in ridges, and the general contour and carriage of the breed is rather more graceful than in the Toulouse. Length and straightness of head are characteristics, and the bill is short and stout. The neck is inclined to be long, in uninterrupted continuation of the lower mandible, and gracefully curved and carried. The body has breadth and depth, the back length and straightness, and the breast solidity. The tail is horizontally straight, and its feathering close. The wings are very powerful in striking, and large when spread, and the legs are short, thick, and firmly set. The carriage is inclined to be generally upright and tall. The bill, legs and feet are orange in color, and the eyes light blue."

43 Varieties

Poultry, Squab Breeders, Fancy Pigeons, Ducks, Geese, Guineas and Eggs. Ornamental Birds, Wild Game, Pheasants, Pea Fowl and Dogs. Old Trusty Incubators, freight paid. Feed and Supplies. Handsome Catalogue, containing 150 illustrations, 2c.

The Greatest Poultry Catalog Ever Published—Over 80 Big Pages

Never in the history of the Prairie State Incubator Co., have we ever compiled a catalog that anywhere near approaches our 1910 book.

It is a book everyone will feel fortunate to possess—will cherish and carefully preserve for reference because of its helpful and valuable information. Over 80 large pages—65 of them are devoted to such interesting topics as mentioned under "Contents."

These articles are not based on theory. They are not "hobbies," not "pet ideas" of poultry cranks, but the cumulative experiences of leading poultrymen.

To the beginner these articles are of inestimable value. They'll start you right—save you loss of time and money and, above all, avoid the disappointment so common to

a large majority who enter this line of business.

It is information you can't buy—no text books supply it, and that's why we say it is the greatest poultry book ever published.

In the back part we fully describe our 1910 machines—the best we ever produced, and we confidently believe that

SOME OF ITS CONTENTS

Poultry Possibilities on the Ordinary Farm.
Which is the Best Breed?
Selecting Breeders.
What System Shall the Poultryman Use?
The Intensive or Extensive Plan.
Colony House Method.
Care of Brooders.
Selection of an Incubator.
Poultry Buildings.
Principles of Feeding.
How to Feed Laying Stock.
Fattening—Feeding little Chicks.
Lamp or Fireless Brooders.
Growing Green Ducks.
Diseases of Poultry—Prevention and Cure.
Handy Poultry Appliances.
Feed Formulæ.
Description of successful hatching and brooding appliances.
Many other useful topics.

With this Valuable Book and 1910 PRAIRIE STATE Machines Success is Sure

The Sand Tray Prairie State Incubators

are without question the most advanced and most perfect hatchers on the market. The majority of State Experiment Stations endorse them—the public prefer them wherever their good results are known.

They have equalled the "old hen" in producing chicks that live—that are big, strong, full feathered and equal in every respect to chicks hatched under hens.

Prairie State Universal Hovers and Colony Houses are solving the problem of rearing. They are reducing the death losses to a surprising minimum and shortening the marketing period by inducing faster growth and development which means much greater profit.

Why experiment? Why not get the best at first—it's the cheapest by far in the end. Why not get equipment that the leaders in the business prefer?

Make the Right Start by Sending for this Book Today

Even if you are not ready to buy—we want you to have a copy anyway. Tell your neighbors to send for it. We have such implicit faith in the good it will do we want everybody interested in poultry to have a copy.

While we have printed a large edition it may be necessary to print an extra edition, meaning a delay—so send today. First come, first served. A postal will do.

PRAIRIE STATE INCUBATOR CO., 468 MAIN ST., HOMER CITY, PA.

The New York Show Report

(Continued from page 202)

The report of following classes was received too late for classification.

Our editor this time has given me a rather hard task at the very last moment. He came to me about 11 o'clock Saturday morning and asked me to write up the Dorkings, Asiatics, Hamburgs, Orpingtons, Indian Games and Minorcas.

This was impossible for me to do in a way that should be a credit to myself and to the A. P. J. Some of the birds I had to give just a superficial glance and the others I have tried to give a better account of.

In the Light Brahmas, the classes were well filled. The River Home Poultry Yards from Ohio, coming along with a very good string of birds which made Balch and Brown and Klee Bros. sit up and take notice.

The first cock was a very strong bird, well striped in hackle and good size. Second, was very much like it. Third, also good type. Fourth and fifth, suffering from lack of condition. First hen was shown in remarkably good condition, seeing that she had traveled from Ohio, and she was a very good type. Third, very much like her. Second, Klee Bros., a splendid hen, will be heard from later. First cockerel was a great fellow and will be heard of again.

Buff Cochins made one of the best displays seen at the Garden for quite a long time, and it reminded one of the time when those Giants of the Fancy were contesting for the honor. Partridge Cochins were represented by a very few from the yards of Geo. W. Mitchell, whose name is synonymous with the best in America.

In the White Cochins, Mr. Rose, the Canadian exhibitor, came down and disputed with Mr. Anderson his right to all the honors in this variety, and he won first cockerel and first pullet. We did not think that Mr. Anderson showed his

birds in as good condition as usual this year.

In the Dorkings, it was a battle of those Giants, Jacobus, Westfall and Hale. It decided in a good run in favor of Westfall. First cock, a cracker-jack, possibly the very best silver grey ever shown in New York. The breast, tail and under parts, a pure glossy black with top color like a White Leghorn. Splendid head, typical in every way. Second cock, not at his best, very large and extra long in body; good black breast, tail not full, pure clean top color; will do better in two weeks or more. Third cock, much smaller, very stylish, neat looking bird. Breast and tail fair, has an over growth of comb and white ear-lobes. Fourth, a great big coarse bird. First hen very good in all points. Large and rich color, and little pinched in tail. Second, a great deal of the same order. Not as good in color. Larger put back on account of poorly moulted tail. Third, fine form, though very much smaller; very poor in back color, which evidently gave her this place. First cockerel, typically shaped Dorking, sound black breast and under parts. Extra long flowing, hackle and tail. Second, much smaller, not as full in hackle and saddle, nor near the length or depth and fails in breast color. Third, larger than second, better color, quite nice cockerel. First, beautiful pullet, soft color, free from shafting. Second, not as large, and taller with a poor hackle. Third, still smaller, not as good in breast, but better back color. Fourth, rather a different type from those above, very neat, pleasing appearance and a very taking hen.

Buff Orpingtons—Here we had a great display of good quality birds. The prize winners could have been taken out and five more could have been classed fit to win in almost any competition. The first Buff Cock, a remarkable bird, worth its weight in

gold. Splendid shape, good type and large, set off with a good head. Second cock, not as large, fair, good type with a neat head, but rather a poor eye. Third, very level color, not good in breast, good eye, high on leg, still a rare good bird.

Hens—First, fourth and fifth, all belong to Sunswick and made a very good team. The first is a nice soft color, very good type with a good eye. Second one was not to our liking, too cochiny, very small bone and too low leg. Third, a good one, failed a little in condition but our choice for second. This certainly is a bird to go in a show pen or the breeding yards. The sixth hen was a beautiful light color and could have been placed higher. Single Comb Cockerels—First, a bird that handles well, good type, solid color and should make a rattling good cock bird. Is not as coarse in head points as some of those that Mr. Cook has won with before. Second, a fine bird all through and should be a better cock bird than cockerel. Third, rather darker than the others, good keel, tail carried low. Fourth, dark, rather high on leg, and little pinched in tail. Fifth, good type, but small and shows white in tail. Sixth, high on leg, narrow on saddle, too much cut away in breast.

First Pullet, one of the best pullets ever shown in the Garden, good type, in fact, good all through. If I am finding a fault, I would say a trifle dark in color. Second, a good pullet, trifle dark on top with light under color. Third, a beautiful soft color pullet with a splendid eye and good tail. Fourth, a nice colored pullet. Fifth, a good pullet showing lacing on back.

Black Orpingtons.—First cock a great bird, splendid shape and good in all points. Second, a good one with a neat head, carries tail a trifle high. Third, a smaller bird, but full of quality and son of the great Nabob, and full of his father's quality. Fourth, a trifle heavy in tail with rather small bones, but will make a good breeder. Fifth, was another good one. First hen, a splendid hen all through with a lovely beetle plumage. Second, a

X-RAY INCUBATOR

This is the Machine, Madam, that will turn the trick for You—

You've found incubators nearly all alike—a little difference in "talking points"—that's all. Here's the machine that's different. Try it. Different in principle; different in results. Lamp right in the middle; perfect distribution of heat; perfectly even temperature; perfect ventilation; no heat wasted. Enameled-steel-covered, rosewood finish, bottom and all.

ONE GALLON OF OIL FOR A HATCH—We Guarantee it

That's one of the wonderful advantages of the X-Ray over other incubators. They waste the heat—we control it. They keep the lamp burning always at the same height, and allow the heat to escape when it gets too hot. The X-Ray shuts off at the burner. That's why other people fill lamps daily and use 3 to 5 gallons of oil for a hatch. We fill the lamp once—**only once**. We use one gallon of oil—**only one**, for a hatch.

The Only New Plan Incubator

It means less egg-handling, less oil, less heat generated, no waste, no filling of lamps during the hatch, absolutely no fumes, absolutely no danger of "cooking" eggs, but even heat always over the whole chamber.

It has the true way of ventilating—just like the old hen ventilates. Double glass door at the top—not at the side. Simply raise the lid, and let the heated air carrying the impurities from the hatching eggs pass off.

Our heating system restores temperature in 15 minutes—other incubators take 4 to 8 hours to "heat up."

Try It for 3 Hatches

Thermometer always in sight. Eggs need not be removed during entire hatch. You must see it and try it to really appreciate it. Our guarantee fully protects you if the machine is not as represented.

GET OUR FREE CATALOG and know all about this famous hatcher—the machine for results. It is fast pushing the old-style incubators aside. You'll see all the reasons why when you read the book. Address today

X-RAY INCUBATOR COMPANY,

1st Street, WAYNE, NEB.

Over 30,000 in Successful Operation

The Famous Peerless Incubators and Brooders

I have thousands of testimonials from all over the world showing that by actual test the **Peerless** surpasses all others for hatching and raising chicks. The U. S. Government has granted me numerous patents on incubators and incubator appliances. You can secure the benefit of these patents **only by buying the Peerless.**

The **Peerless** is equipped with my **Tandem Double-Compound Thermostat**, the most sensitive, most accurate and most powerful thermostat ever invented.

The **Peerless Hot Water Tank** is made of heavy, Cold-Rolled Copper and will last indefinitely. This is a great saving over the old fashioned galvanized tank, which often rusts out with one season's use. The Central Return Pipe acts as a siphon, forcing a continuous and rapid circulation of hot water. The **Heat Retaining and Distributing Bars** attached to the solid copper Tank equalize the heat and produce a uniform temperature throughout the egg chamber. This saves oil, as less heat is required.

Then there is the **Automatic Regulation of Heat, Moisture and Ventilation.** The **Acme Trip Burner** keeps the flame at just the proper height, saving at least one-half in oil.

The **Acme Automatic Safety Lamp** not only makes the **Peerless** insurable, but eliminates all possibility of fire. These are but a few of the many advantages the **Peerless** has over all other incubators and brooders.

I Will Send You a Peerless Either Knocked Down or Ready for Operation

I want you to know all about the wonderful **Peerless**, so send for my big new **Catalog and Book of Plans. It's Free.**

For Those Who Want to Build Their Own Incubator

I supply absolutely **Free**, simple plans whereby anyone can build an incubator or brooder. These plans show every detail of construction so clearly, and the instructions are so complete that any boy or girl, by following the plans and using my supplies, can build an incubator or brooder that will give good hatches and raise all the chicks hatched.

By the use of my perfect incubator supplies, you can remodel an incubator or brooder, of any kind, that you have discarded and make it a good operating machine. Many people have built, according to my plans, incubators and brooders that they are proud of. The knowledge and pleasure, as well as the experience that is gained by building an incubator or brooder is worth a good deal. To learn more about this plan of **building your own incubator**, write for my catalog and book of plans. **It's Free.**

it reduces the operating expenses of incubators and a Wafer Thermostat. To learn more about this wonderful Thermostat, send for my complete Catalog. **It's Free.**

The Tandem Double-Compound Thermostat

marks a new era in Heat Regulation. It eliminates all regulator troubles. It is so powerful that it operates both flame controller and damper as easily and more accurately than any other Thermostat will operate damper alone. Used in connection with my **Acme Trip Burner**, brooders 50%. The Tandem Thermostat can be instantly attached to any style regulator using

There is no expense to operate, no lamp to fill or trim, and no danger from fire. To learn more about this wonderful Brooder, write for my Catalog. **It's Free.**

The Peerless Lampless Brooder

The most convenient, perfect and practical brooder ever invented. It is self-regulating and self-ventilating. No matter how cold or wet the weather may be, this brooder will hover and mother chicks even better than an old hen.

The ventilation is automatic and controlled by the regulator. Chicks raised in the **Peerless Lampless Brooder** are sturdier and larger than those raised by any other method.

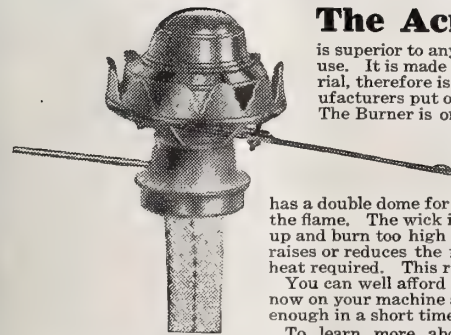

The Acme Trip Burner

is superior to any burner for incubator and brooder use. It is made of good, strong, substantial material, therefore is unlike the flimsy affairs that manufacturers put on incubators to keep down the cost. The Burner is one of the most important features of an Incubator or Brooder, for lamp troubles can usually be traced to inferior or defective burners.

The **Acme Trip Burner** has a double dome for the supply and regulation of air to the flame. The wick is so arranged that it cannot flare up and burn too high or too low. The trip attachment raises or reduces the flame according to the amount of heat required. This reduces the oil expense fully 50%.

You can well afford to throw away the old cheap burner now on your machine and buy an **Acme**. It will save enough in a short time to pay for itself.

To learn more about the wonderful **Acme Trip Burner** write for my Catalog. **It's Free.**

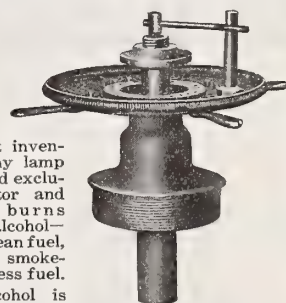

The Acme Alcohol Burner

This is my latest invention. It will fit any lamp bowl. It is designed exclusively for incubator and brooder use. It burns cheap, denatured alcohol—the new fuel, the clean fuel, the safe fuel, the smokeless fuel, the odorless fuel.

Denatured alcohol is rapidly taking the place of gasoline, kerosene, etc., for lighting, cooking and heating. It is the best fuel that can be used for heating incubators and brooders. It is the most modern of all fuels and for sale everywhere. If your local dealer cannot supply you, I will, direct, at wholesale prices.

The **Acme Alcohol Burner** is absolutely fire-proof.

To learn more about this wonderful burner and denatured alcohol, write for my Catalog. **It's Free.**

My Combined Catalog and Book of Plans is the Finest Book of its Kind Ever Published.

It contains more than 100 photographic illustrations showing, step by step, how **Peerless** Incubators and Brooders are constructed and how easily you can build them yourself.

The Famous **Peerless** Incubators and Brooders and my full line of appliances are not made to be sold at bargain counter prices, but are made to give lasting satisfaction. You may buy supplies at less price than I sell them to you, but, in doing so you are throwing away your money. When you buy from me you may forget the price, but the service and durability will always remind you of the quality.

Write at once for my free catalog and free book of plans. A postal will do. It will be money in your pocket to do this at once.

H. M. SHEER COMPANY,

A-5 Hampshire Street,

QUINCY, ILLINOIS.

good hen rather on the Cochin type, too low on ground. Third, a good hen something on the type that won last year. Fourth, a good hen.

Cockerels.—First, a fine bird. Large, good cockerel, good type with no real faults showing. Second, a little high on leg and not as deep on keel as the winner, still a very good bird. Third, a very good colored bird. Fourth, very taking, and fifth, another good one. Pullets, first, a rattling good pullet, large, good shape, good color, a shade high on leg. Second, a good pullet, rather too much pushed out in comb, but very blocky in type. Third, another good colored pullet, and good type. Fourth and fifth, rare good pullets, and the sixth was very much on the same order as the first.

White Orpingtons.—The Owen Farms simply outdid themselves with a string of imported birds, showing them in beautiful condition and turning out the greatest piece of laundry work that has been seen in the Garden for many a day. These whites were shown beautiful. In cocks they run first and second with birds that were grand in every respect. The second had rather a better type, but was beefy in comb. The first was a good bird and shown in the pink of condition. Third, was a good bird, not shown to good advantage. Fourth and fifth, were good birds, suffering a little from a long journey. In hens the story was repeated. Owens came in with two beautiful birds, good all through. The second one, a trifle deficient in breast. Third, a very good type of bird. Fourth and sixth, good hens, rather out of condition.

Cockerels.—First, not as deep in body as last year's cockerels, but still a rare good bird, with splendid type and pure color. Second, a good white bird, trifle pinched in breast, good head and not so large boned. Third, on the same order except showing a little white in lobe. Fourth, a good bird, not showing well. Fifth, could have been placed higher and no harm done.

Pullets.—First, a crystal white, very good pullet, extra long in back. Second, another crystal Orpington, good type, but raised by a different breeder. Third, another crystal pullet not shown in the best of condition. Fourth, a very good one, and fifth and sixth were good pullets.

Black Minorcas.

There was quality to burn and I was sorry that I did not have the time to go through them as I should have done.

First, cockerel was a big stylish bird, good lobes, good color with a well serrated comb. Second, was very much of the same type and well worth its place. Third, not as good in lobe, nor in as good condition, but a remarkably large bird. First hen, very big bird, good comb, good color and nice lobes. Second, good size hen with good color and head points. Third, smaller, good type bird, poor lobe with a good comb. Fourth, a rare type bird, seems to have been misused. Quite a few broken feathers. I understand she traveled quite a distance and may have got roughly handled with the express company. First cockerel, a strapping big bird, good color, good lobes and good comb. Second, smaller with a nicely serrated comb, good lobes, a quality

bird throughout. Third, a fair size bird, ragged in tail, and puffed in face when I saw it.

Pullets.—First, a very nice bodied bird with a very neat head and good lobes. Second, not so good in color, good shape and with a very good comb. Third, good shape bird, but lacking size. Fourth, a very large size pullet, but poor color.

In Hamburgs there was very little competition, especially in blacks, silver pencilled and gold pencilled. Except gold pencilled hens there was one of the best gold pencilled Hamburgs I ever saw brought to light. She has a beautiful head, a fine Hamburg type all through with lacings that are a pleasure to handle. She certainly is an ideal hen. Second, are not so distinct and lacing, and third are only fair. In silver spangles, there were a couple of cockerels. First cockerel was a big, well spangled bird with a well worked comb and good lobes. Second one, in not quite as good condition, still a very good bird. First hen was a good, large, well spangled bird with very neat head points. Second, was not as large, but equally as good. Third, only fair. First cockerel, a good bodied bird, well spangled with good sickles and fairly good head. Second cockerel, good head, well worked comb, nicely spangled, and good length of feathers, but carried tail a trifle gay. Third, very fair bird. First pullet, a good, well spangled bird, but with very poor spike. Second, nicely spangled, but smaller and poor lobes. Third, very poor comb.

Indian Games.

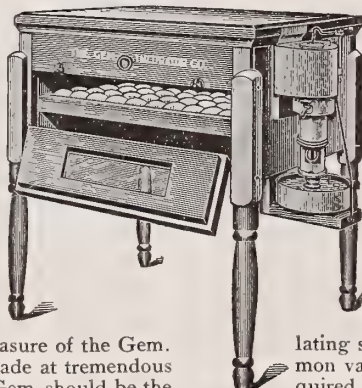

The Indian Games, outside of the

Gem INCUBATORS \$7.00 AND UP!

The Gem is the wonder of the whole incubator industry. How such a splendid machine can be sold at the price is puzzling everyone—other makers and users alike. Here's the secret. Every "Gem" has the "know how" built in. Others experiment; Others hope they're right. The Gem know they're right—that's all. Years of careful painstaking study and observation are the measure of the Gem. Each improvement—each addition has been made at tremendous expense. We made up our minds that the Gem should be the best incubator on earth—not simply good. We've made it the best on earth, and our immense organization makes it possible to sell it to you at a remarkably low price. Each machine carries an unqualified guarantee for five years, and two hatches free. Any reliable dealer will sell you a Gem on our special

Sixty Days' Free Trial

and on our absolutely binding guarantee. If not, we will supply you direct from factory. The Gem is made of high grade material, double walled, heavy metal parts, and substantially built in every detail. It embodies several special and valuable features found in no other incubator—particularly

TWO HATCHES FREE 5-Years' Absolute Guarantee

Removable Chick Tray and Nursery

This feature is one greatly appreciated by incubator users, especially by those who raise chickens on a large scale. The Gem is most easily operated and easiest for either beginner or expert to handle. The ventilating system is perfect and entirely distinct from common varieties of incubators. No artificial moisture required. The regulator is absolutely the most reliable in existence for controlling the temperature. The Gem requires but five to ten minutes attention in every twenty-four hours—a big saving in time and labor.

Read About the Remarkable Success of Gem Users

Gentlemen:—I have made just one hatch with the Peepie Incubator purchased of you in March, and it was a very good one, being about 80 per cent. William Rylands.

Gentlemen:—We have used your incubator one year and brooder two years, and are well pleased with them. Think they cannot be beat. Mrs. A. Jetter.

Gentlemen:—Your incubators are as good as the best. With your No. 1 Special I have hatched out over a hundred good, healthy chicks. Wm. H. Zindel.

Gentlemen:—Bought my Gem Incubator second-handed, and while it was my first experience, have had good luck. Have had three hatches this spring, setting sixty eggs each time, and getting on an average 95 per cent hatches. The Gem is my pick among incubators. John Martin.

Gentlemen:—Received the Peepie Gem Incubator all right some time ago and am well pleased with it. From 47 fertile eggs we got 40 healthy chicks. Lester C. M. Kunej.

Make Money With The Gem

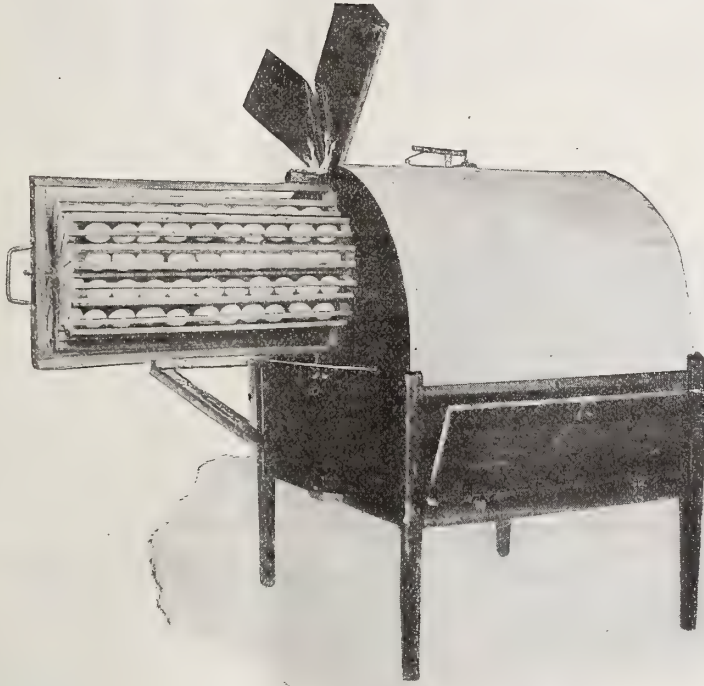

The Gem is a money maker. Any number of our users are cleaning up snug sums of money right along. Every day our mail contains scores of letters expressing satisfaction and telling of unusual success. We quote a few elsewhere. Read them. Now is the time for you to make money.

Don't take chances on un known or experimental makes. Buy the Gem and start getting your share of profits. If your dealer won't or can't sell you a Gem, don't take another. Illustrated catalog free. Write today.

Gem Incubator Company : : Box B, Trotwood, Ohio

World Famous

INCUBATORS, BROODERS AND SELF-TURNING TRAYS

SECOND to none, because the correct method of turning the eggs is used. It is impossible to turn the egg around the embryo. The old method of turning by hand will bring bad results, sometimes the loss of a whole "hatch," and this will happen sometimes with a hen. We move step by step. That we used to wear boots is no reason that we shall wear them now. My machine has awakened the world to realize the fact that it never knew what a **REAL** incubator is. Until my machine was placed before the public they have been groveling in darkness as regards the hatching of chickens.

"World Famous" ranks first, which place it will continue to hold, because: It never turns the egg on end; never turns the egg around the embryo; never breaks the spider in the egg; turns all the eggs as easily as one; it is impossible to overheat it, yet it is the easiest machine on earth to heat. It never cooks the egg, or the chick in the egg.

Remember, I guarantee this machine to hatch every fertile or hatchable egg, and that it will hatch more livable chickens, eggs being equal, (test three hatches) than any other machine.

Now, you want the best machine on earth, don't you? Then send for my catalog. It's free. It gives full information regarding my machine; it gives valuable information on diseases and cures for poultry; **FREE**.

My Brooder is so arranged that there is the least possible danger of its getting too hot and roasting the chicks, and I guarantee it not to do so. This often happens with the common brooder.

Remember, my heating system is superior in that it saves half your fuel, maintaining at all times **EVEN TEMPERATURE**.

"Useless to lock the barn after the horse is stolen" applies in selecting an incubator. Why use the old method which causes half the chickens to die in the egg and the other half to be weaklings that are difficult to raise? "Lock the barn door" in good time! Start right and the end will be satisfactory. Send for my catalog; it's free.

W. M. Lininger, Box 153, Hinton, Okla.

prize winners, were not an exceptional quality lot, but the first prize birds were very easy to pick out. The first cock was a great bird, one of the best types ever seen in the Garden, bullock heart shape, good color, massive bone, without a fault, as wide as a house. Second, nice quality, but smaller. Third, very good type, great bone, poor feet. Fourth, too high on leg, good bodied bird. Fifth, too high on leg altogether. First hen, good shape, hen well laced, but inclined to be single instead of double. Second, a good hen, smaller and lacing not so distinct. Third, a fairly nice laced one with good type. Fourth, we thought the best laced bird in the class. Cockerels, first and second, owned by the same man. First, good shape, heavy bone, good color, standing well. Second, another good one, not quite as large. Third, too stilty. Fourth, a rather small, good quality bird. Fifth, out classed. Pullets, first and second, both to Templeton. First one, beautiful type, but inclined to single lacing. Second one, good type, good shape, good bone and poor lacing. Third, smaller, but very nicely laced. It seemed to be a fault with the female Indian Game, to have a tendency to single lacing, when our standard calls for double lacing. I know it is a hard thing to get the ideal double, but I think that too much lacing is not as bad as too little. The White Indian Games were not very good. The cockerels were very high on leg and the females too long on body, they were also brassy.

In the exhibition yards your reporter had no time to go through the whole list, so simply went through the Black Minorcas and Orpingtons. In Single Comb Buff Orpingtons, a splendid hen, a remarkable good male bird headed the pen, in fact, Mr. Delano said this was his best cock bird and should have been shown in the open class. He was mated up with four splendid females and was worthy of all he got. Second and third pens, Miss Hooker. Second pen headed by William, a bird imported two years ago from England. He is a good breeder and the only fault, a trifle high on leg and little cut away in breast, mated with four splendid type females. Third pen, not quite as good, but still pushing hard for honors. Fourth, Owen Farms, a rather pleasing pen well shown. Five and six, also good pens.

Single Comb Blacks.—First Foxhurst, a rare good quality pen well shown, headed by a remarkable good male with rather a poor comb. The females were A No. 1. Second pen, another good quality pen, very little to choose between them, in fact, in black pens the quality was superb and almost any one of the first four could have won.

Single Comb White Orpingtons was the surprise of the show. Harries, winning the blue on a good quality pen of pullets, headed by a good, large, strong white cockerel shown in the pink of condition. The only fault being one pullet, a little off color with rather poor legs. Second, Kellerstrass, a good pen with four fine females hardly as white as the first pen, with a rather

small boned male at the head, still he was good type, not shown in the best condition. Third, Cook & Sons, a good quality pen, still not shown in the best of condition, having some good quality birds in same. Fourth and fifth, replicas of the second and third, not quite as good in quality. Sixth, a very fair pen shown in good condition.

Black Minorcas.—First pen had a very large male with four good females. Second, a good quality pen well put together. Third, we considered the best pen of the lot, good size, good quality, and shown in good condition. Fourth and fifth, very good.

The class of Single Comb Rhode Island Reds consisted of 138 birds, including pens. The average quality was certainly a credit to the breed. The first single comb cockerel belonging to Mr. Tompkins, who also won both color and shape specials for best male. He was a fine large bird and it is needless to say had fine color and type. The first prize pullet was also awarded both color and shape specials and while she was a very fine specimen all around, it was generally conceded by the majority of Red breeders present, the second prize pullet was the better shaped bird.

Lester Tompkins, Concord, Mass., carried off the cream of the prizes in this class, besides winning first and fifth cock, first, second and fourth hen, first cockerel, third and fourth pullet and first pen; also color and shape specials on males. This is indeed quite a record to be won at the Garden and this one with Mr. Tompkins' late Chi-

ORPINGTONS

Buff, Black and White

If stock ordered is not satisfactory, advise me promptly and tell me why, and I will replace it or refund your money. I am not in the business for pecuniary gain only.

Your order is solicited in view of these liberal assurances. Bear this in mind for your present or future requirements. To avoid inconvenience and delay, be sure and specify the quality desired. My catalog and Fall sale list is free. *I won more prizes on Orpingtons at 1908 Chicago shows than any other exhibitor. There's a reason. Start right and you'll succeed.

C. S. Byers : Orpington Specialist 11 Years : Hazelrigg, Ind.

WHITE ROCK WINNERS

Madison Square, Jamestown, Indianapolis, Chicago, Toledo and Detroit

My birds have won and won well at these and many other shows for many years. All the stock I offer you are the progeny of winners, so were their grandparents and great-grandparents. I have an unusually good bunch of old and young birds fit to show anywhere. I am quoting special prices for this month on a few yearling hens and a large lot of good breeding cockerels and pullets in order to make room for my breeding pens. Remember, everything sold guaranteed to please customers or may be returned at my expense. Write today for special prices, show birds or breeding stock. Send for my fine 32-page illustrated catalogue, free for two two-cent stamps for postage.

OF QUALITY. Still the leading winners in some of the largest shows in America. Record for 1909: 51 ribbons out of a possible 55. Also \$100 special prize for best and largest display, competition open to the world. Send for my free catalogue of matings and winnings. Absolute satisfaction guaranteed in

Morgantown, W. Va., Jan. 4, 1910.

Dear Sir:—Last spring I got some eggs of you and am very proud of the results, as I have one cockerel that is a true Edward B. Jr. At our recent show this cockerel won 1st, also specials for best Plymouth Rock male, best bird on exhibition, best cockerel of any variety, best specimen of any class, best bird in American class, best male bird in the show, making six specials in a class of 500 birds. Blood lines will tell. Yours respectfully,
S. B. Allen.

Reynolds, Ill., Dec. 27, 1909.

Dear Sir:—I have just learned that at the — show I won silver cup for the 10 highest scoring birds in the show, and I am pleased to say there were 78 White Rocks in the show, of which nearly all the good ones were Fishel Strain. I am more than pleased with results obtained from the eggs. I beg to remain
Yours very respectfully, P. N. Crabs.

Barnesville, Ga., Dec. 19, 1909.
Dear Sir:—The \$15 pen of White Plymouth Rocks bought of you have given the finest re-

sults and have paid for themselves in eggs alone, besides I have a nice flock of 40 young birds reared from them. Yours truly,
C. H. Humphrey.

Philadelphia, Pa., Sept. 27, 1909.

Dear Sir:—Birds arrived safely. Accept my warmest thanks for the selection. They are the most beautiful I have ever had. After being inspected by one who knows he remarked that "no where could they be duplicated at the price." Again thanking you, I beg to remain
Yours truly, C. G. Mueller.

What Others Say

about the treatment they have received at my hands will surely interest you and convince you that

U. R. Fishel's White Ply. Rocks

are all and more than we have ever claimed for them. Remember, our whole life has been devoted to the production of the very best possible in poultry. No wonder then our White Plymouth Rocks stand so far ahead of every other strain and are conceded everywhere to be

"The Best in the World"

Send two dimes for 56-page catalog, and remember we have several thousand birds yet to sell and are in position to give you better value and better blood lines than any other breeder of this variety. We have about fifteen hundred cockerels, the new Standard type, that we are selling at \$3, \$5, \$8 and \$10 each. Strong, farm-raised vigorous fellows—just the kind to give you results.

U. R. Fishel, Box A, Hope, Ind.

Eggs For Hatching: \$8 per 15; \$15 per 30; \$25 per 60

cago victory is certainly a credit to him. We understand the second prize cockerel should not have been placed, as the under color of his hackle had considerable white and the owner sold him for the insignificant sum of \$18.

The Rose Comb Rhode Island Red class consisted of 108 entries. The Ellenwood Farms, Hattboro, Pa., who had a big entry in this class, were not able to get their birds there on time, owing to the heavy snow storm, or there is no doubt but what the ribbons would have been placed differently. The class, however, attained exceptionally good quality and the first prize cockerel was indeed a wonder in color as well as a very fine shaped bird, winning the color special. The shape special, however, fell to the second prize cockerel, which was a very fine shaped specimen and deserved what he got. The first Rose Comb hen won both color and shape special and was a very fine specimen and the prizes were rightly placed. The first rose comb pullet was a very fine bird in both color and shape and there were many other good birds in this class who had to be left out of the money.

Barred Rocks

WE CANNOT tell you in this space all that we want to say about the merits of our Barred Plymouth Rock winners at Toledo, Detroit and other large shows, and also our high-class utility stock. We have, however, published a new handsome catalogue telling about our stock and containing many fine illustrations of our yards and buildings, and also individual pictures of our birds. These pictures are untouched and show the birds true to life. If you are intending to purchase either stock or eggs, send us one dime today for this elegant catalogue. We guarantee that it will interest and please you.

Automatic Feeder

Also send at once for free circular telling all about the Poultry Feeder and Exerciser shown in this picture. It is the greatest feed and labor-saving device ever placed in a poultry yard. We have fifty of these Feeders and Exercisers in constant use in our yards. The price of the Feeder and Exerciser is 8-qt., \$2.50; 14-qt., \$3.25; 20-qt., \$4.10; 32-qt., \$5. Send us the price of the size you want and we will ship it to you on 30 days' trial. If you do not want to keep it, return to us and we will refund your money and pay express charges both ways. We refer to the editor of this paper and to the Citizens' Banking Company, Perrysburg, Ohio, as to our financial standing. Write today. Remember, the Barred Plymouth Rock catalogue is only 10c in silver or stamps and the circular telling about the Poultry Feeder and Exerciser is free.

River Home Poultry Yards : Box B : Perrysburg, Ohio

LAKEWOOD FARMS

EGGS for HATCHING and BABY CHICKS

Ready for Delivery

“Order now” is the keynote of this announcement. To be thoroughly successful as a poultry raiser, it is absolutely necessary that you have profit payers—hens that will produce in large numbers, **healthy, nutritious eggs**—hens that will lay enough to be **REAL** profit payers—hens that will work for you and make more than their mere board and lodging.

This is the sort of fowl that the LAKEWOOD FARMS DUAL PURPOSE LEGHORN eggs for hatching produce.

LAKEWOOD FARMS BABY CHICKS, given ordinary care and attention, grow into the healthiest, heartiest, most profitable egg producers and market birds there are.

300,000 baby chicks each season are hatched out at our mammoth poultry farms at Lakewood and Eatontown, 70 per cent. of these we sell to other poultry farms for profit making

purposes—the balance we raise for the good of our own farms or sell through our retail stores for table use. In spite of this large production, we find it hard to supply the demand of our regular customers, but we are very anxious that the Lakewood Farms Dual Purpose Leghorns be widely distributed throughout America and we therefore urge you, who have not yet purchased Lakewood Farms Baby Chicks or Eggs for Hatching, to order, and order NOW—at once if you desire delivery this season.

Prices on request. Orders are filled in order of receipt.

If you have not yet received the Lakewood Farms Products Co. Prospectus—write for it **NOW**. It offers the biggest profit making, co-operative proposition that has ever been organized in the history of poultry raising. It gives you the opportunity of participating in the big-sure profits of this mammoth enterprise—it affords you selling channels for your products—it is a plan by which you, who raise chickens for profit, and not merely for the pleasure there is in them, can increase your present income not alone from the profits that will accrue

from sharing in our investment but also in raising the standard of egg and chick production on your own farm.

We have also issued several very interesting books which we will be glad to send you free, on request—“The Hen of Destiny” Book, which tells all about the Lakewood Farms Dual Purpose Leghorns, and second, “Chicken Remedies,” our book on the care and treatment of poultry.

Write to-day for the Lakewood Farms Prospectus, it tells of the best 7 per cent. stock and most substantial bonus ever offered to industrial investors.

—And most important of all for you to have is the Lakewood Farms Catalogue of Poultry Supplies—a big book in which is listed all the supplies necessary to successful poultry raising—incubators—feeds—medicines, etc.

You should know the Lakewood Farms Incubator—the one *we use* so successfully.

Every article listed in this catalogue is prepared or manufactured in our own laboratories and factories or under the supervision of Lakewood Farms own experts and specialists—men who have enabled us to become the biggest, most successful and most profitable poultry industry in the world.

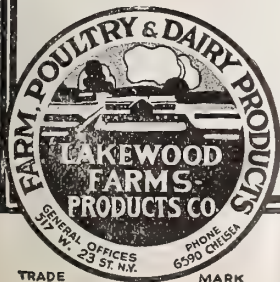

This catalogue is **FREE**—write for it before the first edition is exhausted.

THE HALL MAMMOTH

Incubator, Brooder System, and Colony Brooder.

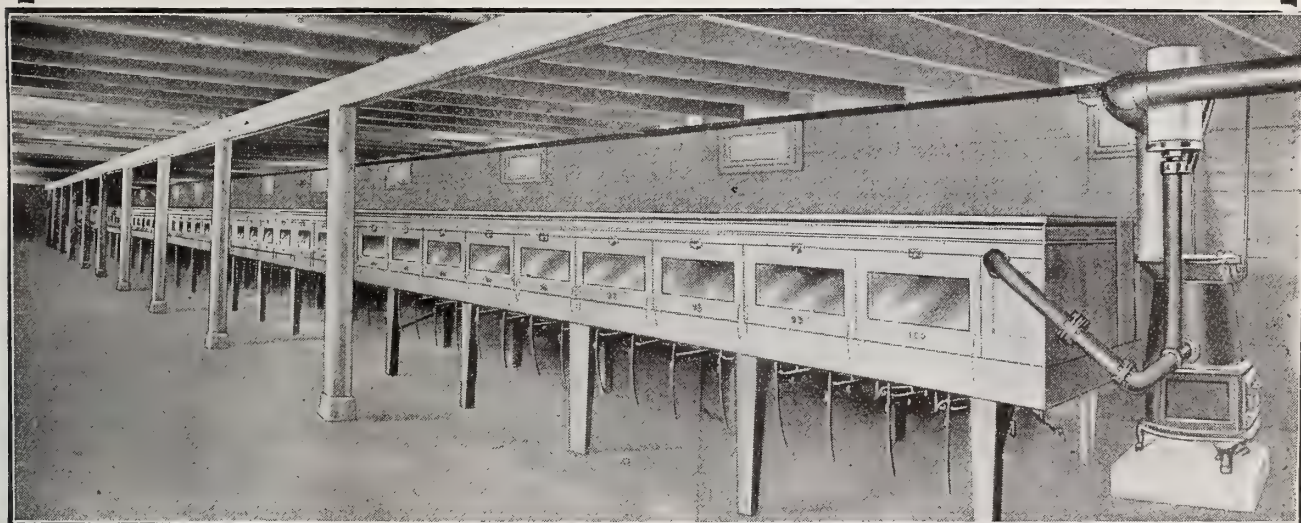

We seek Poultrymen who want an Incubator or a Brooder System that is **MORE** than a **LITTLE BETTER**.

We seek Poultrymen who want bigger hatches of chicks that live, and who want to shorten the growing period by getting the fastest growth possible.

We seek those who want greater certainty of results, at a lessened cost of production, and with less labor—those who contemplate the poultry business on a profit earning basis.

To these—to you, reader—the **HALL CATALOG** is **FREE**. It describes the Hall Mammoth Incubator and Brooder System, and illustrates some of the farms on which Hall equipments are proving satisfactory beyond competitive comparison.

The Hall Mammoth Incubator and Brooder system are a base of unquestionable solidity on which poultry operations can be performed with CERTAINTY.

A Hall Mammoth Incubator on the Poultry Plant of C. M. Woolver, Richfield Springs, N. Y.

At Pittsfield Poultry Farm, Pittsfield, Me., there are two Hall Mammoth Incubators and four Hall Brooder Systems. In response to a letter addressed to "Pittsfield" making inquiry regarding the Hall Incubators, the following reply was made:

Mr. C. W. Dorvall,
Lambton Quay, N. Z.

Pittsfield, Me., December 28, 1909.

Dear Sir:—Replying to your valued favor of the 24th, will say that we can recommend the Hall Mammoth Incubators very heartily. To our minds there is no incubator that can approach it. One thing that is particularly noticeable about it from our experience is that it hatches practically every fertile egg, there being no chicks dead in the shell. You will in no way make any mistake in buying one of them, as it is a great labor saver and fuel saver. Last season we incubated 55,000 chicks at an expense of \$14.00, coal costing here \$7.50 per ton. We are very glad to have an opportunity to recommend this equipment to you and trust we may hear of your buying one.

Yours very truly,
Pittsfield Poultry Farm Co. (F. W. Briggs, Mgr.).

We offer the Hall Mammoth Incubator under a positive guarantee. Test it in your cellar, on your own farm. The equipment is all we claim, and we stand back of it with a valid, binding guarantee.

We have issued a new Brooder Book. It describes the Hall Brooder System, also the Hall Colony House Brooder. It tells how cheap and successfully the chicks can be grown. The Book and the Hall Catalog are Free.

POULTRY THRIVES IN SOUTH JERSEY

Soil and climate have a great deal to do with the successful raising of chickens and squabs for commercial purposes.

This land in Southern New Jersey has natural advantages not excelled anywhere. The soil is clean and porous, insuring dryness and cleanliness, two great essentials.

The climate is mild even during the winter, and the early spring forces broilers and eggs into the markets at good prices.

Only 19 Miles From Atlantic City

within easy shipping distance of the best markets in the country—New York, Philadelphia, Baltimore, Washington and the Jersey coast resorts. Twelve million people, about one-seventh of the population of the U. S., are within 150 miles of this land.

Two main line railroads and state boulevard run through property, insuring quick transportation of produce to the markets within a few hours of leaving the farm.

Plowing was done in this locality during every month last winter. Berries, fruits and vegetables can be grown with good success, thus yielding an income from the land during practically the entire year. Large manufacturing town and navigable river nearby. Title insured. White people only. Booklet free. Write today.

FRAZIER COMPANY

691 Bailey Bldg.

Philadelphia, Pa.

5 ACRES \$125

PARADISE BROODER

THE name of this brooder describes the kind of a home it furnishes for little chicks. On the basis of our many years experience in the manufacture and sale of brooding devices we believe this to be the best indoor brooder invented thus far as a nursery for chickens. The Paradise Sectional Brooder embodies the correct principles of brooding chicks and ducklings by artificial means—heat, light, ventilation, room for exercise, fresh water, etc., combined with economy of fuel, labor, feed, money, space and time.

HEAT—You can successfully brood eight hundred chickens at one time, fifty chicks in each lot in a Four-section, Upright, Indoor Paradise Brooder (each lot having a space 3 x 3½ ft.) with the use of one lamp, a blue-flame standard burner, with automatic oil feed. *The ages of the chicks may vary from one day to eight weeks old* and the chicks can be separated as to sizes, yet all will have just such conditions as are essential for their rapid development.

VENTILATION—Each section has two individual hovers, with separate runways, each hover having a fresh-air inlet directly connected with the outside of building, this air being moderately warmed before it enters hovers.

LIGHT—There are no felt curtains, no places to harbor lice, mites, etc., *but there is plenty of light.* The entire eight hundred chicks of all ages can be seen at one time almost at a glance.

WATER—Each section, each runway, has a constant supply of fresh, cool running water which feeds automatically from a drip tank located on the top section.

PLACES TO USE—Should be operated in a dwelling house, store room, stable, poultry building or other structure where the temperature does not go much below freezing. Will give excellent satisfaction in any of these locations. *No better or more convenient place can be found than a room in an ordinary dwelling.* Two brooders complete, four sections each, having a combined capacity of sixteen hundred (1,600) chicks, can be operated in a room 12x12 ft. with every convenience. Size of each brooder (floor space) is 3x7 ft., and an eighteen or twenty-four inch aisle is needed at ends and sides for operator.

IDEAL NURSERY—One of these brooders complete can be located to advantage in each runway of an ordinary brooding house that is heated by hot-water pipes or equipped with individual floor brooders and will serve as a first-class nursery for newly hatched chicks, thus greatly increasing the capacity of the house and giving the owner a place in which to brood his youngest chicks where they will be under perfect control every hour of the day or night.

DAY-OLD CHICKS—The Paradise Brooder is just the thing for poultrymen dealing in day-old chicks who need comfortable and safe quarters in which to keep newly hatched chicks a few hours or a few days until they are shipped away on orders. *It is equally valuable for all persons who buy day-old chicks.*

SAMPLE TESTIMONIALS

Cyphers Incubator Co.—

Angola, N. Y., April 8, 1908

We are using the Paradise Brooders in connection with our 170-foot brooding house. By doing so we have a capacity of 5,000 chicks at one time. Our chicks are taken from the incubators to the Paradise Brooders and kept there for three weeks, then transferred to the hot-water pipe system. This plan is giving perfect satisfaction. One thing we especially like about the Paradise Brooder, you can see nearly all the chicks any time at a glance. The glass and wire keep every chick in sight—different from the old-style dark hovers. Very truly yours,
WM. J. CONNORS POULTRY FARM,
Robt. Herman, Superintendent.

Cyphers Incubator Co.—

San Antonio, Texas, August 11, 1908

The fifteen sections have been in continuous use since I installed them, with fifty chicks to the hover, and even with the intense heat of a Texas summer we have averaged less than one-half of one per cent. death loss, and saved at least three-quarters the labor, while the growth of the chicks has been astonishing—my comparison of results is by the practical test of brooding as the outdoor brooder loss was seven to ten per cent. with same feed, care and attention, so hereafter the Paradise Sectional Brooder for me as the nursery home until the danger period is past. With best wishes I am, Yours very truly,
WALTER B. FRANKLIN, Manager.

Cyphers Incubator Co.—

Pine Ridge, Buffalo, N. Y., December 20, 1909

My poultryman has used one of the Paradise, Four-section Upright, Indoor Brooders since last February and has raised in it eight different lots of chicks with practically no loss. Yesterday we took 114 chickens out of this brooder that were raised in it until nine weeks old, Leghorns, Houdans, etc., and they weighed a pound to a pound and a quarter each, just right for squab broilers. The fore part of October, 116 chicks—all we hatched at that time—were put in this brooder and we lost only two, both by accident. I believe the Paradise Brooder is the best indoor brooding device ever invented for raising chicks to broiler size. It is cheaper to buy, easier to use and far more economical than the ordinary floor brooders. Yours truly,
GEO. URBAN, Jr.

Cyphers Incubator Co.—

Athol Springs, N. Y., January 15, 1910

I installed a four-section Paradise Brooder in my stable last March on the Lake Shore and raised chickens in it all spring and summer with fine success. There was no auxiliary heat in the stable and the double doors were opened a number of times each day. I now have it in operation in an unheated room of my new poultry house. At first my men—gardeners by trade—looked askance at this type of brooder, but it was not long before they discarded the floor brooders for this one and now they are not willing to use anything else. I shall order more of them this season. Very truly yours,
H. A. FORMAN.

PARADISE SECTIONAL BROODER
(Showing Four Sections)

The operator can use one or several sections at a time—one lamp and water tank does for all. This brooder is the result of years of study and test by practical poultrymen. It has been in general public use three years. Sold in one, two, three or four sections.

\$750 For This 120-Egg Ideal

FREIGHT PREPAID

Write for Low Prices On Larger Sizes, DELIVERED

I am quoting the only real cut prices of the year. Let me prove it. I am quoting on quality machines and I am paying the freight.

Don't buy a "cheap" machine when you can get this big Ideal for \$7.50, freight paid. And don't pay more, because you can't get better value at any price. Ideals are better than ever this year, and this is why:—They are covered all around—front, back, sides, top and bottom, with 28-gauge galvanized iron. They are safe hatches, and the metal cover holds the heat better—saves oil. The Ideal regulator is a marvel of accuracy; ventilation automatic; walls of triple thickness and dead air space; double door; most improved copper heating system; large, safe, smokeless lamp. Write today, for low, freight-paid prices on incubators and brooders of all sizes, and a free copy of my big poultry book. Everybody says—

Miller's Book Beats Them All

Anyhow, I've put my 30 years of "know how" into it, and that ought to help any poultry-raiser to larger profits. It contains full-page cuts of Standard-bred poultry—finest you ever saw; also my guarantee and prices that will save you big money. \$7.50 for 120-egg is a hint of other things. This is my delivered price to all points east of Missouri River and north of Northern boundary of Tennessee. If you live beyond, write for price delivered to your R. R. Station. Send name and address for books and get all the facts. Address, J. W. Miller,

J. W. Miller Company, Box 56, Freeport, Illinois

J. F. SIEMS, Patentee

We're Still At It. 100,000 More People Will Use the NATURAL HEN WAY of Hatching This Year

OVER half a million Natural Hen Incubators were in use last year. Many are pushing the old-style hot boxes aside (with their lamps and fumes and dangers and unsatisfactory hatches). People are learning to know that the Natural Hen way is the only way. Our great hatching plan, which so many thousand chicken-raisers are turning to, uses the actual, living hen. She does not go wrong. She furnishes the heat, turns and airs the eggs and regulates the entire hatching process. The Government is behind it. It's fully protected by patents in the U. S. and in foreign countries. The only patented incubator in the world which uses the living hen from the beginning to the end of the hatching process is the Natural Hen Incubator. There can be no variation from nature's requirements. No overheating; no sudden cooling; no expense for oil; no attention; no freight to pay; no danger with the

Natural Hen Incubator

Read What These Users Say:

Walter Brown, Cadle, Ill., writes: "We hatched 550 chicks with our N. H. Incubator this season. Out of 156 eggs we got 140 chicks." . . . A. D. Haley, Cottonwood, Texas: "The Natural Hen Incubator is simply itself and the greatest help to nature ever conceived by man." . . . S. Hildebrandt, Moorestown, Pa.: "It gave me unexpected results. Out of 60 eggs I got 59 healthy chicks. It's a labor-saving invention." . . . T. F. Mitchell, San Francisco: "I had fine luck—51 chicks out of 62 eggs."

Get Our Free Book and know all about our great hatching plan. You can't afford not to know the Siem's way. Agents Wanted. Write now to **NATURAL HEN INCUBATOR CO., 1349 Constance Street, Dept. 4, Los Angeles, Cal.** (Formerly located at Columbus, Nebraska)

200-Egg Size, \$3.00

Don't Throw Your Money Away: Other Incubators Sell at 4 Times This Price

SILVER-LACED WYANDOTTES

Buff Wyandottes

We entered but one cock at the Chicago show. He won first. We also won third cockerel and fourth pullet. Exhibition cockerels and pullets, good ones, \$3.00 to \$15.00. A few excellent breeding pullets and cockerels at \$2.00 and \$3.00.

Clare E. Hoffman

Allegan, Michigan

AT THE GREAT WEST MICHIGAN STATE FAIR—Won in the hottest competition first and third cock, third hen, first and third pullet and second and third cockerel. Silver cup three years in succession for best pen at Grand Rapids. 200 head grand youngsters, 50 yearling hens and 5 cock birds for sale. If you want the soft mellow Buff kind (buff to the skin) get my rock bottom prices.

E. A. Knapp, 451 Grandville Avenue, Grand Rapids, Mich.

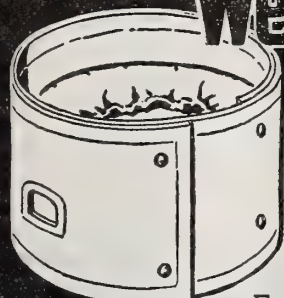

Buff Orpingtons

Chicago and Indianapolis Winners

Blue comes easy to Martz's line-bred, trap-nested layers. Chicago—1st pen, 1st cockerel, 2nd cock, 3rd cock, four best pullets, four Club Specials. Indianapolis—1st and 2nd pens, 1st cock, 1st pullet, 2nd and 3rd cockerel, five Club Specials, and other minor prizes at both shows. A few cockerels for sale. The largest Egg Catalogue and Mating List ever issued will be ready for mailing about January 10, 1910. Twenty-five illustrations and other valuable information. Free. Send for one.

A. E. Martz - Buff Orp. Specialist - Box C, Arcadia, Ind.

We Challenge the World

IN
OPERATION
FIRST
DAY

to produce a brooder for ten times the price that will take care of the chicks from shell to colony house as well as the LULLABY does.

It broods like a hen—

Grows with the chicks—

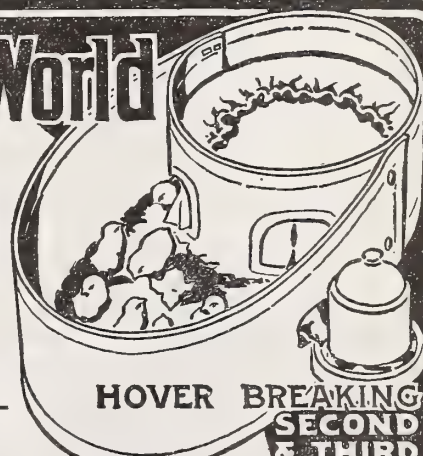

Hover-breaks without attention—

Furnishes fresh air in natural way—

Provides watering method without wetting chicks—

Chicks cannot crowd and smother—

Prevents chance of white diarrhoea.

HOVER BREAKING
SECOND
& THIRD
DAYS

\$1.50 Delivered

The Lullaby Brooder

PAT. APPLD FOR

was pronounced by rival manufacturers and experienced poultry men at the recent Madison Square and Boston Shows to be the most practical brooder ever invented. It solves all the problems of artificial brooding and will take care of the chicks with less trouble and in a more perfect way than the old mother hen can. It costs only one-tenth as much, is more sanitary, more economical, and is better in every way than others. It has no rival.

Send your order for a LULLABY BROODER on trial. If you are not entirely satisfied with it, we will promptly return your \$1.50

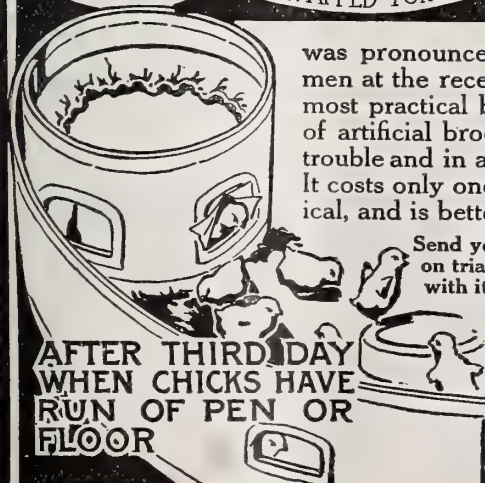

We will send you free our "Poultry Almanac for 1910" if you mention this paper. It fully describes this wonderful brooder and gives expert advice on every detail of poultry keeping.

Sold by dealers everywhere, or direct of

The Price of Eggs

Last Year Was Too High

for anyone to ignore that may be at all inclined to raise poultry. The price of poultry itself is an added stimulant to become a producer of that which assures a positive profit on a small investment. There is good money being made in the poultry business. Are you making your share of it?

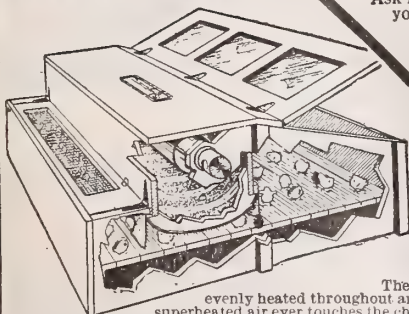

Poultry raisers of the United States during 1909 received an average of more than 20 cents a dozen for eggs and an average of about 11 cents a pound for chickens.

These figures are not estimates. They are shown by reliably compiled Government statistics. The national government's activity in accumulating figures covering eggs and poultry is absolute proof of the recognized importance of the industry—classified right along with corn, wheat, oats, etc.

Lee's "Chicken Talk" is a booklet written by Geo. H. Lee, himself. Mr. Lee's actual poultry knowledge covers a period of 25 years, and it is this ripe experience of his that is to be found in this booklet. It is free. Write for a copy of it—sent postpaid.

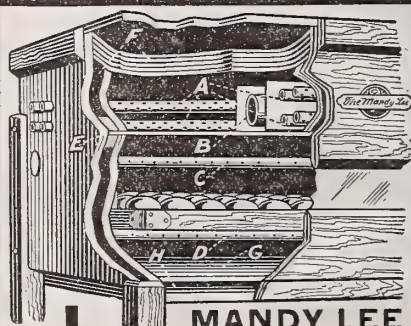

Ask him for any information you want to know about poultry. He knows—and will tell you in such a way that you can know it is a real pleasure for him to answer questions about how to raise egg-producing poultry.

**MANDY
LEE
BROODER**

**DIRECT
CONTACT
HEAT**

The Mandy Lee Brooder is evenly heated throughout and neither lamp fumes nor superheated air ever touches the chicks. The heat reaches the blanket in such a manner as to make over-heating impossible. A poultryman can afford to discard an impractical brooder and install a Mandy Lee. The extra chicks you raise will pay for it. No smoke, no gas, even heat everywhere, well-built, economical in every respect. Compare it with any make, anywhere. You want results. The Mandy Lee Brooder produces nothing else. It does what it is sold to do.

**MANDY LEE
INCUBATOR**

A—Perforated tubes, heating chamber. B—Inlet Pipe from heater. C—Upper Ventilation, egg-chamber. D—Lower Ventilation, egg chamber. E—Air-tight diaphragm. F—Packing in walls and top. G—Chick-nursery bottom. H—Duck-nursery bottom.

**MANDY LEE INCUBATORS
and BROODERS**

Mandy Lee Incubators and Brooders have been leaders from the time they were first offered to the poultry-raising public, but this year they are better than ever, with new improvements and advantages you want. This is the equipment you must buy eventually if you remain permanently in the poultry business. Why not save the expense of experimenting? Buy the best—the line of certainty—the Mandy Lee. Our catalog is complete with everything that has to do with the really good things that promote the very best interests of the poultry-raiser whether the flock consists of a half-dozen or a thousand hens. Write us to-day—while you have the matter in mind. Your share of poultry profit is just what you make it.

FARM AND HOME

Poultry Annual for 1910.

Judge Shute's Humorous Serial, "Farming It."

tells in this issue the funniest story about the hen business.

FARM AND HOME is just what its name indicates—a spicy, practical, up-to-date, twice-a-month magazine. It covers everything that pertains to the farm, home or garden, big or little, in country or village, and interests and meets the requirements of the entire family. The regular POULTRY DEPARTMENT in every number is invaluable to all interested. No better proof of its popularity can be offered than its immense circulation, reaching upward of three million readers.

An Exceptional Chance to Get Farm and Home's Great Poultry Annual for 1910

The great annual authority, this issue is bigger and better even than its predecessors. Yet Higher Prices for Eggs and Poultry this year than last—Demand greater than supply. Your profits with hens, few or many, will be greater than ever if you follow the methods, advice and secrets set forth in the FARM AND HOME POULTRY ANNUAL for 1910.

All about breeding, feeding, raising poultry, where to buy the different breeds, eggs, incubators, brooders, bone mills, feeds, roofing and all other supplies. It is invaluable

For the Little or Big Poultry Keeper

Merits of the various breeds; most approved methods of feeding to secure winter eggs and of raising young chicks; handling of breeding fowls, ducks, geese and turkeys; managing incubators and brooders; the whole art and science of poultry-keeping by scientists and practical poultrymen and women. Practice, not theory.

SOME SPECIAL FEATURES

THE MODERN IDEA OF POULTRY HOUSE CONSTRUCTION. By Dr. E. M. Santee of New York.

BREEDING 200-EGG HENS; HOW CAN WE DO IT? By Prof. Raymond Pearl of Main Experiment Station.

WHAT EGG-LAYING CONTESTS HAVE DONE FOR AUSTRALIAN POULTRYMEN. By D. S. Thompson, Government Poultry Expert of New South Wales, Australia.

THIRTY YEARS' PROGRESS IN POULTRY KEEPING. By H. S. Babcock, of Rhode Island.

A PROFITABLE HOBBY FOR PROFESSIONAL MEN. By Rev. W. H. Davenport, of Mass.

HANDLING FOWLS FOR EXHIBITION. By U. R. Fishel, of Indiana.

A COMBINATION OF SMALL FRUIT AND POULTRY. By M. S. Gardner, of N. Y.

THE OPPORTUNITIES FOR WOMEN IN THE POULTRY BUSINESS. By Miss Clara Nixon, Assistant in Poultry Culture, Cornell University, New York.

HOW TO JUDGE A FOWL. By Judge H. P. Rankin, of Nebraska.

SCIENCE OF POULTRY BREEDING. By Prof. Cossar Ewart, of the University of Edinburgh, Scotland.

WHEN EGGS ARE FERTILIZED. By Edwin C. Powell, Agricultural and Poultry Editor of Farm and Home.

FIVE MINUTES A DAY WITH HENS. By Thomas F. Maher of New York.

THE HEN'S PLACE ON THE FARM. By Prof. Oscar Erf, of the Ohio College of Agriculture.

For Only 10 Cents

We will send our farm and family journal, FARM AND HOME three months on trial, including a copy of the POULTRY ANNUAL for 1910, as described above, without extra charge. You may thus obtain almost as a gift this most valuable work, covering every phase of the poultry industry, which exceeds in quality and quantity any 300 page book that would ordinarily sell for \$1.00. Cut out the coupon attached and send to-day with a dime or its equivalent in stamps.

Farm and Home 30-C Broadway, Springfield, Mass.

First prize pullet, Chicago, 1909.

N. P. EASLING'S BLUE RIBBON WINNERS AT CHICAGO, DECEMBER, 1909.

Few fanciers have gone to greater expense and time in perfecting a breed than has Mr. Easling, of Pekin, Ill. His record winnings of 1908 and again repeating this year is proof that his claim of having the "Best in the West" is well founded. His birds are of large size, white as snow and approach the Standard about as closely as this variety has been bred to date.—L. Stahmer.

SHANN'S S. C. BLACK MINORCAS

Won at the Youngstown show, January 10-15, 1910, in strong competition, 1st cock, 1st and 2d hen, 1st and 2d cockerel, 2d and 3d pullet and 1st pen and two cups for best display. Bred for beauty, size and egg production. Prize winners for 1910-11. Eggs, \$3 and \$5 per 13. Satisfaction guaranteed.

H. J. SHANN : : : PAINESVILLE, OHIO

White Plymouth Rocks and White Wyandottes

Have selected fifty breeders from a flock of 500 that for color and type can hardly be equaled in the West. Have sold birds this Winter that are winning all over the country. At Akron show a noted judge said my first cockerel was the best White Rock he had seen in any of the large Western shows. Cockerels for sale. Write for prices on eggs.

J. M. MOORE JR. : : : EAST AKRON, OHIO

CREGAR'S GOLDEN ROD STRAIN S. C. Buff Leghorns

Our yards contain winners at Boston, Chicago, Missouri State and Indianapolis Shows. Our birds are a rich medium buff with soft buff under color and bred for Standard requirements. We have a few choice S. C. White Leghorns for sale.

H. CREGAR & SONS : 447 HANNAH AVE. : FOREST PARK, ILL.

You Owe It to Yourself

To investigate carefully before you place your order for those baby chicks or eggs. Exhibition and utility Barred Plymouth Rocks White Wyandottes, S. C. Rhode Island Reds and Pekin Ducks that win, lay, weigh and pay. Choice cockerels for sale. Eggs, \$1.50 per 15; chicks, \$10.00 per 100. Philo System raised and housed in open front houses. In price and quality we can give you unequalled value. Shall we hear from you, please? You won't regret it. Send for our catalog, mentioning your wants and this paper and make the acquaintance of

PULLETS THAT LAY STEADILY AT FIVE MONTHS OLD.

These pullets were hatched, raised and fed by the famous Grundy Method. They are part of a flock of fifty-five. Forty-six of them began laying at five months old. The Grundy Method is making more successful, money-making poultry raisers than all the systems known. It is the work of an expert poultryman of twenty-seven years' experience, and every person who wants to get the best results from his poultry should have a copy. See Mr. Grundy's advertisement on another page.

Victor Incubators and Brooders

ERTEL'S POULTRY DIARY

for use of poultry raisers in keeping account of expenses, eggs, chicks and profits, proved so popular that we have made it a separate book. To pay part of cost and postage we charge 10c a copy.

Victor quality tells in the hatches. Right principles, right materials, right building, right ventilation, right regulation, mean more chicks and greater profit. Victor quality costs but little more and the difference on one or two hatches more than pays it. Write us first. Our book "About Incubators" will be sent free. It has important information for incubator buyers. ¶ We can save you money. The lumber, copper and fittings we are putting into our machines this season we bought one year, two years or three years ago, before the present high prices. ¶ We do by machinery what others do by hand labor. ¶ The result is a lower price to you for the same quality of machine. ¶ We use seasoned lumber, we put heavy copper into our tanks and boilers. We build

GEO. ERTEL CO., 102 Kentucky St., Quincy, Ill.

S. C. Buff Leghorns and R. I. Reds. To make room for Spring matings, I will sell about 50 trios of S. C. Buff and Reds at \$6.00 per trio, which are actually worth \$10.00. Cockerels, \$2.00 to \$3.00 each. Show birds a matter of correspondence. Eggs, \$1.50 per 15; \$2.50 per 30, from eight select pens. 328 ribbons and specials in five years.

Woodlawn Poultry Farm : Kirkwood, Missouri

R. C. Rhode Island Reds

We won under Lester Tompkins in every class in the fiercest class ever shown in Ohio, 4th cock, 2d hen, 4th cockerel, 4th pullet and 3d pen. All birds we bred and raised ourselves. A few choice breeding cockerels at \$5 and \$10, also females \$2 to \$5 each. Write for circular telling about the father, mother, son and daughter that won at Youngstown.

Simmons & Crittenden - - - Geneva, Ohio

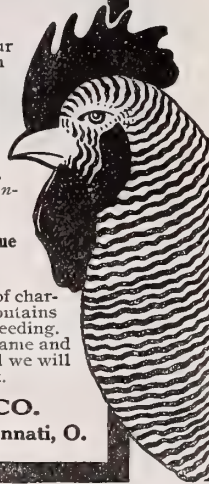

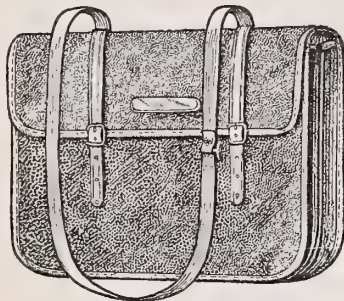

**ESSO RE-CARBONIZED CHICKEN CHARCOAL****Healthy Chickens mean Healthy Profits**

There is no profit in a sick chicken. Your chickens need charcoal to keep them in good condition. But do you know there are *two kinds* of chicken charcoal? One is *once-burnt*; the other is *re-carbonized*—twice-burnt. Esso Chicken Charcoal is the best and purest you can buy—because it is the only chicken charcoal that is *re-carbonized*—twice-burnt. The only charcoal in which *no gritty un-charred pieces* are to be found.

Write for our Free Booklet "The Value of Charcoal in Poultry Raising."

This book tells the facts about both kinds of charcoal. It is well worth your reading and contains some excellent suggestions for proper feeding. Send us your name and address with the name and address of your poultry supply dealer and we will mail you a copy of this booklet free of cost.

The S. OBERMAYER CO.

**BOYS AND GIRLS**

YOU'LL want a nice waterproof storm bag to carry your books back and forth to school this winter.—Besides, there is the scholar's companion in this outfit—a beautiful box filled with all the school supplies. You'll need every article in this outfit every day of the school year—and you can get it free!

The Bag—a heavy, plain black oilcloth; all edges neatly sewed; rounded corner flap over top, securely held in place by

two straps riveted to bag; 1½-inch extension all around; complete with long, heavy leather shoulder straps.

The Box—a substantial, divided box highly varnished and finished with lock and key device; contains every requisite for the schoolroom—namely, 6-inch wooden ruler, penholder and pen, lead pencil, white crayon, pencil sharpener, combination ink and pencil eraser and nine crayons (assorted colors)—a very neat and compact box.

**You Can Get This Outfit Free**

I want you to sell for me **TWO BEAUTIFUL COLORED PICTURES** to your friends. It will take only a few minutes of your time, as my offer is so liberal everybody will want one. After you have tried it you'll be enthusiastic and want to earn some of the other fine rewards I am giving away.

Just Write Me—A postal card will do—say you want **TWO** pictures to sell. I'll send them by return mail—and I trust you until you sell them—then send me the money collected and I'll send you this fine School Outfit as a reward for your trouble, and a complete list of the other valuable articles of merchandise you may earn in the same way. Don't wait—send me a postal to-day. Address

ORDER ONE TO-DAY

Use it
15
Days
FREE

Do you want to have lots of eggs to sell? Then you will have to provide your hens with the kind of food eggs are made of. Feed cut green bone and the increase in your egg yield will more than pay for a "Dandy" Green Bone Cutter. We'll sell you any size cutter you want on 15 days free trial backed by a broad guarantee. This will give you an opportunity to see how the machine is made and how it works before you buy it. The "Dandy" has distinctive features found in no other bone cutter—is easily operated and being automatic in its feed, it never clogs the cutter, nor gets out of order. Write today for Free catalog—it's full of poultry feeding facts that will save you money. **STRATTON MFG. CO., Box 17 Erie, Pa.**

YOU OUGHT TO HEAR A WING PIANO

**FOUR WEEKS'
FREE TRIAL**
We Pay Freight Both Ways

**A Beautiful Toned High-
Grade Piano on
Easy Payments**

In 41 years we have built and sold over 40,000 WING PIANOS. All this experience goes into the WING PIANO of today, and makes it as high a grade Piano as you can buy. Thousands of customers yearly write us of the tone and durability of their WING PIANO.

Four Weeks' Free Trial. Some pianos sound well in the warerooms but are a disappointment in the home. WING PIANOS keep their purity and power anywhere; that is why we make the unusual offer of sending you one for 4 weeks on trial in your own home without payment or deposit. You can be the judge of it in the place in which it must be used. We pay freight both ways, if after a 4 weeks' trial you decide not to buy.

Agents' Profit for You

If the Piano pleases you and you decide to buy it, the price will be from \$75 to \$200 lower than any other high-grade Piano on the market. This is possible, because we sell direct to the consumer. We have no agents. We do not sell to dealers. The \$75 to \$200 lower price is just the cost of selling through middlemen. We give that to you, for to you it belongs.

2 to 3 Years to Pay

When paying for a WING PIANO we give you a choice of many different ways of paying for it. A way to meet every possible circumstance in life.

We sell for cash or on the easiest kind of easy payments. And show you how easy it is to do business with us at a distance. No collectors or solicitors.

WING & SON
NEW YORK
CONCERT GRAND

YOU OUGHT TO KNOW ALL ABOUT PIANOS

We have in press a magnificent 156-page "Book of Complete Information About Pianos." It will be the most complete and costly book ever published by any piano house. It is a complete encyclopedia of the piano, giving its history and telling about its construction. Shows how to tell a good piano from a bad one. Gives you a good start toward a musical education. Our price for the book is \$1, but by sending now for our other free book, "A Standard Piano," which ought to be in the hands of every music-lover, it will show you how to get the big book free when it comes from the printer. The book, "A Standard Piano," tells in detail the business methods of the old house of WING & SON. Why they send Pianos for free trial—why they can undersell local dealers, and how you can pay for a Piano and not know it.

Cut out here. A pia will do.

WING & SON, 372-385 West 13th St., N. Y.

Send me your book, "A Standard Piano," without any cost to me or obligation on my part.

NAME.....

ADDRESS.....

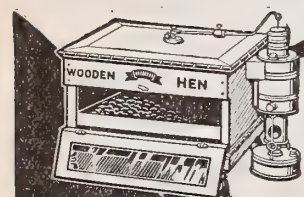

: : "RINGLET" : : Barred Ply. Rocks

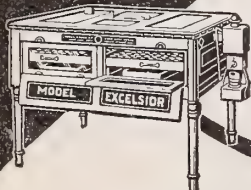

Have won more prizes at the leading shows of America than all others, which stamps their superior quality. I now have the finest and largest lot of exhibition and breeding birds I ever owned; they have the sharp contrasting colors, showing the Ringy barring, that win under all judges. Write me just what you want and I will make you a low price considering the stock you get.

F. R. Green : Lake City, Iowa

One of the oldest breeders of Barred Rocks in the West. At it over 21 years

**Hatch
Chickens
By Steam**

Stahl Incubators were among the first to be put on the market; to-day they stand as they did then—the best—approved by thousands of particular fanciers the world over.

This isn't luck—it's merit—perfect incubator value, produced by the right kind of material and workmanship, backed up by an unbroken line of splendid results. The

Excelsior and Wooden Hen INCUBATORS

have a standard hatching record of a chick from every fertile egg; they maintain this splendid showing because all features of their construction—heat, moisture, ventilation, and similar details—are carefully looked after and perfectly worked out.

The Excelsior or Wooden Hen will hatch a brood before your hens stop laying. You can market your early broilers and mature pullets into quick layers at a time when both will yield an extra big profit.

Buy a "Stahl" and eliminate trouble and worry. Catalogue illustrates complete line of Incubators, Brooders, Poultry Supplies, etc. Free on request.

The New Globe Incubator No. 10

The great merit of the Globe Incubators has been so well known to the poultry raisers of this country for the past fifteen years, that we feel the only introduction that the **New Globe Incubator No. 10** needs is a plain statement of the fact that in this machine we offer to the public an incubator of **Globe merit** built on plans that greatly lessen cost of production so that we are able to offer a

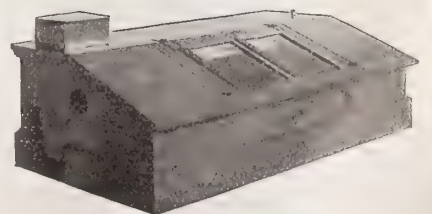

200-Egg New Globe No. 10 at \$13.50

Positively the best in the world for the money— This machine is fitted with the best double compound water regulator, the same as used in all higher priced machines and is honestly and substantially made throughout and will render efficient and satisfactory service and produce the best possible percentage of strong livable chicks that will grow and mature when placed in our famous

GLOBE BROODERS

200-Chick Size \$11.75—A brooder built on scientific principles that have been proven correct by actual practical use.

Get These Machines and Raise Your Chicks

Extra Special!

If ordered from this ad within thirty days, a 200-Egg Globe Incubator No. 10 and a 200-Chick Globe Brooder for only \$22.00.

Send for elegant colored circular fully describing these machines : : : :

Day-old chicks 10c each. Book orders now. Our exhibition matings are unsurpassed in shape, color, carriage and spread of tail. Eggs for hatching at bargain prices. Do not order elsewhere until you have seen our free mating lists—ready February 1st. Stock for sale.

Moore Bros., Moscow, New York

PARSON'S

Barred Plymouth Rocks

WIN FIRST PRIZE WHEREVER SHOWN—Our original stock was selected from one of the most noted prize winning yards in the country, and by careful selection and mating we have produced a strain that is not excelled anywhere. Under such judges as I. K. Felch, our birds in competition score from 90 to 95½ points. 400 BIRDS FORSALE, of the very choicest quality. Birds that win in the strongest competition; birds that will produce winners. We guarantee every bird to be as described or money refunded. This guarantee is what our business is founded on. Write today for what you want and mention American Poultry Journal.

CHARLES PARSONS & SON : : CONWAY, MASSACHUSETTS

S. C. Reds

Have fifty utility pullets for sale cheap. No more cockerels for sale. Am now booking orders for eggs from pens mated to produce that ideal shape for which my stock is noted. Write me before placing your order elsewhere and mention American Poultry Journal.

H. T. Marshall, R. R. No. 53, Sheridan, Illinois

KING'S FAMOUS

Barred Plymouth Rocks

LINGLET STRAIN—Do you want strong healthy chicks? Fine style, large bodies and great layers have been the keynote of my success. The breeding stock has large grassy runs, thereby insuring fertile eggs. My matings for 1910 far surpass those of former years. Many of the birds heading these yards have been the winners of highest awards in strong competition. With my enlarged facilities I can furnish eggs promptly at \$2.50 per 13; \$4.00 per 26. My guarantee is satisfaction and a square deal to all. I solicit your orders. For further information, write for mating list. Address

CONDIT'S

WHITE ROCKS

Lead all again at Chicago, the largest show in the West. They win again in the most coveted prizes, including first cock, first and fourth hens, second cockerel, second pullet, second pen and two specials for best cock and hen. If you wish birds to win in the winter shows I am prepared to furnish them. Send for free catalogue.

P. B. Condit, 2138 N. Capitol Ave., Indianapolis, Ind.

RIDGE VIEW FARM

PRACTICAL REDS

THAT'S it—Practical Reds. The kind that lay eggs like a Leghorn and make a roast like a Rock.

We have the best strain of Practical Reds in the U. S. We sell eggs that hatch. Send \$6.00 for 100 eggs from utility pens or \$10.00 for 100 eggs from selected pens. Get your order in now—don't wait until the last minute.

After years of careful breeding we are giving the fancier an opportunity to buy from our best stock at an exceptionally low price.

A. G. CLARK, WILLOUGHBY, OHIO

ver; 3d. B. J. Mountjoy; 4th, Rowland Sunny Brook Farm.

Why Pay More than \$7.55

for the Best 140-Egg Incubator made? Or \$11.50 for Incubator and Brooder Together? All Freight Paid.

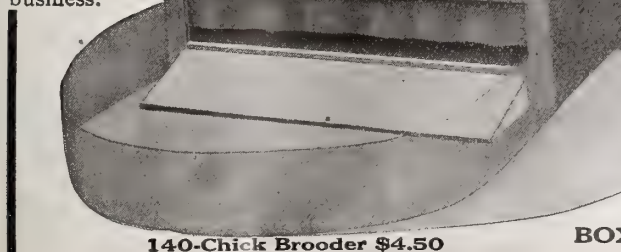

IF in a hurry to get a hatch started, you can send us your order right from this advertisement. Why not do so? Send us only \$7.55 for the complete 140-Egg Incubator or \$11.50 for the 140-Egg Incubator and 140-Chick Brooder both, and we'll ship at once—right to you—all freight paid—and you'll get off a hatch ahead of everybody else.

Of course you know you take no risk in ordering that way, because the editor of this paper knows us to be responsible—we've advertised with him so many years.

You can have 30 or 60 days' Free Trial on both Incubator and Brooder—and we'll send all the money back if you return the machine to us as unsatisfactory.

Thousands of people buy this way direct from the advertisement, which insures their getting quick delivery and having their orders filled promptly. **I guarantee to ship all orders sent from this ad. on day received.** But, do as you like. Write for full description, "Hatching Facts," which clearly explains these remarkable machines

and low prices, made possible by our great volume of business.

I've always given my customers more for their money than any other incubator manufacturer in the world—that's why we do so much business.

Belle City Incubators will hatch more chickens—under the same conditions—than any other incubator made, or your money will be refunded. **This I guarantee.** Double walls—dead air space all over—copper tank and boiler—hot-water heater—best regulator—deep, roomy nursery—strong egg tray—high legs—double door—and everything that's any good on an incubator—all in the Belle City. High-grade thermometer—egg tester—burner and safety lamp included. The Belle City Brooder is the only one having double walls and dead air spaces. I guarantee it to raise more healthy chicks than any other Brooder made. Hot-water top heat—large, roomy, wire runway yard, with platform—metal safety lamp and burner.

Over 50,000 machines in use—all doing perfect work. The Belle City should be your choice. Send your order now or send postal for full particulars. But don't pay more than my price. No machines at any price are better hatchers or brooders. Satisfaction guaranteed.

A Complete Hatching Outfit for only \$11.50

Conkey's Roup Remedy

recognized everywhere for years as the one reliable remedy for this dreaded poultry disease. No poultry owner should be without it. A thimbleful in the drinking water and the fowls eagerly drink and cure themselves. Give the well fowls a little occasionally; it will tone them up and prevent disease.

Conkey's Poultry Book
New 1910
Enlarged Edition

FREE

Send for your copy at once. The enormous demand is rapidly exhausting the edition. We want to place a copy in the hands of every owner of fowls.

Facts From Men Who Know
This book does not deal in theories or opinions. It gives you facts—the result of the experience of men who have spent years in the raising, care and handling of poultry. It contains instructive articles on Housing, Feeding, Egg Production, Breeding, Care in Sickness and Health, and hundreds of other things you ought to know.

It's Absolutely Free
Simply send name of the man from whom you buy poultry supplies, with 4c in stamps to cover postage, and a copy will be sent at once. **DO IT NOW**, or you may be disappointed.

IMPRESSIONS GATHERED AT NEW YORK.

Hello Bill:

As promised, I am giving you my account of how the Garden looked to me again this year. I did not think last year that you would publish my meanderings in the paper, but as you did, and tried to give me a couple of black eyes, I am going to write you again this year, and hope you will exercise moderation.

I arrived at the Garden in good shape and the first thing, I went to shake hands with Mr. Crawford. He certainly is a wonder and doesn't seem to get a day older, and then met Capt. Griffing, and as you know Captain, he had a good word for everybody, then came across Barney Mosher. Barney got stuck this year, but his corps of trusty lieutenants with "fats" was on hand and got everything going nicely.

I first took in the display around the Garden. I started at the front, and the first display that caught my eye was the Magic Egg Tester. It was two pieces of wood, one suspended by a screw eye to the other and the man professed to tell which egg had a germ in and if it had a male or female germ. If it had a male germ it moved with a circular motion. If it was a female germ it had a swinging motion and when it had no germ it stopped instantly. It was very interesting, if you could have seen it. Being of an inquisitive turn of mind, as almost all poultrymen are, a few of us got together and gave him an egg from

a pen of females, an old maird's home, and then had another boiled ten minutes. He told us that the both of them had male germs in them, whereupon the results were presented to the notice of Prof. Crawford, who passed on it and gave a decision of no proof and he was introduced to the cold, cold world.

Next to that was Rubberoid, with a kind of a blower that drew attention to its many good qualities. Then there was the Chapman Trap Nest and a device for holding chickens while picking. Then came the Tolman Portable House, doing a good business, and then came the Reliable Poultry Journal. Brother Curtis evidently being dis-

LAWN FENCE

KITSELMAN BROS.
Box 295, MUNCIE, IND.

BROWN POULTRY FENCE

Does Not Cost One-Half as Much as Common Chicken Netting, Yet Will Last Five Times as Long

Size of Wires. The top wires are No. 9 1/2 gauge—same as nearly all stock fence's. Intermediate and stay wires in same proportion—all double strength high carbon spring steel wire.

One Inch Spacings. More closely woven by far than other poultry fences, because bottom wires are only one inch apart, balance in same proportion—absolutely chick tight and rabbit proof.

Stock Strong. Built of material heavy and strong enough for hogs, horses and cattle. Wires cannot possibly slip, sag or bag down.

Rust Proof. The double galvanizing of every pound of wire in Brown Poultry Fence insures the fence against rust for many years.

Saving in Cost. With No. 9 1/2 top wires, you can save at least one-half the posts, and besides you require no top railing or bottom boards. These items alone usually cost more than the fence.

Price. Our prices are less than common netting costs. Before buying any poultry fence, get our catalog and prices. We have 160 styles of fences to select from.

For a poultry proof fence woven close enough to confine small chicks yet strong enough for cattle, this fence cannot be equalled anywhere or at any price.

Write Today—We pay the Freight
The Brown Fence & Wire Co.
DEPT. 3 CLEVELAND, OHIO

gusted with newspaper row came up with the class. Then came Cyphers with a good display of incubators and brooders. Mr. Dillingham had charge and was very much in evidence. He used to breed White Wyandottes, but I still think he should breed game Bantams. However, he is a right good sort. Eddie Burger was right hand man and what he can't tell you about the Cyphers goods is not worth listening to. Eddie is certainly on to his job. Then there was Potter. Potter is O. K. on the incubator question, also an undoubted authority on the female question. These were ably backed up by Chas. Adair, from the Home Farms, and in the evening by Prof. Myers and others from the downtown store. Then the Excelsior, in charge of Mr. Condon, put up a good display of poultry supplies and Buckeye incubators. Next came Stumpp and Walter with veteran Frank Gaylor in charge. Frank is all right. He seems to be working hard for a good business season. He was made secretary of the Orpington Club at its meeting and it is up to Frank to get the boys in harmony once again. They put up a good show, especially on the Prairie State and "Mac" was around to help him out. Then came the big rough boy from the East, L. P. French, with a new twelve-hundred-egg incubator that he was willing to swear by. Then came the newspaper row where all the barkers from Coney Island seem to have collected, in fact, I think they could give them aces and spades and beat them. On the other side, going down, Park and Pollard put up a good display of their Lullabye brooders. This is a new concern in

New York, and of course, if you haven't any chickens the old lady can use the hover as a night cap. Then came the Hall people with young Hall and Prof. Platt, late of Poultry Husbandry, handling the exhibit, with Mr. Yelton bringing up the rear. It made a good trio. But, Bo, you should have seen Platt's plush lady. Then came the United with Corporal Bill Smith in charge. They put up a fine display of poultry supplies with a small tank of fancy ducks and some cages with fancy birds. Then came the famous Lakewood Farms Company. This was the talk of the floor. The one and only A. G. Brown was on the floor all the time and by the end of the week he must have been quite hoarse, as he certainly was in demand all the time, either explaining the great Lakewood Farm's idea of co-operation or dilating upon the merits of Hen-e-ta. He was backed up by their worthy treasurer, the Right Honorable Andrew Albright, known as the man whose bristles don't come out, or in other words, the maker of Rubberset brushes, also one of the greatest dog judges in the land. Vice President Mr. Kaufman put in a few minutes when duties didn't call him otherwise. Kaufman, you know, is a great ladies' man. Then there was Harries on the job fitting between his champion winning Orpington pen and the exhibit. Also Prof. Cook, their manager of the egg department, the man born with a grouch, also Prof. Doolittle, who seemed to be doing much. He seemed to be rather out of place with this bunch, for he is a minister's son. Next came Groosback, the Elm Poultry

Yards; they had quite a list of poultry supplies. There was a dog, cat, rabbit, chickens and other various animals all living together. Then came the famous Boston Hopper, who reported good business. Doubleday, Page Company doing good business with the poultry and dog books, and then Stringham, the Bee Man, with two more pretty girls. Where he gets these pretty girls is a mystery, but every year he turns up with two dandies. Then J. H. Robinson, the Bostonian, was going around with Prof. Bell, of Canada, and one of the most interesting displays at the show. Then came Jerry Foster, of Rancocas Farm, with Robinson and Bell getting into an argument with Prof. Lantz on Hen-e-ta. We also saw Brother Trafford, of Poultry Success, whose chief claim to glory lay in the fact, as he said, that he did not ask a single man for an "ad." Then we saw Denny. Denny certainly worked overtime at the show, and I think he made good. He certainly deserves to. Then I saw Shilling. He is getting so high in the world that he would like to change his name. He is worth more than a mere shilling now. Sewell was also on hand and was looking not much the worst after his recent illness. Then came the Spratts' display. They were at their old corner, which on this occasion was a very cold one. It was manned by Mr. Moull, Bill Bailey, as big as ever, with a smile that won't come off, and Deacon Sparks. Every one was glad to see the Deacon around again, and although he was not showing any birds, it was a pleasure to have him around, but Bill, you should have seen a postal card that I saw on Thurs-

"Tycos"

Hygrometers

for Indicating Moisture (Humidity)

are just as carefully, accurately and honestly made as "Tycos" Thermometers—that means "moisture insurance."

In artificial incubation the question of Moisture, or Humidity, is almost equally as important as Temperature.

Millions of chicks die in the shell every year because of too little or too much moisture.

Without the correct percentage of moisture at certain stages of incubation, strong, healthy chicks cannot be hatched, no matter how exact the temperature may be.

Don't risk your eggs, time and money when you can insure your hatching results by equipping your incubator with a "Tycos" Thermometer for temperature regulation, and a "Tycos" Hygrometer for moisture control.

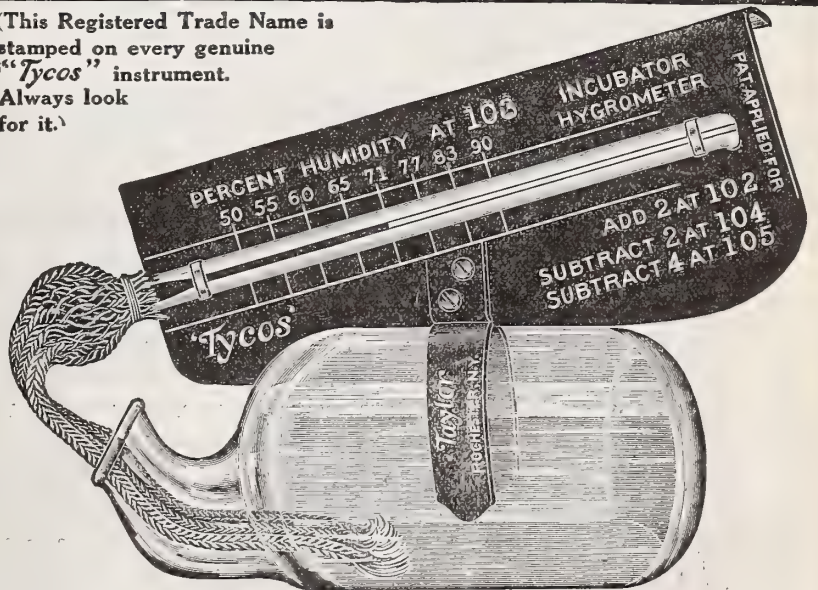

For sale by up-to-date incubator manufacturers, poultry supply dealers, seed men, etc., everywhere.

Insist upon having the "Tycos". See that this name is stamped on your Hygrometer and Thermometer.

Send today for circular on Hygrometer, and booklet "Thermometer Facts Worth Knowing."

Taylor Instrument Companies, Rochester, N. Y.

(This Registered Trade Name is stamped on every genuine "Tycos" instrument. Always look for it.)

day morning of Bill Baily, Chas. Smith, George Weed and Ernest Miers in an automobile, that was taken on the night before. If that bunch can convince their wives that they did not fall from grace on that occasion I am a Dutchman and will hand them a leather medal. Weed looked like he ran up against the street cleaning department. Miers was cold. Charles Smith looked as though he was going to start a prayer meeting, while Bill Baily didn't care a d—n. By the way, Weed still retains his beautiful Orpington type. We also run against A. C. Hawkins. He was doing more business than any man in the Garden. Hawkins did not get a first this year, but he made a rattling good run for it. Also E. B. Thomson was on hand as a visitor. Schwab judged the Barred Rocks. The great and only A. C. Smith was around with a continual smile. Mr. and Mrs. Hayner were also on deck, and Jony held a pullet among the choice few which made him joyful. Hillson was there also, but we failed to discover another talk for the centuries to come. Then we came across Davey, who made a splendid win with his White Rocks, and certainly this fellow has a machine for turning them out, as every year he turns them out like peas in a pod. He and D. W. Young ought to be inhibited from showing until they tell others how to manufacture those birds. Dan Young was not so joyful this year as usual,

having been defeated on pen, and as he and Mr. Hallock love each other with the love that knows no bounds, it was not all honey to Dan when Pine Top got first, however, there are other years to come. Corey was not as happy as usual and was breathing threats that was something awful. Delano seemed to be well pleased. Owens Farms has certainly got there. Mrs. Haring was also on the floor with the good Orpington type. It was too bad that she could not have her husband there this year. We hope it will not occur again. Then we met Trethaway with a grouch on, and I think he was entitled to it. Then we met Mr. Prescott. Prescott is a man we all like to meet and wish he would bring down birds that would get into the money, as we would all like to see him win in this good competition. You should have heard him tell us about his Jersey bull. Then we met Mr. Barnum, one of the best of good fellows and a splendid president for the Orpington Club, who showed their appreciation by re-electing him. Time and space is limited on this and I can not tell you of meeting President Bryant, Charles Cleveland, Leslie Tomkins, the pigeon and turkey men, and a host of others, but we must tell you about Percy Cook and his great draperies on his pen. They certainly were gorgeous as well as the lady that helped to put them on. Then Mr. Kellerstrass was around, not looking as happy as he should, still he

must remember it is all in fortunes of war. Then George May was there showing the Kellerstrass strain, and I thought it good to tell you about one man showing a single comb White Wyandotte pullet. Fancy one of these getting into Madison Square Garden. However, it must have been a mistake, but if I think of any more I will write it again for next month, but now I have got to finish.

From yours truly,
Single Comb Buff.

COOK & SONS AT THE GARDEN.

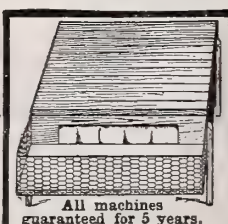

Mr. Percy Cook was there with a nice string of Orpingtons in all varieties and had a booth, and Percy was here and there and everywhere, but mostly in the Orpington alleys, where his birds were to be found, and always making sales. Mr. Cook remarked late Saturday night that he had sold more birds at this show than ever before and that he had been so busy he had not even had time to count up what they amounted to, but he showed us a roll of bills and checks that was as large as one could hold in one hand. We are sure he took in more money than any other man in the garden. Had you seen this roll of money, you would never question the fact that there is money in producing fancy poultry, especially when you produce quality like Mr. Cook does.

125-EGG WISCONSIN INCUBATOR \$10 AND BROODER--BOTH FOR

If ordered together we send both machines for \$10.00—freight paid east of Rockies. Hot water, double walls, dead air space between, top has three walls, double glass doors, California Redwood, copper tanks, boilers, self-regulating Nursery underneath egg-tray. Both Incubator and Brooder shipped complete, with thermometer, lamps, egg-testers—all ready to use when you receive them. Incubators finished in natural wood showing exactly the high grade lumber we use. If you will compare our machines with others offered at anywhere near our price, we will feel sure of your order. Don't buy until you do this—you'll save money. It pays to investigate the "Wisconsin" before you buy. Read the letters below—they are actual proof from users, showing the success they are having with our machines. This is the most convincing evidence you could get. Send for the free catalog today or send in your order and save time. Ask the publisher of Farm Journal or The Commercial and Savings Bank of Racine, Wis. about our responsibility.

Thos. J. Collier, Mgr., WISCONSIN INCUBATOR CO. Box 50, Racine, Wisconsin

All machines
guaranteed for 5 years.

Wis. Inc. Co.

Dear Sirs:—We received the Incubator and Brooder in good shape, and to our surprise, not having any experience with incubators, the first hatch was 94%, the second was 96% and the third, 98%. We did not know anything about operating the machine, but old, experienced poultry men say that is a grand record.
J. F. BELTZ, Prop. Ideal Farm.

Tolles, N. D.

Wis. Inc. Co.

Dear Sirs:—We are well pleased with the incubator which we bought of you. We obtained good results with it. From 455 fertile eggs we got 416 chicks. I think it was a good hatch. I do not think any incubator can beat that. The Wisconsin is O. K.
JOHN DOUGLASS.

Evansville, Wis.

Wis. Inc. Co.

Gentlemen:—I had good success with your incubator. I got 93 chicks from 97 eggs and 97 chicks from 103 eggs. I think the Wisconsin is a fine machine. There may be others as good, but I don't think there is any better. I have neighbors who will send for one this winter. They are so well pleased with mine.
HECTOR DENNISON.

Lockport, Ill.

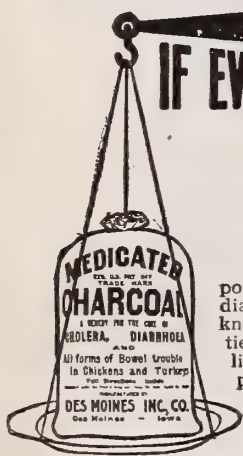

IF EVERY POULTRY RAISER USED OUR REMEDY 150,000,000

MORE CHICKS WOULD ANNUALLY BE RAISED TO MATURITY.

Save Your Chicks' Lives By Using MEDICATED CHARCOAL

We have the greatest remedy for the common chick ailments that ever went into the poultry-yard. Our Medicated Charcoal not only prevents but cures bowel troubles, diarrhoea and cholera. Charcoal alone is a valuable health-giver, as every poultryman knows. We have made it doubly valuable by giving it just the right medicinal properties. It purges, cleanses, purifies the blood, kills germs. It gives health, vigor and life to both fowls and chicks and renders them immune to disease. Carefully prepared under a scientific formula and guaranteed under the Pure Food Law. Cost is nothing compared to the good it does in saving chicks' lives. Don't fail to try it. In bags of convenient size: 10-lb. bag, \$1.00—25 lbs. \$2.25—50 lbs. \$4.25.

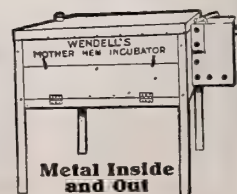

Des Moines Incubator Co., 269 Fourth St., Des Moines, Iowa

Mother- Incubators and Brooders

Our Incubator is covered with galvanized iron inside and out. It is padded on the inside and out with asbestos board and paper. It holds the heat, saves oil and maintains an even temperature—you don't have to set up nights with it—self-ventilating. If you want a cheap machine don't bother us, we are busy. Our BROODERS are the first invented that provides a warm flannel to lay on the chicks back—mother-hen. No steps to climb, no crowding, all metal. Send for our Book No. 2. "The Incubating and Brooding Question Solved."

AUTOMATIC HATCHING COMPANY, Holly, Michigan

Metal Inside
and Out

THE BOSTON SHOW

The fourteenth annual exhibition of the Boston Poultry Association came to an end Saturday, January 15, 1910, after one of the most successful shows ever held by the association. We were informed by Secretary Atherton that the increase of entries this year that occupied about five acres of space was something over 300 in excess of the last show. The crowds that attended at Boston this year seemed larger than ever before, which gave us assurance early in the week that the exhibition would be an unqualified financial success. Secretary Mr. W. B. Atherton seemed to carry the tremendous task of handling the enormous exhibit lightly on his shoulders, being ably assisted by an efficient corps of attendants, and when the exhibition opened Tuesday morning, everything was in readiness for the judges to begin their work.

The banquet given Tuesday evening by the management to the exhibitors was a most enjoyable feature of the show. Secretary Atherton had a pleasant smile for everyone, and the fair and generous treatment accorded to all was much appreciated. Another event that I wish to make special mention of is the dinner given on Wednesday by Mr. Atherton to the veterans of the poultry fancy.

As one entered the Mechanics' Hall, the finest display of pheasants, rare varieties of water fowl, pigeons and pet stock that we believe was ever on exhibition was to be seen. Then came the exhibit of poultry supplies represented by nearly all of the large houses in the east. On the left, the poultry journals and other pet stock periodicals were well represented with nicely decorated booths. As we pass, we come to the large hall containing the main exhibit of poultry. It was hoped that all the varieties could be cooped together, but the bantams and much of the pet stock occupied the upper floor, known as the restaurant. Leading from this room to another hall, we find one of the largest and finest exhibits of cats, we believe, ever brought together under one roof, which attracted much attention, especially of ladies, during the entire show. The association makes a special feature of their cat show and some of the most famous winners of Catdom are to be seen here annually. There were approximately 6,000 entries, all told, in poultry, pigeons and pet stock.

The New York State Agricultural College of Cornell and the Maine Experiment Station were represented by exhibits from these two institutions,

showing what is being done, and their booths were the source of much attraction and favorable comment. Cornell captured the cup.

The club meetings at Boston this year were the National Columbian Wyandotte Club of America, the Partidge Wyandotte Club of America, the American White Wyandotte Club, the American Dorking Club, American Plymouth Rock Club, New England Silver Penciled Wyandotte Club, the American Hamburg Club, the National Rose Comb Rhode Island Red Club, New England Light Brahma Club, the Massachusetts branch of the Poultry Association, the Pet Stock Breeders, the Massachusetts State Poultry Association, the Carneaux Helmet Club, the Exhibition Working Homer Club, the Hamburg Fanciers' Club, the American Polish Club, and the New England Golden Wyandotte Club.

Show Notes.

Among the Journal readers we met at Boston was Mr. John S. Martin of Port Dover, Ontario, Canada, the originator of the regal White Wyandottes. Mr. Martin seemed to be feeling well over his victory of winning more points on young stock than his worthy competitors. Mr. J. W. Andrews, who came from Dighton, Mass., with his grand exhibit of White Wyandottes, had a pleasant smile for all, we assume, due to his victory in cockerels.

Mr. William Barry Owen spent a couple of days at the show, shaking hands and renewing acquaintances with his many friends. Mr. Owen is certainly doing a great work for the poultry fanciers and we wish him an unqualified success. Manager Morris F. Delano was in charge of the Owen farm exhibit and was so busy taking orders that we were unable to have our hoped for visit.

Mr. Arthur Dustin was on hand with

Make Your Hens Lay

A FREE BOOK FOR YOU ON MAKING HENS LAY

Write today for our free poultry books and learn at once what it might take you, alone, years of costly experience to find out. You know how eager fowls are for bugs and worms. Our book tells why. Briefly, it's the animal food they want, and **must have**, in order to thrive best. Chicks, laying hens, cocks, all need it—to develop frame, muscle, feathers, to produce many eggs, to produce fertile eggs. To replace bugs and worms in winter, or, for yarded fowls, feed freshly cut raw bone, prepared with

MANN'S LATEST MODEL BONE CUTTER

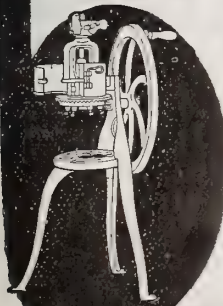

Try One Free—No Money Down

This feed is four times richer in protein (the egg-making, body-building element), than corn is, and it is more easily digested and assimilated. **Save** money by cutting down your grain ration. **Make** money by getting more eggs when eggs are worth most and by having better eggs for hatching stronger chicks, earlier and heavier broilers.

Mann's Latest Model Bone Cutter cuts the bone (and all adhering meat and gristle) into a fine, soft mash that fowls of all ages relish and can put to immediate use in producing profit for you. It turns easily, cuts rapidly, never clogs, wastes nothing. We sell it on **10 Days' Free Trial**, without money or deposit in advance—so you may be sure it is right. We even pay its freight back if you are not satisfied.

WRITE FOR FREE BOOKS TODAY. To read them is to know how to feed poultry for most profit.

F. W. Mann Company, Box 56, Milford, Mass.

10 to 1 They Dare Not Do It

Simple, sanitary, easy to clean, Sharples Dairy Tubular Cream Separators probably replace more disk and other common separators every year than any one maker of such machines sells. Common separator makers use absurd pictures and statements to mislead you into believing it is the other way around—that their machines are replacing Tubulars. We offer them this chance to dispute the facts:

Let any one of them print the names and addresses of all persons who have—for any reason whatever—exchanged Tubulars for his machine during 1909. We guarantee to print a list at LEAST TEN TIMES AS LONG of those who have discarded his class of machines for Tubulars during 1909.

These makers dare not accept this offer. The facts would end their business. This should decide you to get the Tubular—The World's Best—and no other. Sales exceed most, if not all, others combined.

Paint Without Oil

Remarkable Discovery That Cuts
Down the Cost of Paint Seventy-
Five Per Cent.

A Free Trial Package is Mailed to Every-
one Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufr., 70 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write to-day.

a display pen of White Wyandottes which contained many of his New York and Boston winners. This pen of Mr. Dustin's was the center of much attraction.

Mr. A. C. Hawkins' display pen of cockerel bred Barred Rocks contained a male of about the highest quality that we have seen to date. It was reported that Mr. Hawkins sold three Barred Rocks for \$500, and we saw a check tendered him of \$200 for the male bird that headed the display pen. He was also offered \$500 for this male and four females.

Grove Hill had a display pen of Barred Rocks which was headed by the first place New York cock bird who also won the shape special, and a pen of brown Leghorns, also headed by the first New York cock. Mr. Arthur Smith, superintendent for Grove Hill, had these pens in charge and was quietly looking after the Grove Hill interests. Mr. William Ellery Bright, proprietor and owner, spent a few hours at the show and we had the opportunity of renewing acquaintances.

We also had the pleasure of meeting Mr. C. W. Pratt, North Abington, Mass., who felt very proud over his win of second cockerel in the Columbian White Wyandotte class. Mr. Pratt made a good exhibit of White Wyandottes.

Mr. C. W. Bryant, president of the American Poultry Association, was on hand to judge the Rhode Island Reds, and his decisions seemed to give general satisfaction to all.

We were also glad to welcome Mr. S. T. Campbell, secretary and treasurer of the association, and had a pleasant chat with him. Mr. Campbell reports a large increase of members during the past year and looks for a large attendance at the next annual meeting.

Charlie Wells, of Fluffy Ruffle fame, who officiated as judge in the Barred Rock classes, was unable to spend the entire week at the show, due to pressure of his poultry business at home. We have a special report of the Barred Rock classes written by Mr. Wells and expect it will be highly appreciated by the readers of A. P. J.

We had a very enjoyable visit with Mr. Frank W. Briggs, of the Pittsfield poultry farm, Pittsfield, Maine, who was in charge of their splendid exhibit of Barred Rocks, and hope in the near future to visit this plant and tell our readers about the many high quality birds owned by these farms. We understand that Mr. Briggs was highly gratified with the number of sales made at the show, the same being very complimentary to the quality of stock shown by him.

Mr. C. H. Shaylor, Lee, Mass., could be found any time near his winning Barred Rock pen, showing their good qualities to the interested spectators.

The Barred Plymouth Rocks and Single Comb White Leghorns exhibited by Pine Top Poultry Farm, Hartwood, N. Y., were in charge of Manager Winchell, who reported to us a splendid business at Boston. Mr. J. H. Hallock, owner of Pine Top, came over from New York to spend a few hours at the show.

Mr. Loren H. Brown was there and showed the quality of his Golden Wyandottes, which were considered second to none. It was a strictly high-class exhibit throughout.

Mr. F. O. Grosbeck, of Elm Poultry

THE MADE-TO-ORDER CREAM SEPARATOR

The dairy farmer who buys a 1910 De Laval Cream Separator gets a machine that is really made especially to order for him.

First: Because the 1910 De Laval is designed and constructed, without sacrificing any vital feature, to meet the comments and criticisms gathered from over 1,100,000 dairy farmers to whom De Laval machines have already been sold.

Second: Because if he should offer to pay ten times the ordinary price he couldn't secure a closer skimming, a greater money, time and labor saving, a more durable, a more convenient or an easier running separator than the 1910 De Laval.

Lastly: Because every feature of the 1910 De Laval machine from top to bottom is just as the best mechanical as well as the most practical engineering demands that it should be.

The De Laval is the made-to-order cream separator without the made-to-order price. The De Laval catalogue tells the whole story. Ask for a copy.

KITSELMAN BROS.
Box 415 Muncie, Indiana.

Yards, Hartford, Conn., reported many sales made for his firm.

Mr. W. R. Graves, Rockandotte Farm, Southboro, Mass., was in attendance at the show the whole week, looking after their exhibit of which their first prize White Plymouth Rock cockerel was the center of attraction. This bird was awarded the Color Special and the \$100 Challenge Cup for champion male.

Mr. Mattison, of Mattison & Toel, South Shaftsbury, Vt., was in charge of their Buff Wyandotte exhibit and was receiving congratulations on winning every first prize offered in the Buff Wyandotte class.

Mr. J. P. Keating, Westboro, Mass., Columbian Wyandotte specialist, is also to be congratulated on his win of first on cockerel, first and fourth cock, third, fourth and sixth hens and sixth pullet. He was also awarded a silver cup for best cockerel, special for best display, special for best cock and fourth hen. Special for best cockerel and fourth pullet, special for best shape male and special for best colored male. When it is remembered that the Columbian Wyandotte class was the largest class in the show, this winning is all the more merited to Mr. Keating, and proves the quality of Columbian Wyandottes bred by him.

Mr. Elden S. Cooley, Frenchtown, N. J., who makes a specialty of high-class White Leghorns, was also at Boston, and won second on cockerel, second on pullet, and third on hen. Mr. Cooley has a large day-old chick plant and sells chicks by the thousands in both White Leghorns and Barred Rocks.

Mr. H. E. Challis, South Danville, N. H., was a prominent winner in the Single Comb Buff Orpington classes and was kept busy explaining the high quality of his stock to those interested.

We had a pleasant chat with Mr. Henry P. Prescott, Derry Village, N. H., the Orpington breeder, and hope to give the readers of the Journal a description of his plant and birds at a future date.

The exhibit of Dorkings, Hamburgs and Polish, in both numbers and qualities, at the Boston show this year was without doubt the finest ever made here of those varieties, showing the renewed interest being taken in them by members of the fancy. We have been promised a special write-up of the Dorking classes by Mr. Weston Westfall, of Sayre, Pa., which we believe will be of special interest to our readers.

Dorkings.

The Dorking classes totaled 71 birds, of which 59 were Silver Gray, six colored and six white. Mr. Mowll did the judging and placed the awards as follows: Cocks, 12. First—Westfall, the sensational champion cockerel of last year's show, in beautiful feather and condition, stands out from the others, winning his position easily. Second—Inches, good size and color, except hackle, which is quite coarse and raw looking. Carries body too upright and breast is not deep enough. Worst fault is a weak, soft comb that falls over about enough to disqualify. Third—Westfall, is extremely large, just makes his pen full, extra long body and straight back; very straight and nicely serrated comb and fine color throughout. Our choice for second place. Worst fault is a ragged and broken tail, which may have put him back. Fourth and sixth, Officer. Fourth is good color, but not best of form, being

My New Fairfield Incubator

Will give you the largest hatches and healthiest chicks. It's the "World's Best Hatcher."

That's what my customers call it! Their experience has proven it to be all that for them and you too. Now isn't that the kind of Incubator you want in your poultry business? Just let me send you a Fairfield to try for two full hatches free in your own home. I guarantee it to give you bigger hatches and better chicks than any other Incubator made, or your money back and I will pay the freight. You can't beat this offer anywhere. You can't beat the Fairfield Incubators and Brooders at any price. Let me prove it to you at my risk. Write for catalog and special free trial offer today.

No Incubator on the Market Like Mine. The Fairfield is made out of California Redwood. Copper Steam and water patented heating system. Perfect regulator. Best lamp in any Incubator made. Large roomy nursery and egg chamber. Double doors. Unobstructed top. In every way as good an Incubator as you can buy at any price. Our direct-to-you-price saves you one-third to one-half. THE SURE HATCH INCUBATOR.

We strengthen our guarantee by sending every purchaser of a **Sure Hatch**, a Surety Bond issued by the Bankers' Surety Company of Cleveland, Ohio. This Bond says that the Bankers' Surety Company holds itself responsible for the carrying out of our guarantee.

This Bond is not a worthless piece of paper, but has the entire capital and surplus of this million dollar Bonding Company behind it.

You can not buy another incubator at any price that will give you such a guarantee of satisfaction as this.

The **Sure Hatch Incubator** is built of the very best materials and constructed along lines that **always** insure perfect hatching results. We know this is true or we could not give the guarantee that we do. The Bankers' Surety Company has investigated thoroughly our machine and the standing of our Company, and they know that the **Sure Hatch** is the best incubator on earth, or they could not risk their money in backing our guarantee.

Sure Hatch Incubators never fail to hatch the fertile eggs. The double Redwood walls with dead air space between for insulation, the dependable hot water heating system, the sensitive heat regulator and the economical, steady burning lamp are **Sure Hatch** features that are **unequalled in any other machine**.

Don't take any chances when you buy an incubator. **Sure Hatch Incubators** cost less than any other dependable incubator, and with the **Sure Hatch** you are absolutely sure of satisfaction. You can't be so sure with any other.

We will send you a **Sure Hatch Incubator** on **60 days free trial**. We will send a guarantee and a \$1,000,000 surety bond with it. **We will pay the freight.**

You will want to start your early hatches soon, so do not delay if you want the incubator when you are ready.

Write today for our big 100 page Poultry Book. **It is free.**

SURE HATCH INCUBATOR CO.

Box 6

Fremont, Neb.

too upright and flat in breast. His worst fault is a large badly-wrinkled comb, which gives him an ugly appearance. Pen 1062, Hales, we very much preferred for this position. Sixth also had a badly wrinkled comb, but had better breast and general form. Fifth—Jacobus, a nice smooth-looking cock, would have done better with more size.

Hens, 17. First—Weld, is large and very long back and body, fails some in breast development, but a fine hen and wins well. Second and color Special—Westfall, a very large deep-bodied hen with most excellent bright contrasting color. Third—Jacobus, much on the order, but not so silvery in color. Fourth—Inches, good color, but much smaller; not in good condition. Pen 1037, same owner, or 1050 Hales and 1047 Westfall, we preferred for this position. Fifth—Jacobus, very low set, nice in color and fair size. Sixth—Officer, fair size and form, moderate color.

Cockerels, 13. First—Weld, quite a typical bird, very large and correct form, his only failings seeming to be a somewhat mottled breast and a tremendously large comb, the latter being a characteristic of a certain English strain. Second, third and fifth—Westfall, three grand birds, penned in excellent feather and condition. Second is also very large, said to weigh 10 pounds, and looks it. Not as pure on top as his English competitor, but excels on under parts and breast, which are exceptionally pure and sound. Comb very evenly serrated and of proper size, tail extra long and carried at the right angle. Third—The New York winner, still in fine form and condition; very deep long body and the lowest set bird of the lot. Fifth—Not so good form as the other two and some higher on the leg, but very fine color. Fourth—Inches, good size and form, fair color, comb too large and falling over. Sixth—Jacobus, rather small, moderate color and form. We liked pen 1056, same owner, much better.

Pullets, 12. First—Westfall, the New York winner, secures the champion challenge cup for best female and Special for best shape. This pullet is hard to criticize in any way; she has beautiful color throughout, combined with most excellent form and plenty of size. Second and third—Weld. Second is about equal on size, but well beaten on form and color. Third—Better form and color than second, but not so large. Fourth—Inches, very good size and form, but coarse and mossy in color. Fifth and sixth—Inches, both good size and form, but fail on color.

Colored cocks, 2. First—Inches, fair size and color, not in best condition. Second—Warrington, we thought, should have won, equal in size and form and certainly better color.

Hens, 4. All owned by Mr. Inches.

White cocks, 2. First—Hales, very good size and form, but not very pure in color. Second—Warrington, not so good size and form, but better color.

Hens, 2. First—Hale, again has fine size and form, but fails color. Second—Warrington ahead on color, but fails size and form.

Cockerels 1 and pullets 1—Both owned by Warrington and very fine specimens indeed.

Light Brahmas.

Cocks (6)—An exceptionally strong class.

Hens—Brought out the same number of equal quality.

Cockerels (8)—Every bird a win-

ner in most any competition; not enough prizes to go around.

Pullets—This class contained ten of the nicest pullets we have seen exhibited this winter.

Dark Brahmas—This class contained eighteen birds of exceptional merit.

Buff Cochins—Contained a solitary cock, hen, cockerel and pullet in each class of good quality.

Partridge Cochins—Contained the best lot of birds of this variety we have seen to date, many of the best breeders of the east exhibiting.

Black Cochins—Were very good classes of this breed, birds of exceptional merit being shown. A decided improvement was to be noted, especially in males.

White Cochins—A class of seven extra good birds faced the judge, all shown by one exhibitor.

Black Langshans—One of the best classes we have seen in a long time were shown here, and in many cases there were not enough first prizes to go around.

White Langshans—Contained but a cockerel and hen.

Barred Plymouth Rocks.

Cocks (11)—Bird after bird of the very best quality was shown in this class and no reader can frame an opinion of the work it took for Judge Wells to decide the prizes.

Hens (28)—Shown in the pink of condition. Winners all of exceptional merit, only the slightest difference to

be noted between the first and the six other prize winners.

Cockerels (20)—Here again was quality galore, the very cream of New England's breeders having their best on exhibition. Owen Farms and Pine Top were good winners in this class.

Pullets (27)—Here again was a class of the very highest quality. Many of the unplaced birds could win in almost any other competition outside of New York and Boston.

Pens—At Boston pens were shown in both fowls and chicks, the second prize pen shown by Owen Farms being of exceptional merit. Third went to Pittsfield Poultry Farm, Pittsfield, Me., on a pen of grand, good quality. In pens of chicks, Pittsfield Poultry Farms won the blue, closely followed by Mr. C. H. Shaylor of Lee, Mass. Third, fourth and fifth, all well placed, the fifth prize pen shown by Pine Top Poultry Farm, Hartwood, Sullivan County, N. Y., we believe would have gone higher but for condition. Judge Wells has kindly furnished us with a brief sketch of the birds in the Barred Rock class, which we believe will be of much interest to our readers.

White Rocks.

Cocks (10)—First and second to Owen Farms, two of the best cock birds yet exhibited by one breeder. Third, fourth and fifth all close up.

Hens (11)—Owen Farms won first, second and third in another class of the very best White Rock hens to be

had in New England.

Cockerels (26)—First and third to Rockandotte Farm, Southboro, Mass. The first prize cockerel is one of the very best birds of the breed, we believe, that has ever been shown at New York or Boston. Second, Owen Farms, the second prize bird being one of the best of the quality. Third, fourth and fifth, all worthy, of better positions but for such strong competition.

Pullets (16)—First and second, two grand birds, belonging to Mr. G. D. Tilley. The balance of the class all close up to the winners.

Pens (7)—First pen another Owen Farms win; one of the best pens ever exhibited at Boston. Second, third, fourth, fifth and sixth all good pens but lacking the quality and finish of the winners.

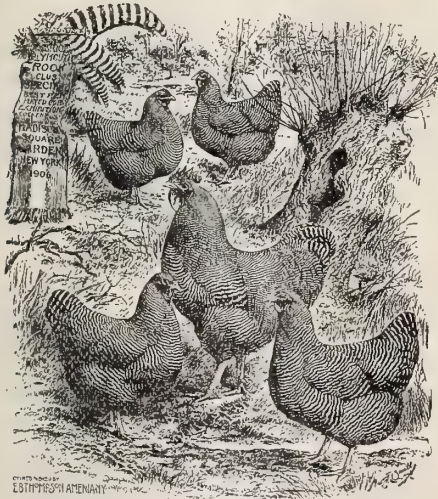

Buff Plymouth Rocks.

Cocks—A hot class, Mr. W. J. Corey, Springfield, Mass., winning second with one of the best male birds out this year.

Hens (16)—We believe that such good Buff Rock hens as shown at Boston rarely meet in competition under one roof. In this class in recognition of the quality four sixth prizes were awarded.

Cockerels (16)—Here again there were not enough ribbons to go round, and the quality was recognized by awarding four sixth prizes in this class.

Fashion's Proudest Birds are "Ringlets" E. B. Thompson's Barred Rocks

Winners of Special Prize for Best Pen mated to produce Exhibition Cockerels, at Madison Square Garden, New York.

are identical to success in Barred Rock breeding; they combine all the great qualities of size, style, shape, heads, barring and color which have made the "Ringlets" America's leading strain.

Their conquest of Madison Square Garden, New York, for more than 20 years is familiar to every Barred Rock fancier throughout the civilized world. The record stands alone and puts all others in eclipse---it is the most remarkable in the annals of poultry shows.

My producing the beautiful "Ringlet" feathers on Barred Rocks is recognized as having passed far beyond the realm of experimental theory. I never had so many superior exhibition and breeding birds---both male and female---with which to supply my customers all over the world as now, and all fanciers who visit my farm declare the stock is a revelation in the science of Barred Rock breeding. I can furnish you any birds you may want at reasonable prices and will assure exceptional value. Will mate to produce winners if desired.

The "Ringlets" are known in every land and play their part in the commerce of the world

"Ringlet" Eggs Are The Best That Money Can Buy; They Produce Prize Winners

Mr. E. B. Thompson

Dear Sir:—Thinking it would be of some pleasure to you to know of my winnings on your "Ringlets" at our show, I will state that I won first prize on cock, hen, cockerel and pullet, and special for best cock, any variety, and special prize for best hen, any variety, in the show. The "Ringlets" win wherever shown. This was my first exhibit and my birds were the sensation of the show. Yours truly, W. J. Brown, M. D.

Dover, Ark., October 18, 1909.

My matings for eggs are the world's finest, and prices are as usual: One setting, \$6; two settings, \$11; three settings, \$15; four settings, \$18; 100 eggs, \$30. New 58-page catalogue, full of pictures of New York winners from life, will be mailed upon application.

414 Howard Street

Melrose, Mass.

Pullets (16)—First, an outstanding winner. Second, another bird of exceptional quality. The third, similar to the first prize bird, a Fred W. Cobb product. Fourth, fifth and sixth fit to win in most any other competition.

Pens—First pen of chicks went to Mr. Fred W. Cobb, Newton Upper Falls, Mass., on four females which it would be hard to choose between, headed by a rich, Golden Buff cockerel that will improve with age. Second, to Messrs. Lunt & Curtis, Freeport, Me., on another high quality pen.

Silver Penciled Partridge and Columbian Rocks.

Small classes, but many birds of merit were shown in them.

Silver Laced Wyandottes.

Cocks (7)—A strong class.

Hens—Another strong class, the prizes being divided between Mr. J. C. Jordey and Messrs. Wood & Freeman.

Cockerels—Brought out twelve of the best of this variety that we have yet seen. The open lacing on the breasts and the wings of the winners show wonderful improvement over the birds exhibited in former years. The win of Mr. R. C. Williams, Barre, Mass., a comparatively unknown breeder, was well merited.

Pullets (11)—It must have been hard for the judge to decide between the first, second and third winners in this class; in fact, any of the birds outside the winners are fit to wear the blue. The class as a whole we believe to be the best ever brought together in the east.

Pen—First, J. Frank Van Alstyne, Niverville, N. Y.

White Wyandottes.

Cocks (22)—A hot class. First, a grand bird all over. Second, Owen Farms, one of the best cock birds ever shown. Fine in comb, eye, color of legs, absolutely pure white and a Wyandotte in shape. Shown in pink of condition. Third cock went to Mr. John S. Martin, a winner in almost any show outside of New York and Boston. Fourth also goes to Mr. Martin on a good bird, not quite so good in head as third. Fifth and sixth both birds of exceptional merit.

Hens—Brought out a class of twenty-two. First and special for best shape and color went to Owen Farms, and one of the best Wyandotte hens ever bred. Second and fifth also to Owen Farms, the second hen of the very highest quality. Third, a good one, but not so good in comb and finish as first and second. Fourth, to Martin, not in best of condition. Fifth, to Mr. John W. Andrews, a nice hen, with a better comb might have gone higher.

Cockerels (42)—One of the hottest classes that ever faced a judge. First, second and sixth owned by Mr. John W. Andrews. The first prize cockerel was the shape special winner and a grand bird. Mr. Andrews showed six of the best cockerels that we ever saw exhibited by one breeder. Third went to Owen Farms, on another good win. Fourth, a nice bird, a little high on legs. Fifth, a Martin bird of the best of quality.

Pullets (32)—Here again Owen Farms wins the blue on a beautiful pullet, a gem all over, and conceded to be an easy winner in the class. Fifth also went to Owen Farms. Second, a gem, owned by Mr. John S. Martin, fit to

It is AN ENCYCLOPEDIA OF CHICKENOM, and no one can well afford to be without it. Will be mailed to anyone upon receipt of only 15c. Money refunded if not pleased.

C. C. SHOEMAKER
BOX 605 FREEPORT, ILL.

win the blue in any exhibition. Sixth, a nice bird, but not shown in the best of condition.

Pens—Owen Farms again was the winner of the blue in pens of fowls, followed by six other splendid pens. This is, we believe, the largest outfit ever shown in Boston.

Chicks—First and fourth went to Mr. John S. Martin. Second, Owen Farms, the first prize pen being acknowledged by White Wyandotte judges to be the peer of anything yet shown in Boston.

Golden Wyandottes.

Cocks—To give the reader something of an idea of the quality in this class, six of the eight birds exhibited were awarded premiums.

Hens (11)—Little to choose in this class among the winners, the shape special going to the three prize hens owned by Mr. Loren H. Brown, Lunenburg, Mass.

Cockerels (9)—Here again in recognition of the quality shown, the judge awarded premiums to all but two in the class.

Pullets (13)—The first, third, fourth and fifth, going to Mr. Loren H. Brown, was undoubtedly one of the best wins yet made in this class by one breeder. The second class pullet of Messrs. Wood & Freeman was the only thing to mar a clean sweep.

Pens—First pen also goes to Mr. Brown.

Black Wyandottes.

Black Wyandotte classes contained but a single bird in each class, but of splendid quality; shown by Mr. Howard Grant of Marshall, Mich.

Buff Wyandottes.

Cocks (10)—First, second and sixth, owned by Messrs. Mattison & Toel, South Shaftsbury, Vt., had the Mattison quality all over. This firm seems to be able to show year after year birds of a little better quality than those exhibited by them the preceding one. Third, fourth and fifth all splendid birds.

Hens—Brought out a class of thirteen. Here again Messrs. Mattison & Toel were the big winners, first, second, fourth and sixth going to them on four entries. The balance of the class should not be considered of meagre quality, as they were first-class specimens in every respect.

Cockerels (12)—First, fourth and fifth, Messrs. Mattison & Toel. To give the reader some idea of the quality of the first prize cockerel, there were eleven special prizes awarded on this bird alone. Second, to Mr. John S. Dunn, a winner in almost any class. Third and sixth were fit to win the blue in almost any other competition.

Pullets (16)—First, second, third and fourth, Messrs. Mattison & Toel, on four entries. It was the same here as in the other classes, the birds that were placed lower being fit to win but for such strong competition.

Pens—First pen of fowls, Messrs. Mattison & Toel.

Chicks—Here again Messrs. Mattison & Toel practically swept the boards by winning first, second and third on three entries. Fourth and fifth went to Messrs. King and Whitney, Plainville, Mass., on strictly high quality pens.

Partridge Wyandottes.

Cocks (7)—This class contained the best lot of old birds of this variety the writer has yet seen, the first, second and third prize birds being so close in quality that it was hard to choose among them the winner.

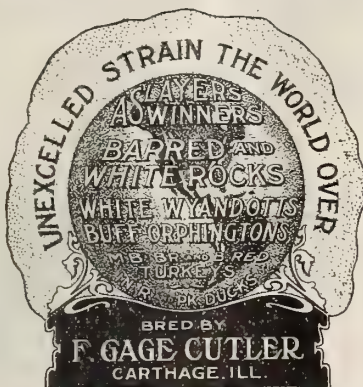

Hens (11)—Another splendid class showing much improvement over the quality heretofore shown. The judge found more quality than he had ribbons to go round; as it was, he had to add several specials for extra merit.

Cockerels—Brought out a class of nineteen birds, a grand lot. First went to Mr. W. H. Coffin, Whitsinville, Mass. Fifth to Mr. Horace Havemeyer, Stanford, Conn., on the best lot of cockerels of this variety, we believe, yet shown.

Pullets—Here again the prizes were divided between Coffin and Havemeyer.

Fowls—First, Mr. Coffin. Second, Mr. Kendall. Third, Mr. Fletcher.

Chicks—Mr. Coffin, first. Second, Mr. Havemeyer. Third, Mrs. S. G. Job.

BOURBON REDS—A few fine toms, \$7; hens, \$5. EGGS, \$50c, \$1 and \$1.25 each, from my New York and Missouri State Show winners. Eggs about half price after April 20th, when we have set about all we want ourselves. Bourbon Red eggs, \$4 and \$6 per setting.

DUCKS—Pekin, Indian Runner and Colored Muscovy. Stock and eggs, \$1.50, \$2 and \$3 each. Bred on two 80-acre farms.

Send for fine free catalogue. A stamp is always appreciated, but not required. Send order direct or write your wants. We will trust you and guarantee satisfaction, as we have found that our cheapest way to advertise is to please our customers and not spend hundreds of dollars advertising with a lot of papers.

CARTHAGE, ILLINOIS

CHEAP OFFERS

EGGS—25 per cent off on orders received and half paid in February, so we will have an idea how much breeding stock to keep. We begin shipping February 15th. Our regular prices are much cheaper than others of same quality of stock.

STOCK—Cheap to close out so we will have all our room for mating up our pens.

OUR PRICES—Are half to half what others are as we advertise only in a few papers to give our customers the benefit of hundreds of dollars saved as we have found that "a pleased customer is our best advertisement."

WHITE ROCKS—Females, nice utility, \$2 and \$2.50. Score 98 to 94, \$3; 94 to 95, \$5; 95 to 96, \$8 each. Fine cocks and cockerels, \$2, \$3, \$5, \$7.50, \$10, \$12.50, \$15, \$20 and \$25. Many ask three to six times for same quality. EGGS—\$15, formerly \$20, from \$1,000 cock bird and hens scoring 96 to 96½. No finer mating anywhere. \$10, from my cock bird, "unexcelled," and 95½ to 96 point hens, a wonderful mating, \$7.50, from "Snow King," value \$500, and hens 95½ to 96. \$5, eggs from mating like many ask \$10 and \$15 per 15. \$2 and \$3 per 15, from fine females, and cockerels I am keeping for fine show cocks. We have the greatest laying strain we know of, records to 263 eggs per year.

WHITE WYANDOTTES—STOCK, the same fine quality and prices as our White Rocks. EGGS, from same quality of stock as our White Rocks. Send for fine catalogue giving our winnings.

BARRED ROCKS—STOCK, we have lots of stock from our great laying strain, fine utility and show birds, \$2, \$3, \$5, \$7.50, \$10, \$12.50 and \$15. EGGS, \$2, \$3, \$5 and \$8 per 15, from stock, like many others would ask much higher for. A fine catalogue free telling all about our great Barred Rocks.

BUFF ORPINGTONS—Nice birds, \$1.50, \$2, \$3, \$5, \$7.50 and \$10. Only a few pens, but they are fine, great layers and winners. Send for our catalogue. EGGS, \$1.25, \$2, \$3 and \$5 per 15.

BRONZE TURKEYS—Fine young toms from our Madison Square Garden winning tom. Also won at Mo. State Show, \$3, \$10 and \$12.50. Hens, \$5. You need one of our wonderful fine toms to head your flock. One fine yearling tom, \$10.

One fine yearling tom, \$10. Hens, \$5. EGGS, \$50c, \$1 and \$1.25 each, from my New York and Missouri State Show winners. Eggs about half price after April 20th, when we have set about all we want ourselves. Bourbon Red eggs, \$4 and \$6 per setting.

DUCKS—Pekin, Indian Runner and Colored Muscovy. Stock and eggs, \$1.50, \$2 and \$3 each. Bred on two 80-acre farms.

Send for fine free catalogue. A stamp is always appreciated, but not required. Send order direct or write your wants. We will trust you and guarantee satisfaction, as we have found that our cheapest way to advertise is to please our customers and not spend hundreds of dollars advertising with a lot of papers.

Des Moines Incubator Co.
244 Third Street, Des Moines, Iowa

Silver Penciled Wyandottes.

Cocks—First, second and fifth, Mr. A. L. Hathaway, Abington, Mass. The first and second birds certainly were gems of the first magnitude, closely followed by fourth and sixth.

Hens (11)—First, Mr. Hathaway, on a beautiful penciled bird. Second, Mr. J. E. Morse, Taunton, Mass., third and fourth going to Mr. C. H. Pope, Brockton, Mass., all high-class specimens.

Cockerels (8)—First, second and third to Mr. Hathaway. Fifth, Mr. Morse. Fourth, Mr. G. W. Felton, Cliftondale, Mass.

Pullets—First, third and fourth, Messrs. Rogers and Packard. Second, Mr. Hathaway. Fifth, Mr. Felton.

Columbian Wyandottes.

Cocks (13)—First and fourth, Mr. Keating. Second, Mr. A. C. Hawkins, Lancaster, Mass. Third, Sunnybrook Farm. Fifth, Mr. Fred W. Cobb. The second, fourth and fifth prize birds were exceptionally classy specimens.

Hens (19)—First, Mr. A. C. Hawkins, and one of the best Columbians we have seen to date. Second, Sunnybrook Farm, another winner in almost any competition. Third, fourth and fifth, all good birds.

Cockerels (30)—We believe this class to be as good a lot of Columbian cockerels as was ever shown. First, Mr. Keating. Second, Mr. Charles W. Pratt, North Abington, Mass., on one of the best Columbian cockerels yet brought out. Third, to Mr. Hawkins, another good win. Fourth, fifth and sixth close up.

Pullets (25)—First, Sunnybrook Farm. Second, Mr. Eastman. Third, Mr. E. J. Robinson, on a beautiful trio of birds. Fourth and fifth, also all high quality.

Fowls, Pens—There were five pens of fowls and twenty pens of chicks, the first prize pen of Mr. A. C. Hawkins being considered the best pen yet brought out. This was undoubtedly the best exhibit of Columbians out this winter. The fifth prize pen of Mr. J. Frank Van Alstyne, Niverville, N. Y., was of exceptional quality and attracted considerable attention.

Single Comb Rhode Island Reds.

Cocks (20)—Birds that could win in almost any other show were among the unplaced here. First, good in comb, eye, color of legs, and shape. Might have been a little better in color of hackle. A good win. Second prize bird crowds the winner. Third, fourth and sixth all birds of quality.

Hens—Brought out a class of twenty. First, nice, even, dark-colored bird of the correct type. Second, another grand hen, not quite so good in color. Third and fourth well shaped, large-bodied hens. Fifth and sixth well placed.

Cockerels—Brought out a class of forty. First, Mr. Albert C. Chapin, Springfield, Mass. A bird of exceptional merit and good all over. Second, Mrs. M. L. Cobine, Oneonta, N. Y., crowds the winner. Third, Mr. F. A. Garripy, Stillwater, R. I., fit to win first in almost any other competition. Fourth, another grand, good win. Fifth and sixth well placed.

Pullets (32)—First, a gem, owned by Mr. Albert C. Chapin, Springfield, Mass. This pullet also won the Club Shape Special. Second, Pearson. Third prize pullet was one of the best seen

15⁹⁵ The AMERICAN SEPARATOR

Leads the World

THIS OFFER IS NO CATCH. It is a solid, fair and square proposition to furnish a brand new, well made and well finished cream separator complete, subject to a long trial and fully guaranteed, for \$15.95. It is different from anything that has ever before been offered. Shrink 1 quart of milk a minute, hot or cold, makes thick or thin cream and does it just as well as any higher priced machine. Suitable for small dairy, hotel, restaurant and private families. Any boy or girl can run it sitting down. The crank is only 5 inches long. Just think of that! The bowl is a sanitary marvel; easily cleaned and embodies all our latest improvements. Gears run in anti-friction bearings and thoroughly protected. Before you decide on a cream separator of any capacity whatever, obtain our \$15.95 proposition. Our liberal long time trial and generous terms of purchase will astonish you. Our own (manufacturer's) guarantee protects you on every American Separator. We ship immediately. Western orders filled from Western points. Write us and get our great offer and handsome free catalog. ADDRESS, Box 1153, AMERICAN SEPARATOR CO., BAINBRIDGE, N.Y.

FENCE Strongest Made

Made of High Carbon Double Strength Coiled Wire. Heavily Galvanized to prevent rust. Have no agents. Sell at factory prices on 30 days' free trial. We pay all freight. 37 heights of farm and poultry fence. Catalog Free.

COILED SPRING FENCE CO.
Box 82 Winchester, Indiana.

Ideal Aluminum

LEG BANDS for Poultry and Pigeons are the acknowledged leaders. Firmest and most secure lock. Guaranteed to stay on. Price, post-paid, 12 for 15c; 25-25c; 50-40c; 100-75c. All supply dealers sell them. Sample band and my price list mailed for 2c stamp.

Frank Myers, Mfr., Box 40, Freeport, Ill.

Cut Clover Brings Eggs

Make the most out of your hens. Fine cut clover, alfalfa and other green stuff give best cold weather results. The easy-running

"New Model" Cutter cuts into 1/4-in. lengths. Removable steel knives, adjustable, easily sharpened. Cuts fast and fine. It's always in order; nothing about it to break. Write for circular and free sample of cut alfalfa.

Poultry Herald Dept. C, St. Paul, Minn.

this year. Fourth, to Mr. E. E. Ward, Marlborough, N. H., another good win. Fifth, to Mr. Frank D. Reed, well placed.

Pens—Here again was quality galore. First, a good win, well placed. Second, Mr. Pearson. Third, fourth, fifth and sixth all close up. There has certainly been wonderful improvement in this breed the past year.

Rose Comb Rhode Island Reds.

Cocks (7)—First, Mr. Robert C. Tuttle, Hartford, Conn., a good win. Second, Mrs. Cobine, on another high quality bird. Third, fourth and fifth well placed.

Hens (8)—First, fifth and sixth, Mr. Tuttle, on four entries. Second, Mr. W. B. Irving, close up to the winner. Third and fourth well placed.

Cockerels (16)—First, Mr. Bean, a good win. Second and fifth, Mr. Tuttle; second crowds the winner. Third, fourth, fifth and sixth all birds of high quality.

Pullets (16)—First, Mr. Bean. Second and sixth, Mr. Tuttle, on three grand, good birds. Third, Mr. John E. Davis, needs a little more time.

Pens—First, Mr. Tuttle on one of the best pens we have yet seen exhibited. Second, third and fourth, close up.

One of the largest exhibits of Buckeyes we have seen was brought out at Boston. List of awards will show the winners.

Single Comb Buff Orpingtons.

Cocks (10)—First, even colored, extra low down bird, good comb, eye and shape, awarded the Shape and Color Special in his class. We considered it a good win. Mrs. Hooker is to be con-

gratulated. Second, Owen Farms, a bird of great depth of body, fine in comb, eye, leg color, not quite so fine in surface as winner. Third, Mrs. Hooker, wins again on a bird very similar in type to the first but not shown in quite as good condition. Fourth, one of the best colored birds in the class, not quite as large as the first, second or third winners; low down, and we understand this bird is the son of the fourth prize cockerel. Fifth goes to Mr. Henry B. Prescott, Derry Village, N. H., on the lowest bird in the class. Had this bird shown a bright fine color, he would have gone higher.

Hens brought out a class of fifteen. First and fourth, Owen Farms, a grand hen all over; a good win, showing the rich, even buff from head to tail and a low down type so much desired and rarely seen in the Buff Orpingtons yet. Second, third and sixth to Mrs. Hooker, second prize hen, closely following the winner. The third, also an exceptionally good hen, might have done better but for poor comb. Fifth to Mr. H. E. Clarke, of South Danville, N. H., on one of the best colored hens in the class.

Cockerels (14)—First and second, Owen Farms, the first prize cockerel an outstanding winner in this class. Second, another good bird, but fails as winner in color and comb. Third, a fine colored bird. Fourth goes to Mr. Challis on a bird of exceptional depth of body and of rare good color. This bird might have gone higher. Fifth to Mrs. Hooker, on a very typical even colored bird, good comb and eye. This bird when it reaches its maturity and holds the quality shown today, will be a bird that the other breeders will have

to reckon with. Sixth, a nice bird but hardly the quality of the birds ahead.

Pullets (14)—First, an outstanding winner in its class. Was also awarded the Shape and Color Specials. Second, third and fourth, Owen Farms, second, the most even colored pullet in the class, a bird of rare quality. Third, a low down blocky bird but hardly the quality of the first and second. Fifth, a nice even colored bird, good shape, good colored leg, might have been in better condition.

Pens (6)—This is one of the hottest classes ever shown in Boston. First, another Owen Farms win, on four females, of even type and color, headed by a rich golden buff male of rare depth of body. Second goes to Mr. Challis on a pen of rare quality. It must have bothered the judge to decide among these two pens. Third, to Mr. J. A. Shephan & Son, Ashland, Mass., on another good pen of exceptional merit. Fourth to Mr. Henry Prescott, on another pen of good quality but, at the time of the judging, one of the hens in this pen was sick and certainly could not do justice to her mates. We consider this pen one of the best we have ever seen. Sixth to Mr. J. H. Carey, Glastonbury, Conn., a nice pen.

Single Comb Blacks brought out a class of eleven of the best black males we have yet seen. First, goes to Dr. Knapp, on a grand bird, low down in shape and of exceptional color. Second, was the Shape Special winner, one of the grandest Orpingtons in type we have yet seen. Third, another very rich colored bird. Fourth, a grand bird in type, absolutely free from purple, might have gone higher.

Hens brought out a class of ten.

A THING OF BEAUTY AND JOY FOREVER NOFTZGER'S PARTRIDGE ROCKS

Can you imagine this most beautiful bird with its feathers most beautifully and delicately penciled with dark brown on a mahogany brown, making a rich chestnut coloring effect with a beautiful sheen that shines like satin? If you can imagine this, then you know how beautiful they are, and then you will want to go to the originator of this breed to secure further information. He breeds the best there is, as is proven by the fact that he

Won Again at the Big Chicago Shows

all first and second prizes, also 3 thirds and 3 fourths. He not only has a few good birds but hundreds of them, and he has less culls and more show specimens than are found in the average flock of thoroughbreds. To this fact many can testify. Judge Zimmer and others have remarked about this fact in visiting his yards. Remember this, also the fact that they are great layers, docile, easily confined and embody all the good qualities of any other variety of the Rock family, and we think you will decide you want **PARTRIDGE ROCKS**. Naturally you will want stock from the originator. He is just issuing a handsome illustrated book telling all about these fine birds, giving history, etc., which will be sent for only 10 cents. Hundreds of birds for sale. Mated trios and pens. Write for prices.

S. A. Noftzger, North Manchester, Ind.

EGGS **Columbian Wyandottes** EGGS

Hewitt's Bred to Lay Strain of Large Brown Eggs—Prizes won at St. Louis, Pittsburg, Washington, D. C., Altoona, etc. This breed is thrifty, hardy, matures early, winter layers. Beautiful, profitable. I guarantee to please you or money refunded. Eggs, \$3.00 and \$5.00 per fifteen.

E. C. Allison : Edinburg, Indiana

THE WORLD'S CHAMPION PEN OF WHITE ORPINGTONS

Defeating the famous Kellerstrass, Cook and Sunswick entries at the Madison Square Show, 1910. Extract of catalogue of show:

3rd—3116	Wm. Cook & Sons	4th—3120	Ernest Kellerstrass
5th—3117	Wm. Cook & Sons	3121	Sunswick Poultry Farm
3118	Harold Purvis	1st—3122	Fred Harries
2d—3119	Ernest Kellerstrass	6th—3123	Elm Poultry Yards

Extract from New York Sun, December 31, 1910. In the exhibition yards of Orpingtons a notable victory for home bred was in the white variety, Fred Harries of Lakewood Farms winning the honors. A limited number of eggs will be sold at ten dollars per setting. Buy from American bred birds and buy from the man who raises winners.

Fred Harries :: "Fernlea" :: Elmsford, New York

Manager Supply Department Lakewood Farms. Member of American White Orpington Club American Orpington Club. Breeder of Orpingtons for over twelve years. Winner of more than three hundred firsts, specials and silver cups. :: :: :: :: ::

First, Messrs. Mathews, Armstrong & Co., who won the Shape Special on a grand large bird of exceptionally fine color, low down in type. Second, close up. Third, Dr. Knapp, must have crowded the winners closely. Fourth, a grand good hen out of condition. Fifth, a hen of exceptional quality, exceptionally strong in color, comb a trifle too high. Sixth, Mr. J. S. Haupt, on a grand hen that we like very much. In type, color and head points, one of the best we have yet seen.

Cockerels (14)—First, second and third, Owen Farms, on three of the most finely balanced cockerels yet shown. Fourth goes to Mr. Henry B. Prescott on another extra good one. Fifth to Dr. Knapp. Sixth to Mr. Tyler Crittenden, on a bird of extra high quality. This bird's condition, we believe, put him back.

Pullets (11)—First, second, third, fourth and sixth go to Owen Farms; enough said. Fifth, a nice bird but hardly the quality of the winners.

Pens, Old (3)—First, Elm Poultry Yards, also winners of the silver cup for the best pen of Orpingtons in the show, all varieties competing. Second to Dr. Knapp, on an extra quality pen.

Pens, Chicks (3)—First, Owen Farms, on a pen of rare quality. Second, Mr. Tyler Crittenden, another grand good pen.

Single Comb Whites.

Cocks (12)—First, Owen Farms, a bird of rare quality, depth of body and color, an easy win. Second, Mr. D. Doeher, on a first class bird, but not the depth of body or the rare coloring of the winner. The balance of the class all birds of rare merit.

Hens (10)—First and third, Owen Farms, the winner, being the best White Orpington hen, we believe, yet shown. Second, Mr. B. E. Darling, on a large low down hen of splendid quality. The balance of the class showed much merit.

Cockerels brought out a class of thirteen. First, Owen Farms, was also the Shape and Color winner, and the best bird we have yet seen in White Orpington males, being absolutely pure white in color and great depth of body; an easy win. Second, third, fourth, fifth and sixth, all birds of extra quality, but not that rare finish and depth of body shown by the first and second winners.

Pullets (26)—Here was another Owen Farms win. First, second, fourth and fifth went to them. The first prize pullet, "Harriet," valued at \$10,000, is undoubtedly the best White Orpington female yet shown. She was the winner of the Shape and Color Specials, and so many other ribbons decorated her coop that it is impossible for us in this brief writeup to give them all. She was the center of attraction among the Orpingtons and richly deserved to be. Second, another high quality bird of the low down type, that we are familiar with in the black variety but seldom seen among the whites. The balance of the class showed a lot of quality.

Pens—First, Owen Farms, on birds of the same quality as shown in the open classes. Second and third, fit to win the blue in almost any other competition. The display of Rose Comb and other varieties of Orpingtons contained many birds of the very highest quality.

Single Comb Leghorns—Brown.

Cocks (2)—We were unable to get the awards in this class as no ribbons

were up, and the catalogue shows no prizes being given.

Hens (3)—First, good in comb, eye, shape and color; color of legs, a rich yellow; a good win. Second and third well placed, close up to the winner.

Cockerels (6)—First, Color Special winner, a bird of nice type. Second, owned by Mr. Waldo Kennard, won the Special for best shape in class, fine in lobe, comb and stripe, well up on legs; must have crowded the winner. Third, fourth and fifth well placed.

Pullets brought out a class of eleven. First, Special for best shape and color, goes to a neat, trim, well balanced bird. Second, another of the highest quality. Third, looks to us like a winner, but the judge must have found something to put her down so low. Fourth, fifth and sixth well placed.

Rose Comb Browns.

First, Shape Special winner, a very neat, trim bird with good head points, and distinct striping. Third, fourth and fifth, winners, all owned by Mrs. George B. Inches, North Grafton, Mass. Second, owned by the Gale Poultry Place, New Haven, Conn., the best colored bird in the class, and not only won the Club Specials for best shape and colored male but the Association Special for best color.

Hens (9)—First, second, third and fourth went to Gale Poultry Place, on four grand birds. Fifth and sixth to Mrs. Inches.

Cockerels (11)—First, a grand good bird, good color, well up on legs, closely followed by the second bird of the same type. Third, high quality specimen shown by Gale Poultry Place. Fourth and sixth well placed.

Pullets (9)—Brought out a class of the best Rose Comb birds we have seen for a long time, the prizes being divided between Gale Poultry Place and Mrs. George B. Inches, the former winning first, second, third and fourth on birds of the best of quality and closely followed by the latter, winning fifth and sixth.

Single Comb Whites.

Cocks (8)—Here was quality galore. First, fourth and fifth goes to Pine Top Poultry Farm, Hartwood, N. Y., on three strictly high class males. The first prize cock is the winner of nine Specials in this class. He is strictly one of the best high quality males we have yet seen. Second, another bird of quality, good all over, followed closely by the third prize male of Elm Poultry Yards, Hartford, Conn. Fourth and fifth show same type and quality as the winners of the class.

Hens (7)—Here again Pine Top wins the blue, also second and fourth. The first prize hen showed almost ideal in every section. Second, another of the same type. Third, another from Elm Poultry Yards, close up to the winners. Fifth well placed.

Cockerels brought out a class of twelve, all shown in the pink of condition and all fit to win the blue in most any other competition. Here again Pine Top wins first, third and fourth, the first prize cockerel being awarded Special medal for the best male in the Mediterranean class, also the Association Special for best shape and color. Second goes to Elm Poultry Yards, on a cock bird of splendid quality, absolutely pure white in color but not quite as rich in leg color as the winner, nevertheless a strictly high class bird.

Planet Jr.

Get bigger profits from your farm and garden

Planet Jr Tools are the greatest crop-producing helps you can have on your farm or in your garden. They often do the work of six men—effect a saving of time, labor, and money from the start, and do such thorough cultivation that you get an increased yield.

Planet Jr Implements are the strongest and last the longest of any implements made. They were designed by a practical farmer who studied his own garden needs, and used his skill and energy to supply them. His neighbors' needs proved just as great, and now he makes Planet Jr Tools for over two million farmers and gardeners. Every Planet Jr is fully guaranteed.

No. 6 The newest Planet Jr Combination Hill and Drill Seeder, Wheel Hoe, Cultivator and Plow, opens the furrow, sows any kind of garden seed accurately in drills or hills, covers, rolls down, and marks out the next row—all at one operation. Also a perfect Wheel-Hoe, Cultivator and Plow.

No. 12 Planet Jr Double Wheel-Hoe, Cultivator and Plow, is the handiest implement ever made for truckers and gardeners. All cultivating parts are of high-carbon steel to keep keen edge. Specially designed to work extremely close to plants without injury. Does away with hand-weeding.

New Catalogue Free The 1910 illustrated Planet Jr Catalogue must be seen by every farmer and gardener who wants to "keep up with the times."

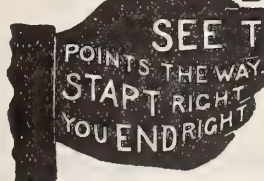

Its 56 pages describe 55 Planet Jr implements—a tool for every kind of farm and garden cultivation. It is absolutely free if you fill out the coupon, cut off, and enclose in envelope or paste on postal, and mail it to us. Don't miss it.

THOMAS' WHITE ROCKS

Win at Akron Show, 1910. Second cockerel, first and second pullet, second and 3d cockerel and first pen. My first pen was pronounced by judge to be best pen in show. Also won special for best display. Write for prices on eggs from select matings of line bred, trap nested stock.

James R. Thomas : East Akron, Ohio

Bateman's Black Langshans

WORLD FAMOUS WINNERS—At the late Chicago show they won a large majority of prizes and every special on males. They have won more premiums at Chicago in the last ten years than any other strain. If you are looking for quality in stock or eggs, I have it. Write me for prices.

JESSE T. BATEMAN : BOX A : WAVERLY, ILLINOIS

S. C. BUFF ORPINGTONS

Winners of 1st cock, 1st hen, 1st cockerel, 1st pullet and 3d pen, cup and display at the great Missouri State show, St. Louis, December, 1909. Also four out of a possible five firsts, Ill. State Fair, 1909. Booking egg orders.

L. H. Eldridge - Box A, Bradford, Illinois

The balance of the class was well placed.

Pullets (6)—First, third and fourth goes to Pine Top, the winner, being one of the neatest, well placed pullets we have seen this year. She was also the winner of the Association Specials for best color and shape and the National Single Comb White Leghorn Club Specials for best colored female, best shape female, best headed female and best female shown by a club member. Second to Elm Poultry Yards, on another grand pullet of the same type and quality. Third, a good one, closely followed by fourth. The balance of the class were fit to win in almost any other competition.

Pens—First, Pine Top, closely followed by Elm Poultry Yards. The class as a whole is one of the best out this year, and a pleasant feature of the exhibit was the decorations of the Pine Top cages of sprigs of pine.

Single Comb Buffs.

Cocks (5)—First, a nice soft, even colored bird, good head, good shape; owned by Mr. L. M. Rancor, Tiffin, Ohio; a good win. Second and fourth not so good in head and color as winner. Third, a bird of splendid quality, but seemed to be out of condition, otherwise might have gone higher. Fifth, owned by Mr. Peter S. Hurt, Thorntown, Ind., a good even colored bird, but due to his comb being frozen did not show at his best.

Hens (9)—First and second, both hens of high quality. Third, owned by Mr. M. C. Swartout, Groton, N. Y., we like very much, being a bird of rich golden color and of good size. The balance of the class well placed.

Cockerels brought out a class of ten. This was a quality class of the Buff Leghorns exhibited, first going to Mr. E. Jeffries, Toronto, Canada, on one of the best cockerels we have seen this year. He was also the winner of the Association Special for best shape and color. Second, another rich golden buff bird, not so high on legs as winner. Third, a bird of nice type, only a trifle coarse in head. Fourth, a very rich fine even colored bird, too coarse in comb. Fifth, one of the best colored birds in the class. Sixth, another fine colored bird, nice lobes and color of legs, not showing any sickles.

Pullets (14)—First again goes to Mr. Jeffries in this class, on a very neat fine colored bird; a good win. Second, another nice bird, not so good in color of tail. Third, of the same type, but fails in tail and color of legs. Fourth, a nice shaped bird, well up on legs, trifle dark in color. Fifth, even colored, one of the best shaped birds in the class, trifle coarse in comb.

Pens—We were sorry to see but one pen of this beautiful variety exhibited at Boston, although it contained birds of splendid quality. The exhibit as a whole is one of the best seen this year, the chief criticism being many of the birds carried too heavy combs.

Minorcas—Single Comb Black.

Cocks—First and second to Mr. T. A. Faulds, London, Ontario, the first bird winning the Shape Special.

Hens—Here again first, second, third and fourth went to Mr. Foulds, on birds of the very highest quality. They were indeed four grand birds to be shown by one exhibitor.

Cockerels—First, second and third to Foulds, a very fine strictly high class quality.

RICKEY'S WHITE ROCKS

The kind that win. Some choice show and breeding cockerels for sale. Write for prices and full particulars. I am now booking orders for eggs for hatching from my prize pens. Pen one headed by first prize cock and special prize at the big Missouri State Fair for best cock in show room and contains first prize pullet Missouri State Show and also second prize pullet at the State Fair. Pen two headed by first prize cockerel at Missouri State Fair. Give me a trial. I guarantee satisfaction. Send for catalogue. It is free.

First Pen Cockerel of Cleveland, 1909

COVERT'S

Narrow sharp barred fellows won in the great Coliseum show at Chicago, December, 1909, in competition with 239 birds in class, 2d hen, 3d cockerel, 3d pullet and 2d pen. Shape special on male. At Cleveland, 1909, won four regulars and color special on female on five entries. Choice breeding cockerels, pairs, trios and pens, also pullets that will breed prize winners at popular prices. Satisfaction guaranteed.

COVERT'S BARRED ROCK FARM
WILLOUGHBY : OHIO

Pullets—First, second, third and fourth to Foulds. These four pullets, like the balance of the winners of this variety, were of the best of quality.

Rose Comb Blacks.

Cocks—First, Mr. B. J. Mountjoy, London, Ontario, Canada, on one of the best birds of this variety we have ever seen shown. Second, third and fourth, Foulds, good in shape and color, but not so large as winner.

Hens—First and third to Foulds. Second to Mr. H. H. Bailey.

Cockerels (9)—This was a splendid class. First, second and fourth went to Foulds. The first prize cockerel was awarded the Association Special. Third and fifth to Mr. Calvin H. Lee, Hyde Park, Mass., not quite so large as first and second.

Pullets brought out a class of ten of the best of this variety we have yet seen. First, on a large rangy bird, absolutely free from foreign color, fine in head points and well up on legs. Second, third, fourth and fifth to Foulds, all well placed.

Pens—We were sorry to see that there was but one pen shown in this variety, but they were good enough to stand the strongest competition.

SPECIAL REPORT ON BARRED PLYMOUTH ROCKS AT BOSTON SHOW.

By Judge Chas. H. Wells.

Barred Plymouth Rocks.

Another Boston show is past and one that marks an epoch in Barred Rock history. It was a battle royal of classic quality among the veteran fanciers and of surprises brought out by the younger breeders no less marked; also the strongest, and best class as a whole that I have ever seen at Boston.

The breeders who were fortunate to attend will need to strive with renewed efforts to keep up with the pace set at this show. First cock was one of those large well-finished birds that always attracts attention, with good head, comb, length of back and that go to make the good Barred Rock type. Second, a grand type of bird with surface and under barring that would make all sidestep, but put back for absence of secondaries. Third, fourth and fifth were exceptional good birds, but perhaps lacked a little in show condition to first and second.

Hens—Here was the most interesting class of the four, showing three distinct types of barring, and in all of them quality of high degree, making it harder to place the awards. First—A fine large hen, very sharp and narrow in barring, an easy winner. Second—A finely barred bird that ran a little too dark on head, very clean cut in barring and a choice specimen. Third—A little small, but nicely barred and laced in all sections; of that soft dark blue color pleasing to the eye. Fourth and fifth were large hens of the same type, barring and lacing, but perhaps not quite as closely barred. However, very "classy," and the owners may well be proud of them. There were ten or twelve more in this class deserving of mention which could not be placed.

Cockerels a large class. The first a bird of fine station, strongly barred in all sections, like the first hen, also an easy winner. Second a little short in back, but outside of this little fault could be found with him. Was one of the blue ones. Third fine in station and

BUFF AND BLACK ORPINGTONS

 Tiro - - - - - Ohio

surface, but not as well under barred as first and second. Fourth, fifth and sixth—Fine blue barred birds that would do credit to any breeder.

Pullets—First—So very fine and ringy in barring that it put her in a class by herself, but lacking a little in shape. Second—Fine in shape and an easy winner. Third—A little immature, but one of the blue variety that stop you and demand your attention. Fourth—Cut out for a very large bird, but not as well finished yet, showing great quality. Fifth and sixth—Fine pullets, close to the fourth.

Pens (old)—First—Good quality throughout. Second—Extremely close to the winners, but male looked as he had been over shown.

Pen (young)—First—Remarkably good, and it seemed that nature and the artist who selected them had done their best. Second—A fine pen, but male lacking in finish. Third—A grand lot of females, but male not as good in under barring.

GAME BANTAMS AT BOSTON SHOW.

By James Glasgow.

While the display of game bantams was not large in numbers there were many individual specimens that fairly teemed with quality. A number of New York winners were in evidence and carried off the highest honors.

Black Red cocks were good all through, and outside of the winner the others were a very evenly matched lot and could easily have changed places on the list of honors. Black Red hens, the winner at New York, looking very fit, and stands out. Second, third and fourth birds grand in quality. Black Red Cockerels—Cockerels first, also a New York winner, looking his best and wins second; close up; lacks the get-up of first, third and fourth birds, that could win anywhere. Black Red Pullets—First a gem of the first water, one of the best we ever saw. Second another good one; lacks the finish and hardness of feather to the winner. Balance very good quality. Brown Reds—Few, but good. Silver Ducklings—Fit to win anywhere. Golden, winning cock, stood out.

Pyles brought out a sensation in the cockerel class, the first prize bird being a perfect model with a ground color as white as snow.

Birchens grand in quality, with one or two exceptions.

Whites have made great strides, and in our opinion are pushing the other varieties close.

Blacks and A. C. V. a very mediocre lot, and leave room for great improvement to enable them to find a place in a first-class show.

AN INTERESTING STORY OF THE UNEQUALED RECORD OF WINNINGS MADE BY OWEN FARMS, VINEYARD HAVEN, MASS.

The record of winnings made by the Owen Farms at the late New York and Boston shows has, we believe, never been equaled in the annals of poultry history, and it is indeed a wonderful record when we stop to think that they succeeded in having 151 birds placed under regular prizes in these two shows, besides an enormous number of Specials and this remarkable and unequalled record is still stronger when we know the fact that only nine birds which

were entered in the exhibit at New York were again in their exhibit at the Boston show, and again this record is still the more remarkable when we stop to consider that the Owen Farms are breeding the four most popular varieties, namely, Barred and White Rocks, White Wyandottes and Buff Orpingtons. They won first pen at New York in each of the varieties shown there.

New York.

White Plymouth Rocks—Champion male, Special for whitest female and many other Specials.

White Wyandottes—Many of the Club Specials.

Barred Rocks—Many of the Club Specials.

Buff and White Orpingtons—Many of the Club Specials.

Boston.

White Plymouth Rocks—Specials for best shade male.

White Wyandottes—\$100 Challenge cup for champion female. Special for best shape female. Special for whitest female. Special for best collection. Special for best cock, hen, cockerel, pullet and pen. Special for best cock and four hens, and the majority of the other Club Specials.

Grand total of fifty-five points, eighteen more than was ever made before at Boston by an exhibitor of White Wyandottes, and the second best record was made by Owen Farms in 1906.

Buff Orpingtons—Special for best colored male. Special for best shape female. Special for best shape male, and Special for best collection. Special for best cockerel and four pullets.

Black Orpingtons—Cup for champion Orpington male, goes on the black cockerel. Special for best colored male. Special for best colored female. Special for best shape female.

White Orpingtons—Cup for Orping-

ton female, goes on the first pullet. She also wins Special for best shape and best colored female. This wonderful pullet "Harriet" won first prize at the Crystal Palace show, London, and is without doubt the most valuable female in the world. Special for best collection. Special for best cockerel and four pullets. Not a white Orpington shown in New York was shown in Boston.

Black Orpingtons—Special for best collection. Special for best cockerel and four pullets.

It was quite a surprise to the poultry world when the Owen Farms brought in an exhibit of White Orpingtons at the Madison Square Garden show, as no one supposed they were breeding this variety, and the surprise was still greater when they won three out of four first prizes competed for.

They won nine first prize pens at the New York and Boston shows, winning at New York first on Barred Rocks, first on pullet breeding Barred Rocks, first on White Rocks, first on White Wyandottes and first on Buff Orpingtons. They also won first pen in each of the following varieties entered and at Boston they won first pen White Wyandotte fowls, first pen White Rocks, first pen Black Orpington chick, first pen Buff Orpingtons and first pen White Orpingtons.

This is indeed a glorious victory for Owen Farms.

REVIEW OF THE BUFF WYANDOTTE CLASS AT MADISON SQUARE GARDEN.

By Dr. Sanborn and J. E. Willmarth.

There were six cocks, first being an easy winner, getting also the Special for best male; fine head, with exception of a torn wattle; one even shade of medium buff all over. Second cock was

a large bird, well built and in good show order; light shade of buff. Third cock, a low down bird, much like first but lacking red color in eyes; when full feathered will be hard to beat. Fourth, a large soft colored bird, rather light in color and has a large comb, full of life. Fifth was strong in color, good head, tail carried rather high, being in poor feather.

Hens numbered six, first being of good size and nice type, medium shade of buff all over, rather poor comb. Second, a big bird of grand type and even color, a trifle light in leg color, but not shown at her best. Third was good type and size, body a shade lighter than neck. Fourth hen was large and good shape, and even solid buff all over, but failed to winners in poor legs and lobes. Fifth, rather long in back and a light shade of buff, an unplaced hen showed better type, but in poor condition and rather small.

Cockerels were the banner class, with thirteen birds in line. First was nice color, except body was a trifle lighter than hackle, had an extra fine head. Second bird took shape Special and was a nice shade of medium light buff all over and had a fair head. Third was a fine colored fellow, good shape but rather poor in head. Fourth, similar to second, not quite as good color. Fifth, medium dark shade, fair shape and color.

Pullets numbered ten, first being the star of the class, grand shape and color but rather out of condition. Second resembled first, smaller and not quite as good all round. Third was grand body type and nice even color, a trifle dark and slightly up on legs. Fourth somewhat similar. Fifth, good type and color, lacks in eye color.

Pens started with a well mated pen, headed by a grand shape and color cockerel, a trifle small. Second pen well mated, good in type and color. Third

HAUPT'S ORPINGTONS

In Single or Rose Comb Buffs, Whites or Blacks are conceded the best. Ten years an Orpington specialist, having won hundreds of prizes, specials, cups, diplomas, etc. Does that stand for anything? Have started more successful Orpington breeders than all others. Winners at New York, Phila., Allentown, Jamestown Expo., Va., Easton, etc. Our latest success at Pa. State Show: 1st pen W. Orps., 1st pen Blk. Orps., 1st S. C. Buff cock, 1st R. C. Buff cock, 1st R. C. Buff hen; 5 possible 1st prizes on 6 entries. For stock, eggs or chicks, write us. We guarantee all our dealings.

FAIRVIEW FARM - J. S. HAUPT - EASTON, PENNA.

Barred Ply. Rocks and Columbian Wyandottes

Barred P. Rocks which are bred from a list of winners at the hottest shows in this part of the country for the past 12 years. We offer for sale both old and young stock, singly, in pairs, trios or pens for pullet or cockerel mating. Books now open for egg orders. : : : : :

Col. Wyandottes which have never been without a place in the show rooms for the past 4 years. We only offer for sale a number of fine shaped, blocky ckl. with good markings. Orders for eggs should be booked early, as we will have only a limited number of Columbian Wyandotte eggs. :

Bed Rock White Leghorn Farm : C. C. Foster, Proprietor : Quincy, Michigan

A REAL TRIUMPH IN White Wyandottes

In as strong a class of birds as was ever shown in the White Wyandotte world (outside of New York City) including winners from the late Chicago and Cincinnati shows, on an entry of sixteen birds I won first cock, third cockerel, second hen, first and second pullet and first and third pen. National White Wyandotte cup for best cock, hen, cockerel, pullet and pen. Best display—three \$25 loving cups, three \$10 cups, three silver medals and other prizes. My first pullet and second hen were the great attractions of the Wyandotte class. My first pullet was considered by four judges to be the most typical female they had ever seen. I refused a large price for this bird. She is in my first breeding pen. I will give you honest value for your money. Eggs, \$5 and \$10 per setting. Stock about all sold.

F. D. Sutton : 68 St. Louis Avenue, Youngstown, Ohio

NOTICE TO ROSE COMB R. I. RED BREEDERS

At the great Chicago show, December 7th to 12th, in the strongest Rhode Island Red class ever exhibited, including both the Eastern and Western breeders, my male "KING PHILLIP" took first cock. My other prizes were as follows: Second hen, third pen, fourth pullet, fifth cockerel. My exhibit of forty splendid Rose Comb Reds of uniform color and type has never been surpassed. I was the only exhibitor winning in every class. Send for free sale sheet. Mailing list will be ready after February 1st. Rhode Island Red Book—Origin and History of Rhode Island Reds; How to Mate and Breed Them, Etc., for ten two-cent stamps, ready January 1st to 12th.

THE BEST IN THE WORLD TEMPLIN'S SPRAY PUMP

The Best Pump in the World—"Templin's"—with a poor nozzle attached, would make a very poor combination; a poor sprayer. The Best Nozzle in the World—"Bordeaux" attached to a poorly constructed pump would make a poor combination; a poor sprayer. But the "Templin" Pump and the "Bordeaux" Nozzle combined, as we have them, makes a union that for strength, durability and efficiency, fully meets the requirements of the most exacting users.

IT'S JUST WHAT YOU NEED TO WHITE-
WASH YOUR POULTRY HOUSE

Guaranteed for two years. Full description
and price in our 1910 catalogue.

TEMPLIN'S "WONDER" GRAPE COLLECTION

For fourteen years we have been offering this splendid collection of 8 Grape Vines for 50c. Of course, a few changes were made in the varieties by adding new and superior ones instead of the old. As it is now it contains

More good vines and
More high grade varieties than
Were ever before offered for 50 cents

The collection contains three black, two red and 2 white sorts; a rare selection of "the best in the world," considering hardiness, vigor, productiveness and excellence of flavor, as follows: Brighton, Concord, Delaware, Diamond, Lindley, Moore's Early, Niagara and Worden.

JUST WHAT YOU NEED FOR SHADE IN YOUR POULTRY YARD

Order today! We will send the eight varieties, good one-year-old vines, to any address, postpaid, for 50c. And if you mention American Poultry Journal when you order, we will give you one vine extra—nine vines for 50c. Our 1910 Catalogue Free—Write for it today—just now. It contains many other great and liberal offers; we can't give them here. It also contains Nine of the Best Breeds of Poultry.

L. TEMPLIN SEED CO. : BOX 90 : CALLA, OHIO

were good shape and color but not as well matched as above. Fourth was headed by a nice male but pullets were not very evenly matched. Fifth contained some very good ones but male was darker than pullets and latter varied in size.

RUMBLINGS OF THE CHICAGO SHOW.

Many were the complimentary remarks to be heard of the fine Partridge Plymouth Rocks of S. A. Nofztger, North Manchester, Ind., who is the originator of this grand breed of fowls, and well did his exhibit deserve the commendation which they received, for they were typical Rock shape, fully equal to the average shown in any other Rock class, and as to color, no other Partridge variety excelled them.

The first cock was simply grand in shape and color, the bird having as good quality as any other in the show, better hackle and saddle color than is being produced in any other bird, and he had a solid black breast and fluff.

The second cock, while very rich in color, with rich bay eyes, was not quite so good in shape, but good even in that respect.

The first cockerel was a ten-pound bird, a rich colored fellow, good from head to foot, and we are informed the full sisters of this bird were in first prize pens.

The second, third and fourth prize cockerels were big, husky fellows, indicating that Mr. Nofztger has not overlooked size and vigor in producing his strain.

The first and second hens could either of them have been placed first, as there was little room for choice between them, both being typical in shape and elegantly penciled, the sides being rich mahogany in color. The third hen was a little short in feather, otherwise she might have given a better account of herself. Four grand pullets were first, second, third and fourth, and we learned that these were full sisters to some of the cockerels shown, which is surely a gratifying fact to anyone who contemplates taking up this variety, as it is proof conclusive that no double mating is required in this variety, and that they are breeding very close to standard requirements. To all who are casting about for a variety, or the breeder who desires to try another variety, we would suggest getting in touch with Mr. Nofztger and consider well this beautiful variety of the Rock family before coming to another decision. His ad is to be found elsewhere in this issue.

The Baltimore Show

Held at Fifth Regiment Armory, January 4 to 8, 1910—
A Truly Great Show

We must say that the Baltimore show presented the prettiest appearance of any poultry show room we ever stepped into. The 5th Regiment Armory contains 60,000 square feet of floor space which is entirely unobstructed. Empire cooping was used throughout, all birds being cooped in individual coops and the hall was handsomely decorated with bunting. There was a large pen in the center of the room, divided into four sections, in each of which was to be found different varieties of geese, ornamental ducks, turkeys, etc., while at either corner of the room was a pedestal upon which was a figure of a large turkey. The armory certainly afforded the best light we have even seen in any show room, either night or day. It is much to be regretted that the weather the earlier part of the week was very bad, a drizzling rain falling which froze as fast as it fell. The attendance, therefore, was poor up until Friday, when the weather changed and a large crowd came out on Friday afternoon and evening; also again on Saturday. We understand the show was a success financially and it certainly was a success from a fancy standpoint and much credit is due the secretary, Mr. George O. Brown, for his good work in putting on this show. We feel that he was not supported to the extent he should have been by some of the other members of the association. Many of the birds from Madison Square Garden came down to Baltimore to fight for the many coveted prizes. The association offered some

sixty-four handsome silver cups, besides many other special prizes. Two large show cases were required to contain these cups and it certainly made a beautiful display. Some of them were solid silver and valued as high as \$100. These premiums brought out a large entry and about 3,000 head of chickens and pigeons were on exhibition.

That the show was an unqualified success in every way goes without saying, and we hope to renew our many acquaintances another year.

One of the most remarkable winnings in the show was made by the Ellenwood Poultry Farms, Charles W. Lord, manager, Hatboro, Pa., who exhibited both Single and Rose Comb Rhode Island Reds and succeeded in capturing nine out of possible ten first prizes. This great victory for the "Champion Strain" of Rhode Island Reds, following as it does upon the creditable showing which they made at Chicago, justifies the name of Champion. Their winnings in detail were as follows: On Rose Combs, first, second and fifth cock; first and third hen; first, second and fourth cockerel; first and second pullet and first pen. On Single Combs they won fifth cock, first and fourth hen, first and second pullet, first and second cockerel and first pen; also best Rose Comb cockerel and silver cup for best display of Single Comb pullets, this being won in a class of 44 pullets, special for best Single Comb hen, and numerous other specials.

The first prize Single Comb pen contained an exceptionally fine male, being very long in body, typical red type, with the rich brilliant shade of red so much desired, and the four females comprising this pen matched the male in color, with the ideal long bodied type and were so nearly alike it was almost impossible to detect any difference between them. It was, we think, one of the finest pens of Rhode Island Reds which has been shown this season. Another wonderful bird shown by the Ellenwood Farms was the first prize Rose Comb cock which is a very wonderful bird, having rich even red surface color throughout, there being no perceptible contrast in his various sections, no black in the hackle, with a fine black well striped tail, having good eye and head points and very strong in under color and wing markings and the long bodied type which we are all striving for. This bird was an easy winner in his class and will head one of their best pens this year. We believe this victory has never been equaled by any breeder of Rhode Island Reds and they certainly had the quality to justify it. Their first prize Rose Comb Rhode Island Red cockerel was, we think, one of the best Rhode Island Reds we have seen in a show room this season, reminding us very much of the first Rose Comb cockerel at the Garden.

Their hen Ellenwood Queen, which was second prize at Chicago, where she also won special for best shaped hen in a class of 88 females, again added to her laurels by winning first prize and special for the best Single Comb hen in the class. Another bird worthy of mention is their first prize Rose Comb hen, which is a three-year-old bird having a wonderful color, being as deep and rich red throughout in all sections as any pullet.

CRUSADER III

Regal White Wyandotte Book

I have just received from the press my new book on White Wyandottes. It contains 52 pages and is the most complete book that has ever been published dealing wholly with the White Wyandotte. It is full of illustrations from life and its pages deal with a variety of subjects including origin, description, feeding, care of breeding stock, fertility, color, characteristics, washing for exhibition, poultry diseases, etc. My object in issuing this book is to bring to the attention of every White Wyandotte breeder, the Regal strain, America's finest White Wyandottes. The magnificent winnings of this strain at the leading shows have never been equalled. N. Y. State Fair, 1906, 1907, 1908 and 1909—21 blue ribbons out of a possible 24. Would you like such a record? Then breed the Regal strain. 1,000 Regal cocks, hens, cockerels and pullets for breeding or exhibition. Free—Send for my book—It is free.

JOHN S. MARTIN
Box 51, PORT DOVER, CANADA

all the Orpingtons of Scotch Plains, New Jersey, exhibit of Orpingtons was one of the principal ones, drawing crowds of people. Their \$1,000 black Orpington cock was the drawing card, bringing out many people not only in Baltimore but adjacent cities. This firm won eleven first prizes and five second prizes and captured two cups for the best display of Orpingtons. Mr. P. A. Cook, who was at the exhibit, reported very good sales, among which was the first prize, won by this well known Orpington firm, as first buff Orpington cock and first buff Orpington pen. The buff Orpington cock is acknowledged to be the finest specimen of this variety ever exhibited. The most attractive winnings in blacks were the first and second black Orpington cockerels, \$500 being refused for him. His other winnings were also first hen in this class. This bird is the finest colored black Orpington hen that has ever been exhibited. The display of white Orpingtons exhibited by this firm was also very much admired.

Sunswick Poultry Farm, South Plainfield, N. J., were on hand with their sensational Buff Orpington hen that won first at Madison Square Garden, doing likewise here. The entire exhibit of the Sunswick Farm attracted a great deal of attention, and we heard much favorable comment on the birds exhibited by this firm.

Kellerstrass Farm, Kansas City, Mo., brought on thirty-four of their celebrated crystal White Orpingtons to be exhibited at the Madison Square Garden show, where they won fourth, fifth and sixth cocks, fourth and sixth hens, second and third cockerels, first and third pullets, and second and fourth pen. Their white pullet was the center of attraction, as she stood out in a class by herself. The competition in White Orpingtons, one of the largest classes at the Garden, showed how popular they have become. This same string of birds came to Baltimore and won first, third and fourth cocks, first, third and fifth hens, first, second and fifth cockerels, first and fifth pullets, and first and second pen.

While at Baltimore we had the pleasure of meeting Mr. James B. Clarke, of Ellicott City, Md. Mr. Clarke was very much in evidence in Barred Rock alley, capturing first cock, fifth hen, fourth cockerel, and fourth pen on five entries. The first prize cock exhibited by Mr. Clarke was the attraction of the class. Seldom have we ever seen such straight, narrow, deep barring, bright, sharp color shown on an aged Barred Rock. He was also awarded special for best shape male and special for the best cock in the show. His birds have also been winners at Hagerstown, Md., and other shows. Mr. Clarke was a winner in Barred Rocks at Baltimore in 1909, and is certainly breeding high-class stock. Last year he captured four first prizes on Pekin ducks, first Rose Comb Rhode Island Red Cock, and fifth cockerel. He is still breeding these varieties on his farm at Ellicott City, Md., and takes pleasure in showing his stock to visiting fanciers. At Hagerstown, Md., this year, he captured first cock.

The exhibit of White Rocks at Baltimore this year was one of the strongest classes in the show, and the birds shown by Mr. A. R. Early of Roseland, Md., received most favorable comment. His first prize pen was said to be the best ever shown in Baltimore. They

Louis Lee Haggin

✻ RUSSELL CAVE POULTRY YARDS ✻
LEXINGTON : KENTUCKY

were of that typical long-bodied type so much desired by all breeders of this variety, also pure white in color, with extra neat head points. Mr. Early also captured third cockerel and fifth pullet. The fifth prize pullet would undoubtedly have been placed higher, but was not in the best of condition at the time judged.

While in Baltimore, we also met Mr. Lewis Lee Higginson, owner of Russell Kay Poultry Yards, Elmendorf Farm, Lexington, Ky., breeder of Single Comb White Orpingtons. His second prize White Orpington pullet was a bird of exceptional quality and in most any other competition would have been an outstanding winner of first. At Lexington, last year, Mr. Higginson captured first cock, first and second hen, first and third pullet, and first pen. At the Scott County Fair, Kentucky, he made a clean sweep. At the Blue Grass Fair, first and second cock, first and third hen, first cockerel, first and third pullet; at Kentucky State Fair, first and second cock, first, second and third hen, second and third pullet, first and second cockerel; Missouri State Fair, fourth cock, second hen, first cockerel, fourth pullet. When the popularity of the breed is considered and the competition Mr. Higginson had to meet, this certainly is a phenomenal showing, and bespeaks much for the quality of his stock.

THE BABY CHICK INDUSTRY.

The coming event in the poultry world is the day-old-chick idea. While to many people in America the sale and shipment of day-old chicks seems to be

an entirely new part of the poultry business, yet in reality it is as old as history itself. The huge hatching ovens of Egypt, China and Japan have been turning out for ages hundreds of thousands of chicks annually which have been sent out to all parts of the country by the slow going donkeys on journeys entailing as much time as it does to take a journey of hundreds, even thousands, of miles in this country of rapid transit. That the method has been successful is proven by the fact that it has endured through the centuries even to this day. In fact, the method is so successful that the Egyptian hen has forgotten how to set. She devotes her entire time to laying eggs for the superior talent of man to hatch. Since the fact is true that the Egyptian hen no longer incubates her own eggs, it is necessary for people to get their chicks from the large hatcheries, and as these are only located near the centers of trade it becomes necessary for those wishing chicks to transport them long distances, which is done every season. In Egypt fowls form a very important part of the diet, so we can readily see why the business has attained such huge proportions.

In Europe, in England, France and Germany the business has assumed very important proportions. The parcels post system has done much to promote the business. The writer knows of a shipment of chicks sent by parcels post from London to Berlin. Upon arrival the chicks were found to be as bright and happy as though they had not made a journey of 800 miles across the North Sea.

It is only in the last ten years that the business has grown any in this

country, but it is destined to assume a very important place in the American poultry business due to the many advantages of this method.

Baby chicks as sent out direct from the incubator, shipped by express when one day old, is a simple and directly effective way of making a start. By shipping direct from the incubators when the chicks are one day old advantage is taken of that period in the life of the chick when nature intended they should be without food and they can, therefore, without injury or discomfort be sent long distances by express and under any conditions of climate. Chicks when first hatched require neither food nor drink. Indeed such is harmful. During the first seventy-two hours the chick's life is sustained by the assimilation of the yolk, for the embryo chick develops from the white of the egg and the yolk is secreted into its system and is first sustenance. During this period chicks can be shipped as far as express can take them. It is not uncommon for chicks just hatched to be shipped one thousand miles. The mortality is about one per cent.

Many large poultry plants and utility farms have found in the purchase of day-old chicks a convenient and economical means of increasing their flocks and may at the same time through the introduction of new blood raise their standard for size, stamina and laying qualities. The large commercial poultry farms have also found that considering the investment required in incubators and outlay of time and money necessary to maintain a breeding establishment it cost them more to hatch out their own chicks than to buy little hustling chicks direct

fifteen. Satisfaction guaranteed.

KITTATINNY POULTRY YARDS

C. L. Puder, Prop. : Irvington New Jersey

from the incubators, thus can make an
actual saving in time and money.

The purchase of day-old chicks in-
stead of breeding birds or hatching
eggs is rapidly becoming a popular way
of acquiring new blood, and it is a
successful way too. It is convenient
for those who do not wish to have the
trouble or the risk of hatching, for
those who have no incubating equip-
ment and do not wish to go to the
expense of the same, and for those who
have insufficient equipment to hatch the
number of chicks they will require at
the time that they want them.

To the poultry farm of smaller size
or to the farmer who raises chickens
merely as a side line and treat the eggs
and poultry as a by-product of his farm
and who does not care to bother with
hatching eggs, day-old chicks come as a
special opportunity. Formerly the
farmer who went in poultry in a small
way had to choose between the trouble
of setting hens or the expense and care
of incubators with uncertain results.
Today, thanks to the baby chick idea,
this same man may make a start on an
equal footing so far as superiority of
strain is concerned as the largest and
most successful breeders and com-
mercial poultry plants and with the
same opportunity for profits and will
have the time formerly spent in incu-
bating free to look after the youngsters,
thus increasing materially his chance of
success.

Baby chick farming has a future all
its own as an avocation for town and
village dwellers or suburban residents
whose work with poultry must be gov-
erned by the conditions of small ground
area and time limited to the require-
ments of their regular business. The
elimination of the vexations and un-
certainties of the hatching period, al-
lowing this time to be devoted to the
chicks, greatly increases the chances of
success, making the care of poultry but
a pleasant diversion, which not only
pays definite dividends in health and
recreation, but unlike other hobbies
yields a revenue which not only makes
it self-sustaining but profitable.

To women especially the rearing of
the little downy balls of life is filled
with fascination, while for children
there is no way of cultivating love of
animate nature and developing powers
of close observation than to place the
poultry outfit wholly or partly in their
care, according to their enthusiasm.

And so I say to you enthusiastic
lover of fine fowl—man or woman, boy
or girl—make a beginning, be it in city
yard or suburban lot, or upon a farm.
Make a beginning, but begin right,
begin with baby chicks.

Lyndon, Ohio.

R. C. Caldwell.

WHY ANCONAS ARE MY CHOICE.

WHEN I started in the poultry
business, the greatest question
in my mind was the choice of
a breed. There were plenty of
breeds to choose from—some practically
valueless as egg producers, some other-
wise. It was of the "otherwise" kind
I wanted to make my selection.

I wanted a breed and strain that
could be depended on to meet any and
all chicken requirements that could pos-
sibly be concentrated into one flock of
birds. During my search I traveled a
great deal and read more than I trav-
eled. My eyes were constantly on the

outlook for a good article, either in the
poultry press or the poultry pen.

My birds must be hardy and easy to
raise. They must be prize-winners at
the shows, and also fill the egg basket
in the shortest possible time. They
must show superiority on the table as
well as on the nest. They must be
pleasing alike to the eye and the pocket-
book.

After studying all the good breeds, I
finally decided on the Anconas as com-
ing nearer to Sheppard's Standard of
perfection than any other.

This noted breed of chickens, im-
ported from Europe but a few years
ago, has gained great prestige among
the fanciers in America, and yet more
has it found a place in the estimation
of those who look upon the utilitarian
side alone of this beautiful, active and
ever alert bird. Its attractive color,
beautiful form and graceful carriage at
once gives it a place among the prime
favorites of the coop, in the competitive
show as well as on the table of the
preacher, and the crates of the egg-
producer.

I have known pullets to lay an aver-
age amount of 259 eggs each per year
for the entire flock, and this in the
cold climate of the Northern States.

They are active and hardy and with-
out doubt flourish best in close con-
finement of any known breed. Their
eggs hatch the largest percentage of
all breeds, because of their superior
hardiness. The chicks run forth from
incubator and brooding hen as alert as
matured song birds.

Young cockerels often crow at the
early age of six weeks. Pullets will
frequently lay when four and one-half
months old, when properly cared for.
It is my firm belief that on account of
their phenomenal growth they will pro-
duce more meat by the end of ten
weeks after hatching than any other
breed of this class, and even some of
the larger breeds.

The Ancona rooster makes surround-
ings cheerful on account of his hearty
crow. He has an ever watchful and
faithful care of his flock, going into the
nests and feed bins, calling his hens to
business and rations. No wonder the
Ancona hen is the greatest egg pro-
ducer of the poultry yard.

They invariably hatch true to the
characteristics of the breed. There-
fore one can depend on getting the fin-
est and most useful of birds when
hatched from Ancona eggs. All in all,
the Ancona is the bird you want to
breed for more chicks, more eggs, more
meat, finer feathers, more activity, more
cheer and less vermin and smaller rat-
ions than any breed in the world.

Berea, Ohio.

H. C. Sheppard.

"BETTY OF SUNSWICK."

In this issue we present the photo of
"Betty of Sunswick," the first prize S. C.
Buff Orpington hen at the late Madison
Square Garden and Baltimore shows. This
bird is without question one of the finest
Buff Orpingtons in this country today. She
is to be mated with a grand imported cock
and will no doubt produce stock that will
be the sensation of the shows next season.
She is owned by the Sunswick Poultry
Farm, South Plainfield, N. J. Their new
catalogue and mating list is now ready for
mailing and our readers should send for a
copy. When writing mention American
Poultry Journal.

A. F. Almandinger reports winning on
his R. C. Buff Leghorns at Madison Square
Garden, New York, 1st cock, 1st cockerel,
Hamburg, N. Y., same dates, 1st and 2d
cockerels, 1st and 2d pullets.

White Wyandottes

FORCE SALE

Our winnings at St. Louis, Cleveland, Nashville, Indianapolis, time after time, San Antonio, Springfield, and all the leading shows of the country is proof of the claim we make of having

THE WORLD'S BEST WHITE WYANDOTTES

They have won in every state in the union against all comers in the hands of our customers. FROM A UTILITY STANDPOINT, the White Wyandottes are spoken of as the Standard utility fowl. LISTEN, the White Wyandottes will lay more dollars' worth of eggs in a year than any other breed. They may not lay as many eggs, but what's the difference? If you have White Wyandottes you get eggs in the winter, when eggs bring the highest prices. THE WHITE WYANDOTTES ARE THE WINTER LAYERS. Therefore lay more dollars' worth of eggs than any other breed. If you do not think they are the winter layers, ask the Experimental Stations. Look up the records.

BARGAINS

We will close out a grand lot of birds this month at prices that will move them. We have mated our yards as you will see later, and we must have the room. Order direct from this advertisement, and get first choice.

150 cockerels, all around good breeders, good size and shape, in fact, a bird that will please you. Intended to sell at \$10.00 and \$15.00 each. They must go at \$5.00 each.

200 utility cockerels, worth twice the money asked, bred from heavy laying strain, a great bargain at \$3.00 each.

150 laying hens that lay when eggs are worth the most. Sale price \$2.00 each.

50 laying hens. Good breeders, with a laying record unequaled; your gain, our loss, at \$2.50 each. This is one dollar value for fifty cents.

50 pullets intended to sell at \$4.00 and \$5.00, but will clean them out at \$2.50 each. Not many—get your order in early.

BARGAINS

75 cockerels, pure white, birds fit to head any breeding yard, extra good in shape, would trot in the best shows, worth from \$15.00 to \$20.00, but will sell them at \$10.00 each.

50 line bred pullets, extra fine top notchers, Wyandotte type throughout, good color, worth \$10.00 each but forced to sell at \$5.00 each. These pullets would show well.

Pairs, trios, pens or any number you wish can be selected from these prices. Get in early so as not to be disappointed by being told your selection has all been sold. These prices here are not all the bargains by any means. Write your wants.

EGGS EGGS

We have mated our yards, seventeen in all. The grandest matings we ever had. Pen A1—five of the World's Best Pullets mated to the World's Best Cock. These six birds are as good, if not the six best White Wyandottes in the country today. These are birds

THAT MONEY CANNOT BUY

From eggs from these birds the prize winners at the principal shows next season will be hatched. We could not get better stock than we have in this pen if we were to offer

\$5,000.00 EACH FOR FIVE PULLETS

Because we already own the World's Best, and this pen is the

BEST OF THE WORLD'S BEST

We do not care to sell an egg from this pen, as we know what they will produce. But to those who insist upon and must have the best the country affords we will spare a limited number of eggs from this mating at \$5.00 each, or \$75.00 per sitting of fifteen eggs.

Pen A2. Seven hens and a cockerel, of course the best cockerel we raised this year, in fact, the best cockerel we ever owned. The hens are the seven best hens living today. Eggs from this pen at \$50.00 per sitting of fifteen eggs. With the exception of Pens 1 and 7, all eggs at \$5.00 per sitting of fifteen eggs. Pen 1 eggs at \$15.00 and Pen 7 at \$10.00 per sitting of fifteen eggs.

Send us a dime today for our catalog describing Fisheldotte, the Home of the World's Best White Wyandottes—it is worth dollars to you. You can judge from it the quality of stock you will get from the eggs you purchase. Send at once, today, without delay.

J. C. Fishel & Son, Box J, Hope, Ind.

Unsurpassed in Quality. Like Begets Like.

Eggs, \$3 and \$5 per setting

W. H. WIEBKE

Box P-348, Fort Wayne, Indiana

of credit, but he who attains success under adverse circumstances deserves far more. Mr. W. W. Kulp of Pottstown, Pa., an invalid for years, through sheer force and fortitude has attained a standing in the poultry world that a well man would justly be proud of. Broken in health, back in the eighties, suffering from a malady from which he has never recovered, he took up thoroughbred poultry for a livelihood.

What has been his success? Breeding the highest class stock fit to win and which has won time after time at such shows as Madison Square Garden, Boston, Philadelphia and a dozen other shows, treating every customer on the square and establishing egg records far beyond what could be expected, these are few of many virtues that go to make up an almost magical success.

Perhaps Mr. Kulp is best known from his Rose Comb Brown and White Leghorns. He doesn't breed the little ones that are so often seen nowadays. His Rose Combs are as large as any Leghorns ever seen, equal in every respect to the largest Single Combs. Through trap-nest records he has raised many birds that have gone far over the 200 egg mark per year.

He surely has exploded the theory that a man can only make a success of one variety. His flock of winning White Wyandottes are the superior to many specialty breeders. Also his Single Comb White and Brown Leghorns are of the big, rangy type and with color hard to beat. His Barred Rocks and S. C. Rhode Island Reds are not behind the best of them.

Your representative visited Mr. Kulp in October. We called him up by 'phone. He insisted on sending his carriage. This we would not allow him to do on such a beautiful fall day. We started for his place, a mile and a little more distant. This delightful walk through the old Pennsylvania hills was only surpassed by the hearty welcome given us at the Kulp homestead. Would there were more Kulpes in the poultry business. The readers of the American Poultry Journal should send to Mr. Kulp for his handsome catalogue.

ORPINGTONS AT BALTIMORE.

R. J. Knisley, York, Pa., breeder of S. C. Buff, Black and White Orpingtons, York, Pa., made an exhibit of his Orpingtons at the late Baltimore show and won as follows: On Single Comb Buffs—4th and 5th cock; 3d and 4th hen; 1st and 3d cockerel; 2d, 4th and 5th pullet. On Single Comb Blacks—3d cockerel. This we consider a remarkably good winning in this class. Write him for further information and prices. Mention American Poultry Journal.

A FRAUD.

A man giving the name of H. K. Bond has been representing himself as authorized agent of the American Poultry Journal at various shows. The public and show secretaries are hereby warned that this man is a fraud and will be prosecuted if caught. Anybody knowing his present address will oblige us as well as assist justice by telegraphing us at once. He is about 23 years old, 5½ feet high, light hair and blue eyes.

"We lead, others follow," is our slogan.

ROSE COMB WHITE MINORCAS.

The above are photos of the first prize cockerel and first prize pullet at the late Chicago show. These birds were easy winners in their class. Mr. Hurlbert also won several other prizes at the show.

GOLDEN WYANDOTTES.

The above pair of Golden Wyandottes were the sensation of the late Chicago show in the Golden Wyandotte class, and were pronounced the finest birds of this variety ever exhibited at this show.

CHICK CHATS

by H. P. Schwab

This department is open to all readers and advertisers in the eastern territory and all are invited to send in all poultry news items that come to their attention. Address H. P. Schwab, eastern representative, Irondequoit, N. Y.

Did you miss our little talk last month?

* * *

Rheumatism is not only capable but actually mean enough to upset the best laid plans at times.

* * *

Sorry, too, for we had so much to tell our friends.

* * *

The Great Shows are now upon us, and we hope the relief granted is permanent.

The Williamsport (Pa.) show proved all its best friends claimed for it; with something over 1,600 entries, and several of the best breeders from many states as exhibitors, made a show of rare quality.

* * *

And those boys know how to manage shows. They are fanciers in every sense, and their only care was to have everything right and proper. We predict their next show will break all records. Report of classes later.

The "Ontario," held at Guelph, Ont., Dec. 7-11, was also a record-breaker, with something over 4,700 entries. More American breeders should go after this. There are grand opportunities over there for business. The Canadians are good buyers if shown the goods, and we confidently expect to see more of them exhibiting there. Report of the show and classes later.

The great Rochester (N. Y.) show has also been held, with close to 1,600 entries; classes all well filled and a good quality. To say the least, this was a neat show, handsomely arranged and grandly handled. We found all the exhibitors very enthusiastic over the generous treatment accorded to all, and from promises made look for the next to surpass anything Rochester has ever had. President F. C. Lauer and Vice-President Dr. C. J. Andrus were in evidence at all times to entertain visitors, while Secretary Drechsler and Superintendent Tallinger, with Directors Rulifson and Guenther, looked with greatest care after the exhibitors and the wants of the birds. It was one of the cleanest and best arranged shows we have ever attended.

* * *

The Partridge Wyandotte class was the feature class of the show. Judge Quilbot had his hands full here with the fifty or more birds of high quality shown. He handled himself grandly and received the plaudits of all. Harry M. Gates made a grand record, winning four first prizes. Chas. B. McEwan also came in strong with one first and several other places.

* * *

The Buff Plymouth Rocks, ever popu-

"Quality" White Wyandottes

Choice stay white birds of approved shape, good weight and blood lines. Great Winter layers. Some extra fine show birds in cockerels and pullets and a large number of general purpose fowls. Invigorate with these vigorous farm bred birds, while opportunity offers. Eggs, \$5 per 15; \$12.50 per 50; \$20 per 100.

Pangalow Farm, R. F. D. 12 Indianapolis, Indiana

ELLENWOOD POULTRY FARM

ROSE COMB AND SINGLE COMB "CHAMPION" RHODE ISLAND REDS

ARE STILL IN THE LEAD, this season our winnings proved that our quality excelled, having won more firsts regular and special prizes than all our competitors combined, at four of the leading Red shows of the year where we met and defeated the best of the past season's production in the hands of the leading breeders of the continent. At the Great Mid-West Show held in Chicago where the club meeting was held this year, we won three of a possible shape specials, thus proving our quality superior, and then to finish the season at the RECENT BALTIMORE SHOW where in competition with nearly 250 REDS we won nine out of a possible ten firsts, three Silver Cups, and 15 other REGULAR and SPECIAL PRIZES. Our matings this season surpass any of our former, so if you want the best in the world do not fail to get your EGG ORDER to us in time for early delivery, you will profit by doing so, as our prices will be one-half our Catalogue price during February, just the time for you to get out your pullets and cockerels for the FALL SHOWS. This will enable you to rank with the LEADERS this coming season. Catalogue and Mating List mailed upon request. A GRAND LOT OF COCKERELS STILL FOR SALE AT REASONABLE PRICES.

Chas. W. Lord, Manager, Hatboro, Pennsylvania

lar, are to the front this year with renewed interest. The best Buffs we have ever seen have been shown last and this year, and the future promises more for them.

* * *

From the East came reports of the Buff Rocks bred this year by Mr. M. J. Corry, Springfield, Mass. We saw this line at the last Boston show, and commended their type and color.

* * *

Another strain of Buff Rocks we met at Boston was that of Mr. Fred W. Cobb, Newton Upper Falls, Mass. We hope, when East this spring, to visit both these places and write them up for the A. P. J. Both these are "Our" "Folks," and intending buyers will do well to write them their wants.

* * *

Artist Stahmer certainly gave us a fine piece of work on the December cover. We look for more of this kind of work to follow. Samples of his catalogue, letter-head, envelope, etc., work can be seen for the asking. Keep up to date.

* * *

Henry D. Riley made a record on Barred Rocks at Williamsport, Pa., winning four first prizes in a class filled with quality. This line is of New York and Boston caliber, and we hope to meet them again.

* * *

S. M. Goucher followed close with first prize pen and three seconds. Their second cockerel was a wonder, finely barred and beautiful type. Too bad the judge found three black feathers. Second pullet was also a beauty in shade of color.

* * *

The Canadian breeders are missing a good thing by not better advertising their stock in the States. Those who have done so have succeeded. Taking John S. Martin, with his Regal White Wyandottes, for example, his business amounts to several thousand dollars a year, and he informed us that seven-eighths of this came from the States. Others can do the same if they will but broaden out and make a try for it.

* * *

We note that the Wells-Fargo Express Company has lately declared a dividend of 58 per cent for its stockholders—another good reason why we should have the parcels post.

* * *

Prof. W. R. Graham, of the Guelph (Ont.) Experimental College, has shown his hand. While he preaches utility to the natives and has clearly demonstrated many valuable facts along those lines that are of great value to the people of Canada, we still claim his best

Save You 50%

On An Incubator

I Can Do It, Just As I Promised I Would

MY new incubator—The Buffalo—fulfills the lifelong demand of thousands of poultrymen. It offers all the quality of the best high-priced incubators at **Just Half the Price**. In spite of the urgent requests from my many poultry friends for a cheaper incubator, I always said I'd never make a low-priced incubator unless I could make one as good as the high-priced kind my name has always been associated with. **I Have Made Good**. My principle is sustained and the demand of my friends gratified. I am proud of my new creation. The Buffalo is simply a wonder. There is nothing cheap about it but the price. I offer you an article that is second to none in durability, reliability, or quality. You can't get a better incubator than The Buffalo, no matter how much you pay. I guarantee to actually save you one-half.

Chas. A. Cyphers' Buffalo is Best of All

for I have retained and developed the same correct principles of internal construction in my former designs. My new creation has all the good features of the incubators I have made in the past, without the high price. The materials are the best money can buy. Where I make the big saving is in the method of manufacture. I simply cut loose from the old stereotyped ideas and worked out a new system of machinery, tried out different materials that cost less, but are just as good as others use, and are far more practical. This enables me to save you just half.

THE BUFFALO IS A MARVEL...

Weatherproof, fireproof, easy to care for, economical to operate, sure to give a high percentage hatch, and guaranteed to do all or more than any other incubator on earth will do, no matter what the price. If there ever was a perfect incubator, it is The Buffalo.

COMPARE THESE PRICES WITH WHAT YOU FORMERLY PAID FOR MY INCUBATORS AND BROODERS. The prices are a third or half less, while the quality is just as good. Without fear of contradiction, I can say the **QUALITY IS BETTER**.

50 Egg size Buffalo Incubator.....\$ 8
100 Egg size Buffalo Incubator..... 11
200 Egg size Buffalo Incubator..... 15

I Can Save You One-Third on Brooders, Too

The New Buffalo Brooders are the best I ever turned out. Strong, durable, temperature automatically regulated. Every poultryman who has seen them says they're the best on the market, and the price is fully one-third lower than my former designs sell for. Don't buy a brooder or an incubator or any kind of poultry equipment before you get my prices.

WRITE FOR MY CIRCULAR

I can't go into details of construction here, so write for my circular which tells all about Buffalo Incubators and Brooders. Every owner of an incubator, and every one of my million poultry friends should have a copy at once. Write today, and I will enclose with it Bulletin No. 2, which tells of a wonderful new poultry discovery.

CHAS. A. CYPHERS

President, Buffalo Incubator Co.

4700 Ellicott Square, Buffalo, N. Y.

work has been along fancy lines, and in particular with Barred Plymouth Rocks. We have seen his flock grow and improve for three years now, with prospects for the future of the best.

* * *

This also reminds us—"Jerry" has gone and done it. Yes, got married; and the Professor says that he is getting very forgetful nowadays.

* * *

The demand for exhibition and choice breeding birds is over double the supply. Each year finds us short, but at no time as short as now. New plants will shortly be built and nearly all the established breeders we have met so far have told us of the necessity to enlarge their plants. It's in the air. The general boom is on at all seasons in the poultry line. No fear of over-production. Fresh eggs now selling here at 50 cents per dozen.

* * *

Read our articles on the "Possibilities of the Poultry Industry." There is food for all in them. Prices for the right kind of stock will always hold good.

* * *

Captain Theo. Hewes has made good. From what we can learn, he has given Chicago and the West the best show they have ever had. Engagements prevented our attending, but we believe that every credit is due Mr. Hewes. May he keep his hold and carry to future success his policies so well begun.

AT PHILADELPHIA.

Mrs. J. W. Holton, Catasauqua, Pa., breeder of White Orpingtons, wins at Philadelphia show two firsts, one third and one special, four prizes on four birds in a hot class of White Orpingtons. Mrs. Holton is also a Scotch Collie fancier and owns Mountaineer Miranda, purchased at a long price from Mountaineer kennels, Glencoe, Ill. She has a fine litter of puppies out of her by Parbold Peacock, a noted sire, which she expects to develop into some fine dogs. Her ad appears regularly in the American Poultry Journal.

We lead, others follow.

Carver & Avey's Part. and Silver Penciled Wyandottes Are Always Winners

At the Missouri State Poultry Show, held at St. Louis, Dec. 6 to 11, 1909, in the largest class of all the Wyandottes, we won on Partridge, 1st cockerel, 5th cock, 1st, 2d pullet, 2d, 4th hen, 1st pen. Four Partridge Wyandotte Club specials and grand sweepstake silver cup for best pair in the show. On Silver Penciled Wyandottes in a large class with competition from three states, won 1st, 2d, 3d cock, 1st, 2d cockerel, 1st, 2d, 5th hen, 4th, 5th pullet, National Silver Penciled Wyandotte Club special for best colored male, best colored female, best shaped male, best shaped female. At Ohio State Poultry Show, Jan. 10 to 15, 1910, with four entries of Silver Penciled Wyandottes, we won 1st cock, 1st cockerel, 1st pullet, 1st hen. 300 EXHIBITION cocks, cockerels, hens and pullets, fine enough for any show or any competition. We are the LARGEST SPECIALTY BREEDERS OF PARTRIDGE and SILVER PENCILED WYANDOTTES in AMERICA.

CARVER & AVEY

BOX A

COLUMBIA CITY, INDIANA

Clemans' Columbian Plymouth Rocks

Won every first on single birds and pen and silver cup for display at the Great Chicago show, Dec., 1909. Following great males head 1910 pens: Pen 1, cock first Chicago. Pen 2, cock first Madison Square and Buffalo and heading first pen Chicago. Pen 3, cockerel first Chicago. Pen 4, cockerel 2d Chicago. Pen 5, cock 2d Chicago. All above males are the big boned real Rock type and great color. All the Chicago winning females and others as good in these pens. Eggs from above, \$5 per 15, \$15 per 50. From other good pens, \$3 per 15, \$5 per 30.

BLACK WYANDOTTES. My original prize strain, acknowledged by authorities the original Black Wyandottes. Eggs from great pens, \$4 per 15, \$7 per 30. Birds for sale. Circulars.

F. M. CLEMANS

MECHANICSBURG, OHIO

AUGUSTUS DAVID ARNOLD

The Columbian Wyandotte specialist, will give a number of settings of eggs free (see conditions below). Two years in succession at Madison Square Garden we won the championship cup for best collection. This season again at ten of the leading shows of the U. S. and Canada our customers won the leading prizes. At the Seattle-Yukon and Jamestown Expositions the leading prizes went to the Arnold strain of Columbian Wyandottes. We have sold eggs at \$30 per 15 and they gave the best of satisfaction. Our matings this season are far ahead of these, and results will be much better. But eggs will be \$5 per 15, \$9 per 30, \$12 per 50, \$20 per 100. We shall give free one setting of eggs to each of the three first persons from each state and Canada who order one or more settings of eggs with cash on the order after Feb. 1, and mention the American Poultry Journal. Eggs to be shipped when wanted. We have a fine lot of yearling and young stock for sale at right prices.

ELM POULTRY YARDS & STOCK FARMS

Hartford, Conn.

Established 1888.
Incorporated 1909.
\$10,000.00

Over 20 years spent with poultry, combining beauty and utility, winning sweepstakes, championships, medals, diplomas, cups, etc., etc. If you want strong, rugged, vigorous farm grown stock in pink of health and condition, send us your orders. We have pleased thousands and can please you. Over 5,000 birds on our farms. Cocks, cockerels, pairs, trios or pens (mated for best results) at reasonable prices. Eggs for hatching by the setting or thousand. Varieties: Barred White and Buff Rocks, White, Buff and Columbian Wyandottes, White, Buff, Brown and Black Leghorns, Buff, Black and White Orpingtons, S. C. and R. C. R. I. Reds, Brahmas, Langshans, Cochins, Houdans, Games, Ducks, Geese, Turkeys, Guineaes, Pheasants, etc., etc.; also Pigeons, Dogs, Goats, Sheep, Swine, etc., etc. Equipment for poultry plants, kennels, loft and farms. Combination prices at a big saving. Write today for our free bulletin, published quarterly.

STRUBLE'S S. C. BUFF ORPINGTONS

Won First Pen at Madison Square Garden, New York, Show, 1908 and 1909, with 15 pens competing, and we won on old birds, our competitors showing young birds. This pen was the sensation of the show and we refused \$500.00 for this pen offered by a prominent breeder, but we still have them in our yards and can sell you cockerels and pullets bred from this pen and others their equal that are properly mated for best results in and will produce winners for the best of shows.

We have helped others to win the blue at our largest shows and can help you and for the first time in five years we have decided to sell a few eggs at \$1.00 each, and as we will only spare 200 of these eggs this season, first come first served. We expect to hatch our Madison Square Garden winners from these eggs and you have an equal chance with us.

Why not place your order with the man that breeds the winners for some of the best shows in this country and the only breeder that has confidence enough in his stock to ship them C. O. D., which is the only fair way to buy high-class show birds of anyone? Nuff said.

Z. D. STRUBLE

Edgemont Poultry Farm

W. O. Chase

Box B

Hillsboro, Illinois

PITTSFIELD BARRED PLYMOUTH ROCKS

still further clinch their claim to be the Leading Exhibition-Utility Strain of this country by winning at Boston, 1910, 1st cock, 2nd hen, 5th cockerel, 3rd pen fowl, and 1st exhibition pen chicks; also special for best cock and four hens and five other specials including A. P. R. specials for best cock and best pen.

Our strain has won its way to the front strictly on its merits. THE NAME PITTSFIELD STANDS FOR QUALITY.

Our stock is strictly up-to-date and is rich in strong, vigorous breeding qualities, especially suitable for foundation stock and new blood. The results our customers have had with our stock warrant your confidence in placing your orders with us. Your satisfaction is the key to our success.

Do not confuse our strain with other leading strains. We breed practical, profitable bred-to-lay Utility Stock, as well as show stock, and make a specialty of supplying utility breeders with new blood. Our utility stock is bred for color and barring as well as for eggs, and in this respect excels all other strains in this country.

Our facilities for handling orders for Hatching Eggs and Day Old Chicks are unequaled by any other Barred Rock plant in the world and enable us to ship all eggs, carefully packed in excelsior, so they are sure to reach you in a strictly fresh and hatchable condition. We expect to make good any unreasonably poor hatches. Our wide experience in handling the day-old chick business and our facilities for hatching insure you a delivery of healthy, vigorous chicks, and our record long distance shipment of 2,600 miles testifies to the vitality of the stock. The successful shipping of chicks is a matter of experience, and we offer you our experience and the best quality of chicks at a reasonable cost. Every bird in our breeding pens this season is a carefully selected breeding bird which is a guarantee to you of good results.

OUR EXHIBITION MATINGS this season will include all of our Boston winners and eggs will be sold from the same at the same price as previous seasons, although our winnings this year warrant higher prices. As the matings are small, the number of eggs available will be limited and it will be necessary for orders to be booked ahead. We shall issue, about February 1, a detailed list of special matings which will be mailed on request.

PRICES OF EGGS—Utility, \$1.50 per 13; \$4.50 per 50; \$7.00 per 100; Exhibition, \$4 per 13; \$12 per 50; \$24.00 per 100

PRICES OF CHICKS—30 cents each; \$6.00 per 25; \$10.00 per 50; \$15.00 per 100

BREEDING BIRDS SHIPPED ON APPROVAL

We have for sale a few choice cockerel bred males, including some of our winning cockerels and cocks, excellent breeders, an exceptionally nice lot of pullet bred males, and a limited number of cockerel bred and exhibition females, all at prices low for the quality. We have a very choice lot of utility cockerels this year, price \$5 each. They are worth the money and the only kind profitable to buy. We guarantee them satisfactory. We appreciate our customers' orders and endeavor to handle them in a live, up-to-date business manner. Remember, all of our time, effort and intelligence is devoted to this one breed, both utility and exhibition. This means something to you. Write for free illustrated catalog. Address

Duston's White Wyandottes

lead the world! Do you know that my stock has been at the top since 1896? It's good to place a few of these things in your mind. At Boston, the home of the best White Wyandottes in the land, I won as a new man in 1896, 1st Ckl., and 3rd Pullet. In 1897 I won 1st and 6th Hens, 4th and 6th Pullets. 1898 I won 1st Cock, 6th Hen, 4th Cockerel, 1st, 3rd, 4th and 6th Pullets, 1st and 3rd Pens. 1899 I won 1st and 2nd Cocks. 4 C's on Hens 1st and two C's on Cockerels 2nd and two C's on Pullets and three C's on pens, a pen of my strain winning 1st. 1st Cock and 2nd Pullet each winning 1st at New York that same year. It was my work, writing and advertising that placed the White Wyandottes where they are in the world today, as Theo. Hewes and others have said, "Duston, you have done more than any other man for the White Wyandottes." Now, one tires of Ancient History, although these birds were the foundation of hundreds of flocks throughout the country from which the flocks of today are largely made up. I have been winning almost continuously at Boston and New York since '96. The three continuous showings as follows have never been equaled by any breeder: At New York against all the best birds that could be bought on either side of the line, January, '07, 2nd Cock, 1st Hen, 2nd Cockerel, 3rd Pen, N. W. W. Club Best Hen \$25.00 Special and many others. *First Display.* December, '07, 1st Cock, 4th Hen, 5th Pen, N. W. W. Club Special best Cock and others. *Second Display.* '08, 5th Cock, 2nd Hen, 4th and 5th Cockerel, 1st and 3rd Pullets, 2nd Pen. Special Shape Male, Special Color Male. Seven other Specials. *First Display.* A record never equaled by any other breeder.

I have some elegant birds for showing and breeding. I guarantee to please you. My matings will surpass any I ever had and my customers should raise winners from my eggs as well as myself. Send 10c for illustrated catalog to the breeder who can honestly subscribe himself as the breeder who has made possible these greatest and best flocks.

Arthur G. Duston, Box 1020, South Framingham, Mass.

Mr. Briggs, of the Pittsfield Poultry Farm Co., Pittsfield, Me., showed a string of Barred Rocks at Boston that would satisfy the most exacting Barred Rock crank that they have the quality he has been looking for.

Better send in that ad for March. The prospects never were better for a big egg trade. If you have anything to sell let the people know it by advertising in the American Poultry Journal.

Do you advertise in American Poultry Journal? If not, why not? "We lead, others follow."

Tannenbaum Farms, Willoughby, Ohio, purchased the second cockerel and second pen of Columbian Wyandottes at the late New York show. These, added to their already long list of prize winners, puts them in grand shape to supply the best to be had in this variety.

Have you seen the "Hoover Quality" Barred Plymouth Rock? They are the kind that win and produce winners. Better write W. H. Hoover, Palo, Ill., for full particulars, and mention American Poultry Journal.

H. Burkholder, Clyde, O., the Barred

Rock specialist, reports winning 1st and 2d cockerel, 2d hen, 4th cock and 2d pen at the late Columbus, Ohio, show. He has plenty of good stock for sale.

J. P. Keating, Wistboro, Mass., breeder of Columbian Wyandottes, has birds with a record behind them. Look up his large ad in this issue.

The Rockandotte Farm, Southboro, Mass., W. R. Graves, prop., is making a grand record at the large shows this season. But this is to be expected, for they have the quality.

AT BOSTON.

J. W. Andrews of Dighton, Mass.—White Wyandottes at Boston show, 1910, when the White Wyandotte class was unquestionably the strongest in quality ever shown in America, most especially the cockerel class. Won 1st, 2d and 6th cockerel; 1st pen (young), 5th hen, and specials for best shaped male and best pen. His first cockerel, as one breeder said, was a bird in a thousand, and no such finished back and tail was ever shown, and he was certainly a bird of curves. This is Mr. Andrews' thirteenth year showing at

Boston, and he has never failed in all that time to win. He has won 1st pen now the last four years he has shown and has had the coveted prize of first cockerel in 1907 and 1910 and owned the 1908 first cockerel. He also bred the first cock at the 1910 show.

I do not think this record on White Wyandottes was ever equaled by any breeder in America.

The string of six cockerels shown at Boston this year was certainly a revelation to the breeders, and three of them landed winners and the other three were birds that could win in any ordinary class, not being but slightly outclassed by the winners.

At the Chicago show just passed Mr. Andrews sent four birds unattended, and after their long journey won a prize on every bird and color special. His mating list is free to all, and any one interested in White Wyandottes should send for it.

CHICAGO WINNERS.

At the late Chicago show Dillon & Bell, 4108 Colerain Ave., Cincinnati, Ohio, exhibited Golden and Columbian Wyandottes and won, on Golden, 1st cockerel; 3d and 4th cocks; 3d and 5th hens; 2d pen; \$5 special for four best cocks; \$5 special for four best hens, and several other specials. Columbian Wyandottes, 2d hen and sweepstakes special. This firm has been breeding Golden and Columbian Wyandottes, R. and S. C. Rhode Island Reds and S. C. Buff Orpingtons for a number of years, and never fails to win a good share of the blue ribbons wherever it exhibits, and this season has been no exception. They have an exceptionally fine lot of birds in their breeding pens this season, which are mated to produce winners. Any one who favors them with an order is assured of fair and honest treatment. Write for mating list and mention American Poultry Journal.

A 50 EGG BUCKEYE INCUBATOR

with lamp and complete outfit ready for hatching—guaranteed to hatch every hatchable egg. Our 50-Egg Buckeye is a simple, self-regulating, latest-improved machine. Hatching quality backed by a 40-day free trial or money back without dispute. 10,000 sold last season, on this guaranty, and not one returned. Larger sizes on same guaranty and at correspondingly low prices.

"Anybody can hatch Chickens with a Buckeye"

Twenty years on the market. 100,000 in successful operation. Every reader of this paper, who keeps chickens, should send for our poultry books telling how 51 chicks were hatched from 50 eggs, and "Making Money the Buckeye Way."

Buckeye Incubator Co., 1313 Innisfallen Ave., Springfield, Ohio

DAY-OLD CHICKS FREE

We are giving as premiums thousands of Day Old Chicks from choice Standard Bred Stock. We are advertising these to introduce the best twenty-five cent poultry journal published. A few hours' work is all that is required. Particulars free.

POULTRY POST

GOSHEN, INDIANA

Lamon's Northern Raised White Rocks

"THE HARDY KIND"

Raised in this northern Adirondack country have the constitutional vigor which has produced the most beautiful plumage on any strain of White Plymouth Rocks in the world today. Hence the name, "The Hardy Kind."

My Fourth Prize Pen Cockerel at Boston, 1910

will be mated to four females extra large in size, chalk-white in color, bright red eyes, rich yellow legs, low, even serrated five-point combs, full deep breasts and long, broad backs with low-carried, well-spread tails.

EGGS from this superb mating \$10 per 13 straight; other extra quality matings, \$5 per 13; \$9 per 26.

I am the Originator of the Rose and Single Comb Buff Bantam and will spare a limited number of eggs from these little beauties at \$10 per 13. Send for my circular and list of testimonials of satisfied customers.

Harry M. Lamon : Box H : Adams Center, New York

Columbian Wyandottes

Line-bred for ten years. I originated and bred the "Challenge Strain" Light Brahmas twenty years ago and now give my customers in my CHALLENGE STRAIN COLUMBIAN WYANDOTTES, the benefit of my long experience in breeding and producing the markings demanded for Columbian Wyandottes by the latest Standard of Perfection. Their record at

New York and Boston For Two Years

in the keenest of competition at these two leading shows prove that Keating's Challenge Strain leads all others. NEW YORK, 1909-10—2d and 4th cocks; 2d hen; 2d and 3d cockerels, and silver cup for best display. BOSTON, 1910—First cockerel; first and fourth cock; third, fourth and sixth hens and sixth pullet; also silver cup for best cockerel; special for best display, special for best cock and fourth hen, special for best cockerel and fourth pullet, special for best shape male, and special for best colored male.

EGGS! EGGS!! From pens headed by first prize cockerel at Boston, 1909, and first prize cockerel Boston, 1910, \$10 per 15, the run of the two pens. Selected from one pen, \$15 per 15. I am breeding three other yards equally as good headed by males that were winners at New York or Boston, and every female has won or direct from New York or Boston winners, at \$5 per 15; \$10 per 45. Some grand exhibition and breeding birds for sale at reasonable prices, quality considered.

All stock and eggs guaranteed as represented. Mention American Poultry Journal when writing.

J. P. Keating, :: Westboro, Mass.

Burhans' "Quality" Exhibition Barred Rock Matings Will Breed Still More Champions IN 1910

There is not room in this advertisement to tell you all about my matings for 1910, but I have prepared a catalog of sixteen pages, profusely illustrated with half-tones made from actual photos of my birds right here in my yards, which I will send you if you are really interested in better Barred Plymouth Rocks. It will tell you how to know the sire and dam of every chick you raise, how I breed the winning kind of exhibition cockerels, how I produce those snappy colored males that breed on in future generations, how I mate my birds, how to mark your chicks, how to select your best cockerel bred females, how to choose your best pullet bred cockerels, how to select breeding cockerels that will stamp their likeness on their chicks and produce said males, how I pedigree my chicks, how to get the most out of a setting of eggs, how to breed heavy layers and work for fertility and vigor, as well as giving a lot of information on how I have attained such wonderful success with "Quality" Barred Plymouth Rocks.

EGGS this season, \$4, \$5, \$7, \$10, \$15, \$25 and \$45 per setting. Write early for the catalog, for I have but a limited number. Stamp is appreciated.

Amos Burhans

Breeder of "Quality" Cham-
pion Barred Rocks

Box A, Waterville, Minn.

"ARISTOCRAT."

This is the name of the strain of Barred Plymouth Rocks bred by W. D. Holterman, Ft. Wayne, Ind., the man who produced the celebrated male bird

which he built his now celebrated strain of Aristocrats, which now represent the highest degree of perfection possible to obtain in America's leading variety of thoroughbred poultry.

Mr. Holterman has been a steady ad-

fair and honest treatment, and it is on these lines that he has built his business and reputation.

This season he has mated up the grandest lot of birds he ever owned, and is now prepared to fill all orders promptly and with his usual care. He can help you improve your present stock or start you right with his strain of Barred Rocks. Write him for catalogue and mating list, and mention American Poultry Journal.

RHODE ISLAND REDS.

In this issue will be found the advertisement of Red Cloud Poultry Farm, R. B. Bretz, prop., El Reno, Okla., who makes a specialty of breeding Rhode Island Reds. At the recent show held at Enid, Okla., where there were 5,030 entries, his exhibit and winnings were the sensation of the show. On Single Combs he won first on Single Comb pullet; color special; second highest scoring bird in the show. On Rose Comb, 3d cock; 2d cockerel; 1st, 2d and 3d pullet; also several specials.

He has mated up several grand pens, each one headed by a prize winner, and is prepared to supply eggs that will produce Reds that are up to standard requirements. Send for his mating list and mention American Poultry Journal.

Willard J. Thorniley, Marietta, Ohio, the Ancona specialist, made a grand winning at the late Marietta show as follows: First, 2d cocks; 1st, 2d, 3d, 4th cockerels; 1st, 2d, 3d, 4th pullets; 1st, 2d, 3d, 4th hens; the Honorable George White silver cup, value \$50, for largest and best display. Third and final year for winning this prize. Ancona cup for best pen of Anconas, and the association cup, value \$30, for the highest scoring pen in the show. Judged by W. C. Pierce. This record stands unequaled. Write for prices and particulars and mention American Poultry Journal.

T. A. Faulds, London, Ont., Canada, reports winning the following prizes on his Black Minorcas at the late Boston show: Single Combs—Cocks, 1st, 2d; hens, 1st, 2d, 3d, 4th; cockerels, 1st, 2d, 3d; pullets, 1st, 2d, 3d, 4th. Rose Combs—Cocks, 2d, 3d, 4th; hens, 1st, 3d; cockerels, 1st, 2d, 4th; pullets, 2d, 3d, 4th, 5th, and all specials. He also sold the eggs that produced the first prize Rose Comb cock at this show. Can you beat this record?

Cockerel heading first pen at the great Missouri State Show, at St. Louis, December, 1909. Also first cockerel at Illinois State Fair, Springfield, October, 1909. Now heading a breeding yard at Pleasant View Poultry Farm, Millersville, Ill. Bred, owned and exhibited by J. A. Bickerdike, Box A, Millersville, Ill.

"Ringy," which was probably the greatest Barred Rock ever produced in the west. This bird was the foundation on

vertiser in these columns for a number of years, during which time his numerous customers have received from his hands

EGGS OR DAY-OLD CHICKS : : BUFF, BLACK AND WHITE : : **ORPINGTONS**

Madison Square, Chicago, Indianapolis, Cleveland and Cincinnati first prize winners. All infertile eggs replaced free. All dead chicks replaced by live ones. Send today for our large illustrated Mating list, giving prices on eggs and chicks from prize winning and utility pens, free.

WILL H. SCHADT, GOSHEN, IND.

HARRY W. LAMON, ADAMS CENTER, N. Y., SPECIAL REPRESENTATIVE OF THE AMERICAN POULTRY JOURNAL.

Mr. Harry W. Lamon, Adams Center, N. Y., will represent the interests of the American Poultry Journal as special representative in the eastern territory. Mr. Lamon will be remembered by the old-timers in the poultry fraternity as a breeder of Buff Leghorns and Barred Rocks, dating back to 1892, having produced for a number of years the Single Comb Buff Leghorn, winners at

New York and Boston shows. He was afterwards manager of Willowbrook farm, Burlington, Conn., which he successfully managed, placing this plant on a plane where it had never before been because of his extraordinary ability as a breeder of high-class poultry.

Mr. Lamon for many years has been a judge of all varieties and officiated at many of the leading shows in the East. He is unquestionably well qualified to represent the interests of the American Poultry Journal, being very conservative and conscientious in his work. He will contribute articles to the American Poultry Journal in which will be embodied the practical knowledge which he

has gathered from his many years of successful production of fancy poultry, and we are sure our readers will receive nothing but thoroughly practical knowledge from his pen. Articles may be expected in the near future on mating, incubation and rearing of chicks. We are well pleased to have added such a valuable man to the staff of the American Poultry Journal representatives.

Above all things, the beginner should form the habit of associating with old breeders and reading all of the best poultry magazines possible.

Rudy's Perfection White Wyandottes

Just from Missouri, where we did show them sure enough. Now I am going to show you the quality of my "Perfection" Strain that can be found in my breeding yards this season. My type of White Wyandottes is known all over the world as being as near Perfection as has ever been produced, and winners in most any of the best shows can be traced to my

"Perfection" Breeding

My records, at Chicago, December, 1908; Peoria, Ill., November, 1908, and Kansas City, Mo., January, 1910—the Madison Square of the West—will long stand unequaled. At these shows (the last three shown in competition) they won all the Blue Ribbons—15 out of a possible 15. At Chicago: 1st, 3rd, 4th cock; 1st, 4th, 5th hen; 1st, 2nd, 4th cockerel; 1st, 2nd, 5th pullet; 1st, 2nd pen. Silver cups and specials for best display. At Peoria: 1st, 2nd, 3rd, 4th, 5th cock; 1st, 2nd, 3rd, 4th, 5th hen; 1st, 4th cockerel; 1st, 2nd, 3rd, 4th pullet; 1st, 2nd, 3rd pen. All specials, including President's \$50 silver trophy cup for best display, all varieties competing. At Kansas City, 1st, 2nd, 3rd, 4th cock; 1st, 2nd, 3rd, 4th hen; 1st, 2nd, 3rd, 5th cockerel; 1st, 2nd, 4th, 5th pullet; 1st, 4th pen. Specials: The Weekly Kansas City Star's \$150 silver trophy cup for best bird in the show, all varieties competing. The Schmelzer Arms Company's \$50 silver trophy cup for best display, all varieties competing. All the above prize winners (with one exception) can be seen in my breeding yards this season, as I wish to give my patrons good value in eggs for hatching.

Why delay placing your orders? DO IT NOW, that the "Early Bird" may "Catch" the Ribbon. Have your orders booked early and be assured of prompt delivery. Fifteen grand pens. Mated for the Egg Trade, including all my prize winners. Eight of them headed by the best sons of "Perfection," the greatest living White Wyandotte sire. Prices of eggs: As they run (i. e., eggs from all pens), \$5 per 15; \$9 per 30; \$12 per 45; \$24 per 100. From pens of your own selection, \$10 per 15; \$18 per 30; \$25 per 45. Utility and incubator eggs (from surplus stock I carry over for next season), \$3 per 15; \$5 per 30; \$7 per 45; \$12 per 100.

Don't forget that my "PERFECTION" STRAIN is noted for Great Egg Production. Write for Egg Circular and Mating List. A few choice breeders yet for sale. Prices on application.

THE LAKESIDE MAISON DORE COMPANY

AT NEW EGYPT, OCEAN COUNTY, NEW JERSEY

Incorporated Under Laws of New Jersey--Buildings and Improvements Are Already Under Way

THE OBJECT OF THE COMPANY—To erect a hotel on the lake front of the sixty acres of ground which the company already owns, a 200-room Inn and other buildings. THE CUISINE WILL BE FURNISHED by the Poultry and Farm Department, thus assuring the company both the retailer's and wholesaler's profits. STABLES, GARAGE, ICE HOUSE, GAS PLANT, and other buildings and enterprises that charter covers are being erected.

THE LAKESIDE POULTRY FARM

with housing capacity of 5,000 hens and 12,000 incubating capacity and colony houses for the accommodation of 50,000 chicks. WELL ESTABLISHED AND PROFITABLE BUSINESS of the Glenolden Poultry Yards which had the reputation under the management of Howard L. Davis to be one of the most successful plants in the United States; also the ESTABLISHED BUSINESS OF POULTRY SUPPLIES, including Fireless Brooders, Trap Nests, Davis Pemican Powder, Davis Germ-Acid, Davis Head Louse Salve, Davis Moisture Gauge, etc. A FARM AND ORCHARD will be a valuable asset to the company. THE EGYPTIAN THEATRE is already a grand financial success.

THE PROSPECTUS NOW READY, and contains full particulars, details and objects of the company. Send for one at once.

Howard L. Davis, Pres. : New Egypt, New Jersey

NOTES ON YOUNGSTOWN, OHIO, SHOW.

This show can justly lay claim to the pennant for the quality show of the year, for with the exception of but few classes the winners shown were capable of landing places anywhere in this country, and many unplaced birds here could win in a large number of shows. Liberal regular premiums and specials helped to make this show, though many of the larger breeders came on account of the meeting of the Ohio State Branch of the American Poultry Association, and the meeting of the State Branch of the Rhode Island Red Club. Charles Melare presided over an enthusiastic meeting of Ohio members of the American Poultry Association. The branch is a large one, having taken in about thirty new members the past year. The finances are in good shape, and the branch is planning some good missionary work for poultrymen of Ohio the coming year. The old legislative committee was dissolved and a new committee of one appointed to act with the State University in an endeavor to

procure an appropriation of \$25,000 from the State for the establishment of a department of poultry husbandry at the State University. The branch extended a vote of thanks to the Mahoning Poultry Association for the courtesies extended to the visiting A. P. A. members.

Barred, White and Buff Rocks were comparatively small classes. This section is a perfect hotbed of White Wyandotte enthusiasm, and the class at the show was the strongest the writer has seen outside of New York and Chicago. Any ribbon won at Youngstown in White Wyandottes entitles the winner to a place among the White Wyandottes "200." Mr. F. D. Sutton, of Youngstown, was the best winner in the class, taking first cock, third cockerel, second hen, first and second pullet, first and third pen, National White Wyandotte Championship Cup for best display, Silver Medal for best cock, hen, pullet and pen, and seven other silver cups. We understand that a winning Chicago cock was one of those defeated by Mr. Sutton's first cock. His first pullet and second hen are remarkably typical birds. Mr. Sutton was a good winner last year at this show, and his repeat proves him to be entitled to a front place as a breeder. We unhesitatingly recommend buyers to Mr. Sutton. He also won third cockerel, first and third pullet in White Orpingtons on three birds unusual for their good color and the first pullet a splendidly typical specimen.

F. D. Hawn had some of his stock represented in the winnings, though he did not exhibit as an individual. Everybody knows the quality that this popular secretary of the National White Wyandotte Club breeds. He was at the show every day making more friends.

W. D. Carroll, Youngstown, is always a good winner in White Wyandottes at this show, for he certainly has the goods. This year he won third hen, third pullet and fifth pen, a splendid win in this class. Dillon & Bell came all the way up from Cincinnati and won right down the line, taking second cock, fifth hen and fifth pullet in

this big class of White Wyandottes on their fine birds. In Golden Wyandottes they won first cock, first hen, first cockerel, first pullet and first pen, all National Golden Wyandotte Club Specials. In Columbians they took first cock, fourth pullet and fifth cockerel. In S. C. Reds they won third cock, fourth hen. In R. C. Reds, fourth hen. In S. C. Buff Orpingtons they won first cock, first and second hen, third and fifth pullet and two Buff Orpington Club ribbons on top of their Cincinnati and Chicago winnings this winter. This gives them a record obtained by few breeders and speaks volumes for the quality they breed.

In what was undoubtedly one of the strongest classes of Rhode Island Reds gotten together this winter the winnings here will count big. It was the occasion for the annual meeting of the Ohio State Branch of the Rhode Island Red Club. Judge Chester Tompkins stated that the class brought out was equal in quality to those at New York and Chicago this winter. In fact some winners from these shows were on hand at Youngstown and had hard work to hold their own. Ira M. Crowther, Willoughby, was re-elected president of the branch and was the best winner in single combs, taking first, fourth and fifth cock, fourth and fifth cockerel, fourth pullet, second and fourth pen and Ohio Cup for best display, special for best shaped male, club special, \$15 gold, for best display; \$20 cup for best display; cash special given by Ohio Branch for best cock and pen. Mr. Crowther has strong Red type in both sexes and is accounted one of the leading breeders of this variety. It takes unusual quality to win as he did in such a class as this.

White Crest Farm, H. C. and C. M. Sixt, Westpark, Ohio, breeders of Single Comb White Leghorns and White Wyandottes, report: At the late show at Westpark, Ohio, they had some 250 entries, and Judge Charles McClave said the quality shown there was very good. The Sixt Bros. won the silver cup for best display of White Leghorns, also silver cup for ten highest scoring birds in the show. Nine of their birds scored ninety-five each and three ninety-five and one-half points. They had some twenty-five birds that scored about ninety-four points. The Sixt Bros. have been breeding for many years, and their winnings include some of the larger shows, such as Cleveland, Ohio. They report plenty of stock in each variety yet for sale and eggs in season.

Frank W. Mains, Morris Plains, N. J., breeder of Mottled Anconas, made an exhibit at the late Madison Square Garden show and won 3d cock; 3d, 5th hens; 2d, 5th cockerels, and 1st, 5th pullets in one of the largest classes of this variety ever gathered together at this show. All his stock is raised on free range and are therefore strong and vigorous. He is offering some special bargains in cockerel and breeding pens. Write for prices and mention American Poultry Journal.

Minorea Range, Big Rapids, Mich., reports the following winnings at the late Jackson, Mich., show on his young stock: Cockerel, 1st, 3d and 4th; pullet, 1st and 4th; pen, 1st. This will entitle them to three medals, two club ribbons, an American Poultry Association diploma, besides the regular prizes and ribbons.

The Biggest Profit in Poultry Raising

"Begin With Strong, Sturdy Chicks"

You may select your eggs from strong stock, but they will never "make good" if the eggs are not properly hatched and the chicks brooded properly—using Model Nutrine Chick Salts from the start. Use this free catalog as a guide. It is a practical poultry book.

FREE

Model Incubators, Brooders SUPPLIES AND REMEDIES

RAISE MORE POULTRY

Let us send you our free book on Practical Poultry Keeping. This book tells you of the Opportunities in the Poultry Business; How to Choose Location; Build Your Houses; Hatch and Raise Strong, Healthy Ducks, Chicks, etc.; Foods; How to Recognize and Prevent Diseases, etc., etc. Also a complete descriptive catalogue of the well known MODEL incubators, brooders, Remedies and Supplies. Remember that a few extra dollars paid for quality is money saved in the end. Testimonials from Experiment Stations and individuals show that Model goods give satisfaction under all conditions. Write for the book today.

MODEL NUTRINE CHICK SALTS

A carefully prepared and evenly balanced mixture for the various inorganic Earth Salts necessary for the proper development of the baby chicks. Prevents loss from bowel trouble and indigestion. All chicks may be bright and strong when hatched, but after a few days some of them commence to droop, get plastered up behind and soon get starved or trampled to death by the stronger chicks. Ask for descriptive matter that explains how Model Nutrine Chick Salts are used with proper food mixtures to prevent loss and insure largest percentage of strong, healthy chicks. Don't miss it. Write today.

Model Incubator Co., 101 Henry Street, Buffalo, N. Y.

QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Question.—(1) Which are the best layers the whole year around, counting the winter months? The Rose Comb Black Minorcas or the S. C. Black Minorcas? Rose Comb R., Island Reds or the S. C. R. I. Reds? (2) What kind of chickens are counted as best layers? (3) Would it ruin a flock to breed a cock that has a side spring? (4) How ought a Minorca be marked, a Barred Rock, Brown Leghorn, Light Brahma, Buff Orpington and a Buff Leghorn? Sidney, Ohio.

M. H. J.

Answer.—(1) The different combs make no difference in the egg production. (2) This is a rather delicate subject, as some breeders claim one and other breeders another; but we are of the opinion that the Leghorns are the best layers. (3) The chances are that it would so far as exhibition specimens were concerned. (4) See American Standard Perfection for description of these varieties. Price of Standard, \$1.50. For sale by American Poultry Journal.

Question.—I would like to drop you a few lines in regard to an ailment of my chickens of late. I have had two chickens, one rooster and a pullet of this year's hatch get something the matter with one side of their head. It

all swells up so as to completely destroy the sight of the eye. I have looked up one of your poultry books on that and the nearest I can see to it is "sore head," of which it says to use carbolated vaseline. I did that and have also used coal oil and lard, but to no avail. It does not seem to get better; finally going to the other side, making the chicken totally blind and then there is nothing else to do but kill them.

Spokane, Wash.

Mrs. J. M. H.

Answer.—This is roup in its worst form and is almost impossible to cure when it gets to this stage. These birds should be isolated and the premises thoroughly disinfected with a 10 per cent solution of carbolic acid. The sick fowls should be placed in warm, dry quarters and fed on soft feed. As a medicine, procure some one of the various roup cures advertised in these columns and give as directed.

Question.—Which is the best form of roosts for poultry; round or flat?

Bonnot Mills, Mo.

P. S.

Answer.—We consider the best roosts are made from 2x2 scantling, with sharp corners rounded off slightly.

Question.—(1) Can you tell me the cause or causes of hens dropping soft

shelled or premature eggs around coop while roosting at night? (2) Will a cockerel mated to pullets or hens produce eggs that will hatch as strong chickens as if a cock were mated to the pullets and hens? G. E. T.

Missoula, Mont.

Answer.—(1) This is due to either a lack of shell-forming material or to inflammation in the egg passage. See that your fowls have plenty oyster shells before them at all times. Also feed them liberally of wheat bran and green food. (2) That depends on the vigor of bird. If the cockerel is well matured and vigorous eggs will be fertile.

Question.—(1) How to line breed, to produce and maintain a good strain, without introducing new blood? (2) Will clover hay make good litter? Will it need to be cut, or remain whole? What makes the best litter? (3) What is the best grit on the market?

Fallston, Pa.

W. E. H.

Answer.—(1) Answer to this would take too much space in this department. See our book, "Why Poultry Pays and How to Make It Pay." Price only 50 cents. (2) Clover hay makes a very good litter; but we prefer a good quality of oat straw. (3) You will find any of the grits advertised in these columns to be O. K.

Question.—(1) How can I tell the age of poultry in any particular way? (2) Are there any rose combs in the breeds of Leghorns and Minorcas? (3) What is the best feed for fattening? (4) Are 14 hens too many with one

BRED AND OWNED BY

Office: 2835 S. W. Blvd., Kan. City, Mo. **Rosedale, Kan.**

White Plymouth Rocks

In a large class at the late Milwaukee show I won 1st pullet, 3rd cock, 4th cockerel, and 7th hen. Have been breeding and exhibiting White Rocks for past ten years and am now prepared to supply extra choice eggs from prize-winning pens at \$3 per setting. Until March 20, incubator eggs \$6 per 100. I guarantee satisfaction. Place your order now. Mention American Poultry Journal.

W. R. Abbott - Fort Atkinson, Wisconsin

White and Buff Rocks

winnings at St. Louis, December, 1909, Buff class of 300. First cock, first hen. Madison Square Garden, New York, 1909 and 1910, third hen. White Rocks at Detroit, January, 1910, first, fourth and fifth cock. Third and fifth hen. Fifth cockerel. Also second pen. Eggs, \$3 and \$5 per fifteen.

CADILAC POULTRY FARM, W. J. H. GOETZ, 1150 CADILAC AVE., DETROIT, MICH.

ORPINGTONS

of the better sort. Buff, Black and White at New York Madison Square. We won on three entries of Blacks, 1st pullet, 4th cock, 4th hen. Silver cup best Orpington hatched in 1908. The first White Orpington pen hatched from one setting of our eggs defeated seven pens from the largest breeders East and West. Doesn't this prove to you that we have the birds and can mate them to produce results. We breed our winners and sell you eggs from winners that will produce winners. Eggs, \$3, \$5, \$7 and \$10 per setting.

Mountain View Farm : R. F. D., South Kent, Conn.

BARRED PLY. ROCKS

The Kind It Pays to Breed

I have for sale a number of cockerels, both pullet and cockerel bred, that I picked out to sell at from \$6 to \$15 and give good values. To move them and get my strain among the people I am offering them at \$5 each while they last. Not more than one pullet bred and one cockerel bred cockerel will be sold to one person.

Eggs For Hatching

I am offering eggs from four pens of standard colored females, scored 91 to 93½. I have these birds properly mated to males with as many good points as will be found in any pullet bred male. Settings from these birds will be filled from either pen. Their total score being about the same. Within a very small fraction of 92 on an average of forty females.

In cockerel matings I have two males scoring 92, two 92½, and one 93. Properly mated to females which are a credit to the breed. Settings from these birds will be filled five eggs from 92-point birds, five from 92½-point birds, and three from 93-point birds. One setting \$4, two \$7, three \$9. Either mating. Place an order with me and get entire satisfaction. I guarantee it. Write for mating list and mention American Poultry Journal.

T. J. Carter, Box Z, Jonesdale, Wis.

rooster? (5) Where can I get a book on the diseases of poultry and how much would it cost? (6) Do you think that oats are better than cracked corn for laying hens? Please answer as soon as possible and oblige, S. C. Lowell, Mass.

Answer.—(1) This is a difficult matter and can be done only by the experienced poultryman. (2) Yes, in all varieties. (3) A mash feed made of corn meal and shorts and mixed with sweet milk. (4) Not if he is a vigorous bird. (5) Dr. Salmon's book, "Diseases of Poultry," is probably the best book of this kind published. Price 50c. For sale by American Poultry Journal. (6) Yes.

Question.—Let me know in your next issue what is the cause and cure of my Buff Orpington pullet going blind. She seems in good health. Has a good appetite. Would a hen like this be fit to eat? G. B. Burnham, Pa.

Answer.—We cannot tell unless we had more details. Would not advise the use of a fowl in this condition for the table.

Question.—(1) I can dispose of a quantity of fresh blood from the butcher, one or two hours after the slaughter of the animal. How can I convert that blood into powder to be used as a food for my pullets? (2) What do you mean by "middlings" in reference to poultry food? (3) What do you mean by the term "roaster?" By the term "broiler?" L. T. N. Galata, Constantinople, Turkey.

Answer.—(1) We are not familiar with the process, but it is dried by application of heat to the fresh blood, after which it is made into what is known as blood meal. (2) Middlings can be procured at any grist mill and is a portion of the wheat kernel that is separated from the flour and bran in the process of making flour. (3) "Roaster" is a young fowl weighing from 2½ to 4 pounds. The "Broilers" are chickens from 6 to 8 weeks of age and weighing from 1 to 2 pounds. These are terms used by the market poultrymen.

Question.—What do you think of concrete floors for chicken houses?

Adams, Neb. J. M. B. Answer.—If properly constructed, there is nothing better. In putting in a concrete floor there should be from 6 to 8 inches of cinders put in before concrete is laid. This will avoid dampness. After floor is laid it should be allowed to dry, after which litter to the depth of 6 to 8 inches should be kept on at all times.

Question.—(2) What breed of fowls would you advise me to start with as winter layers? (2) How should I build a house to be handy, warm and cheap? (3) How much floor space is required for a dozen hens and one rooster? (4) Should I divide into separate pens? (5) What incubator and brooder do you advise me to get? (6) How should I feed for eggs? (7) What kind of feed for broilers? (8) Can you tell me the most reliable breeder to buy from? Arleta, Ore. C. D. G.

Answer.—(1) Any of the American varieties, such as Rock, Wyandottes, R. I. Reds, etc. (2) Space will not permit us to give details here. Get our book,

"How to Build Poultry Houses," price 50c. (3) Six square feet of floor space should be allowed for each fowl. (4) Yes, from 10 to 15 in a pen. (5) We never say which is the best. They are all good and we guarantee all our display advertisers. (6) Good quality of whole wheat and oats, together with plenty of green stuff. (7) Get a copy of book, "Broilers for Market," price 50c. (8) We do not recommend one above another.

Question.—(1) How can a person keep a white chicken from becoming brassy? (2) At what age does a cockerel or pullet become a cock or hen? (3) Is it advisable to use a cockerel in a breeding pen with pullets? (4) Has yellow corn any effect on the color of white chickens? Does it bring out the brass (5) Is a brassy cockerel useless to breed from on account of brass. C. P. F.

Flanagan, Ill.

Answer.—(1) This can only be done by breeding from male birds that show the least brass in their plumage. It takes several years of careful breeding to get a flock of pure white birds. (2) At one year. (3) No. (4) We believe that yellow corn has a tendency to make white fowls brassy, although some authorities claim it does not. (5) Yes, if you are breeding for exhibition purposes.

Question.—(1) Will a cockerel make a good breeder that is standard bred and would score very high but has a crooked breast bone? (2) What is a Black Langshan hen worth that has a score of 96 points? K. W.

Jasper, Ind.

Answer.—(1) A bird with a crooked

breast bone cannot score very high, as it would be disqualified; therefore, it is of no value as a breeder. (2) Fifty to \$100.

Question.—I have 13 first-class R. I. Reds. I feed a mixture of wheat, barley, oats and cracked corn morning and night; would like to know about how

"BETSY."

First White Wyandotte pullet, Chicago, 1908. Bred and owned by George H. Rudy, Mattoon, Ill., whose birds are creating such a sensation in the West this season.

much to feed a day. I feed in a litter of leaves. I also feed dry mash of corn meal, bran, B. B. B. meal and alfalfa

meal. Please give quantity of each for best results for a daily ration. W. B.

Providence, R. I.

Answer.—This question is asked more often than any other and has never yet been answered satisfactorily, for the simple reason that no one can tell the exact amount of feed necessary for a given number of fowls. Some fowls eat twice as much as others, the same as the human race. A little over a pint of grain twice a day should be sufficient for 13 birds, providing they are fed mash once a day and a supply of green food. The proper amount can only be determined by results and close observation.

Question.—(1) Do the pure breed White Leghorns lay any brown shell eggs? (2) After a rooster has had the roup is he injured as a breeder?

Madison, Tenn.

A. S. J.

Answer.—(1) Leghorns should lay a pure white shelled egg, but they have been known to lay eggs with a light brown shell. (2) Yes.

Question.—In August and on December 31 I have had two pullets die of the same trouble. One was a Rock and the other a White Wyandotte. In both instances the symptoms were identical, so will only cite the last case for instance. I will find the pullet standing around very listless; will neither eat nor drink; feathers ruffled and no animation; head in good condition; no fever, but bowels are yellow and white liquid, but very scanty from no food. I treated them each time promptly for cholera with a gruel of condition powder. On the second day condition worse and bird dies of convulsions.

REDS

We offer you high class exhibition quality in S. C. Reds and mate our prize winners for best results, backed up by seven years of successful breeding. Eggs from our extra choice matings, \$8 per 15; \$15 per 30; regular matings, \$5. Some fine breeding males yet for sale. Special sale of trios for \$15 and pens at \$20. Write us today.

Odenheimer & Odenheimer

Lumberton, New Jersey

Andalusians

I have bred Andalusians nine years and in competition at the leading shows have won more firsts than all competitors. At the late Ohio State Show I won 1st cock, 1st and 2d hens, 1st cockerel, 2d and 3d pullet, 1st pen, on six single and one pen entries. Also won silver cup for best pen in Mediterranean class and silver cup for best male bird in Mediterranean, Asiatic and French classes.

R. C. Bantams

I breed both White and Black Rose Comb Bantams and deem it sufficient to call your attention to my winning all firsts at both Chicago and Toledo the same week on Blacks. In Whites I have the same quality. Stock and eggs.

Swiss Chard

Swiss Chard belongs to the beet family, the tops making a wonderful growth and can be cut repeatedly. Poultry is very fond of it. One ounce of seed will drill a 100-foot row and make green food for at least 100 hens. Price of seed, 10c per oz. Order direct from this ad.

MRS. J. W. HOLTON - CATASAUQUA, PENNSYLVANIA

Andrews' White Wyandottes

AT BOSTON, 1910

America's strongest White Wyandotte show, won first, second, and sixth cockerel, first pen (on young), fifth hen, special for best shaped male, and best pen. The cockerel class was the hottest ever shown. Have won first pen for four successive years, and never failed to win at Boston for thirteen years. A record never equaled by any breeder. At Chicago, 1909, on four entries won four prizes and color special. I breed my winners. Buy your breeders and eggs from a strain that has winning blood; they have won and still win America's highest honors. Send for circular.

Standard Rock Farm
TRUCKENBROD BROS., MENDOTA, ILL.

Teddy V, Our Second Prize Cockerel Chicago Show, 1908
Bred and owned by us

Answer.—You should have made an examination of the internal organs after death. Do not think it was cholera, as in this disease there is always a rapid rise in temperature and the symptoms given leads us to believe that the trouble was congestion of the liver. This disease is not noticeable until it has advanced so far that treatment is of no avail. It is caused by the fowls being too fat or by the eating of tainted or moldy food.

Question.—Which are the best layers, Single or Rose Comb Rhode Island Reds?
I. F. B.

Rochester, Pa.

Answer.—We do not believe there is anything to choose between these two varieties so far as egg production is concerned.

Question.—(1) I have 30 W. P. Rock pullets, hatched in latter part of March and early April. They are large and in good health. I feed them considerable sunflower seed, with bran, corn and oats and some of them began to lay August 22 and during September I got as high as eight and ten eggs some days. In November they moulted considerably and the egg yield fell off. I am now feeding a morning mash of equal parts clover meal, wheat, bran and hominy, to which I add a good hand grip of oil meal and half pint meat scrap. I feed mangles and other green stuff and corn and oats for grain in deep litter. I only get from five to eight eggs. They have plenty of room; also grit, charcoal, water, etc. Can you suggest better management? (2) Is it an advantage to get out pullets for winter laying earlier than during April?
J. F.

Chicago, Ill.

Answer.—(1) Moulting is what stopped the egg production. Too heavy feeding of sunflower seeds will cause moulting. Your system of feeding should produce eggs and probably will as soon as they recover from the effects of the moult. (2) No.

Question.—Can you give me a formula for chick feed?
L. S.

Worthington, Minn.

Answer.—No formula that we could give you would be as good as any one of the various prepared chick feeds now advertised in these columns.

Question.—(1) Which kind of poultry is the best to start in with? (2) Which kind of grain is the best poultry feed? (3) Are portable houses good to keep hens in.
L. A. M.

East Walpole, Mass.

Answer.—(1) We do not answer this question. Take up the variety you fancy. They are all good. (2) Wheat, oats and corn. (3) Yes, see ads. in this issue.

Question.—(1) What do you think of cotton seed meal as feed as an egg producer? (2) About how much mangle beets would it require to furnish sufficient feed for say 200 hens during the winter in Indiana and how is the best way to feed them? (3) I would like to know what was the matter with my incubator. I only got about one-third hatch last spring. It is not the eggs, for my eggs give about 80 to 90 per cent hatch under hens. I also got eggs from my neighbor that made about 95 per cent hatch for me, also those with hens. I used moisture in different

ways, but did not seem to help matters very much, if any. I set the machine four times and I aired out the machine and room about twenty-four hours each time and kept the lamp burning to hold the heat up as much as possible so it would drive out the odors from the machine. This was the third season for it. It was not disinfected any, only aired, as above stated. (4) How heavy should goods be for poultry house curtains? Would something like bed sheeting do for outside use if oiled with linseed oil, or would medium weight bed ticking be better or 8 ounce duck?

Sandborn, Ind.

C. D.

Answer.—(1) A small quantity of cotton seed meal may be fed to advantage. (2) Twenty-five bushels. They are best fed raw. (3) The difficulty must have been in your method of operating the machine. You either cooled your eggs too much or not enough. Care should be taken in this respect. By frequent testing of the eggs you can very easily determine whether the eggs are drying down too rapidly or not fast enough. (4) A good quality of unbleached cotton makes a good curtain. This can be oiled or not as occasion requires.

Question.—Will you please tell me something about white feathers in Golden Wyandottes? Are white feathers a common thing in this breed?

Pineknayville, Ill.

D. O. M.

Answer.—White feathers in the wings of parti-colored birds are becoming more rare each season, as the breeders are gradually breeding this defect out, although it is permitted by the Standard, in some varieties, the time is not far distant when any feather foreign to the variety will not be permitted and will very rarely be found. White feathers in the wing of a Golden Wyandotte is a serious defect but not a disqualification.

Question.—(1) Is it practical to equip incubator with gas instead of oil lamp? (2) For the poultry business in this vicinity how and when would the poultry and egg best be marketed for best profits? (3) At what age is it most profitable to dispose of hens? (4) How is best method to keep record and designate in order to know the age of your fowls. Yours truly,

Vinita, Okla.

S. M.

Answer.—(1) Yes. (2) Your nearest large city. (3) After the second laying season is over. (4) By marking in the web of the feet and keeping a record of the toe marks in a book.

THE BLUE ISLAND SHOW.

Blue Island, Ill., held its eighth annual show in Saenger Hall last month and birds of highest quality were exhibited in all classes. The work of Judge Jansen gave satisfaction to all exhibitors and, although competition was keen in some classes owing to the excellent quality of birds, the awards were well placed. The Rhode Island Reds, both Single and Rose Comb, showed up particularly strong, a nice string of Leghorns being also shown. There were also some Buff Orpingtons that caught the eye of every visitor. The Wyandottes and Plymouth Rocks were there in Sunday clothes and, all in all, the show was a success in both quality and quantity of birds.

James B. Clark, Owner : Address all communications to C. W. Lloyd, Manager

The farmer's real Friend.

Is it Samuel L. Allen who makes those wonderful farm and garden implements that save so much time and labor?

You don't say so! Why, he used to be my neighbor out there in the country. I remember well when he worked the adjoining farm to mine—and a thrifty farmer he was, too. I'm not really surprised to hear he has gotten on so well, for he deserves it, I know.

But you say he makes implements for over two million farmers and gardeners, and has a big manufactory in Philadelphia working to its full capacity? That is fine.

Why bless you, I've used these Planet Jr. labor saving tools, as they are called, for years.

In fact you couldn't get me to use anything else. But I never dreamed they were the invention of my old neighbor, Samuel Allen. I might have known it, though, if I had only stopped to think.

I remember how he used to be always making experiments with his own inventions in his garden. He never seemed satisfied to plod along with the crude, hard-working implements that we had in those days. That accounts

for his success. He had an idea, and stuck to it till he produced something of lasting benefit to farmers and gardeners everywhere. And they evidently know a good thing

when they see it. I've used that No. 25 Planet Jr. Hill and Drill Seeder, Double-Wheel Hoe Cultivator and Plow for some time and couldn't get along without it. It combines almost every useful garden tool in one strong, light, easy-running, simply adjusted implement. It opens the furrow, sows the seed in drills or hills 4, 6, 8, 12 or 24 inches apart, covers, rolls down, and marks out the next row. And it works to perfection as a wheel-hoe, cultivator, and plow. This is only one of the many labor-saving implements that are the product of Samuel Allen's thought, is it? We owe him a debt of gratitude for revolutionizing farming methods and taking away the drudgery.

I wouldn't like to call any farmer or gardener a back number who hasn't at least one of these implements on his farm, but I certainly think he is neglecting his own interests if he isn't progressive enough to send for the illustrated 56-page catalogue of 1910 Planet Jr. implements issued by S. L. Allen & Co., Box 11071, Philadelphia, which they send free upon request.

AFTON FARMS.

While at the late New York show the writer had the pleasure of meeting Mr. S. B. Twining of Yardley, Pa., proprietor of Afton Farm, whose picture appears on this page. During our conversation we asked Mr. Twining to send us a short history of his place and business and we give below the facts as stated by him in a recent communication:

Afton Farm was started in 1879 by the late E. W. Twining (my father). The first ten years it was run as sort of a hobby. Much experimenting was done which was very expensive at the time, but

sure and steady. The annual output has now reached 28,000 chickens, 22,000 ducks, besides selling thousands of eggs for incubation and the market.

Their market goods are of such an excellence that they have customers in Boston, Mass., New York City, Plainfield, Trenton, Asbury Park and Atlantic City, N. J. Philadelphia, Pa., and Washington, D. C.

They go into 1910 with 200 selected Barred Plymouth Rock breeders, 150 White Wyandottes, 50 Cornish Indian Games, 300 S. C. W. Leghorn, 500 Mammoth Imperial Pekin ducks and 1,000 S.

S. B. TWINING, YARDLEY, PA.

has proven a rock sound foundation for the present Afton Farm. The writer, S. B. Twining, was born Dec. 29, 1879, ten months after first poultry was bought. He has grown up with and almost a part of the business. He was an only child and for years the chickens were his only playmates. When school days came he spent his vacations helping with the poultry. In 1899 Mr. E. W. Twining's main helper died and S. B. was taken out of school and he adopted poultry production as a life work. January 4, 1906, Mr. E. W. Twining died after a brief illness. Since then S. B. Twining has been manager and sole owner of Afton Farm.

Afton Farm has not had a mushroom growth, but its growth has been slow,

C. White Leghorn pullets kept for market eggs alone.

Birds are culled three times before they reach Afton Farm breeding pens, so it is no wonder we have vitality, good shape, size and heavy egg yield. Afton Farm was started as a market poultry farm, and has stuck to it, though we experimented somewhat with the fancy.

How did we get to selling breeding stock? We made a success of the business. Incubator concerns, etc., sent people to Afton Farm to see a living example of poultry success.

They found it.

Now these people were unusually anxious to get some of our stock. We sold them some. It paid. We got to ad-

vertising our stock. It paid. We advertised still greater, and here we are.

Besides running this large business, Mr. S. B. Twining takes an active part in seven different companies (director), one of which is a large manufacturing concern of Philadelphia which does an annual business of over a million dollars. But he says, adapt business methods to the market poultry business and you have as fine a business as any one could find for a life work.

This farm issues a very handsome catalogue, which is sent to anyone who desires it, and we expect in the near future to be able to present to our readers a number of illustrations of this farm, together with more detailed information. In the meantime we ask our readers to send for catalogue and get acquainted with Mr. Twining and learn more about how he has made a success of the poultry business.

POULTRY POPULARITY.

By Frank J. Stamm, Manager River Home Poultry Yards, Perrysburg, O.

IT seems to be human nature to want to be "in the swim." This slang phrase expresses the feeling of many persons who are engaged in, or who expect to engage in the poultry business either on a large or small scale. This tendency to want the latest thing in poultry has caused many an enthusiast to follow the ignis fatuus of a "new breed" out into the marshes and bogs of the hybrid, where he has found that the "latest breed" was only a delusion without merit and destined only to end in well-deserved oblivion.

A great many persons, especially ama-

teurs, are misled by the unscrupulous or over-enthusiastic advocates of a new variety. Such advocates often make exaggerated and indeed absurd claims for the particular alleged new breed which they are exploiting. Their claims are often not any better founded or authenticated than are the claims made for the historic hen whose virtues have been immortalized in the classic poem, one of whose stanzas says of her:

"Old Grimes he had a good old hen,
A good old hen was she,
She used to lay two eggs a day,
And Sunday she laid three."

Unfortunately the poet was not a practical poultryman and therefore failed to give us the name of the variety of the Grimes hen, but it is perfectly safe to assume that she was one of the then latest breed and that her progeny have all long since gone into that oblivion to which we have already referred.

The popularity of the different established and standard varieties increases or decreases from year to year or from decade to decade without any apparent very good reason or reasons. There are, however, no doubt many causes for this fluctuation in the tide of popularity, but it is difficult to point out any one cause which controls the ebb and flow which carries a particular variety backward and forward on the sea of popular fancy.

Take, for instance, the noble Light Brahma, the pioneer of thoroughbred poultry in this country. For more than forty years from the time of their first importation into the United States they easily maintained the lead as the most popular of all fowls. They were the largest of the chicken family, unequaled as table fowls, splendid layers, especially

in the winter, beautiful, stately and docile. In fact, the Light Brahmas seem to possess all necessary qualities to keep them on the topmost wave of popularity, and yet for some reason there was a short time when other breeds with much less merit greatly exceeded them in numbers and in popular favor. Now the tide has turned; the Light Brahma is again as popular as ever and in great demand. It is now only a question of getting enough high-class Light Brahmas to supply this demand. No one can give a conclusive reason why it was that a few years ago the Light Brahma seemed to be on the decline in the poultry world, or why it is that this condition is now reversed and that there is a greater demand for high-class stock of this variety than ever before.

In my opinion at least one potent influence, which helps to bring about this seeming fickleness on the part of the poultry public, is that poultry raisers simply want a change in variety without knowing exactly why. They are often unconsciously influenced by color. A breeder who has been raising white or black fowls for several years sees a flock of Buffs or Reds, and the contrast in color is so striking that he is greatly impressed and concludes to make a change without knowing exactly why. Or the breeder is just as likely to change from the Buffs or Reds to one of the White or Black varieties for the same reason. In other words the same color of fowls year after year becomes somewhat monotonous to the eye and so the breeder makes the change to a breed of a different color. Advertising, no doubt, is also a very important factor in determining popularity of any given variety. As an illustration of what advertising can do towards pop-

WILLIAM COOK & SONS

—ESTABLISHED 1873—

Originators of All the Orpingtons

Box A, Scotch Plains, New Jersey

First Prize S. C. Black Orpington Cockerel, Madison Square, 1910, owned and bred by Wm. Cook & Sons, Scotch Plains, N. J., Originators of all the Orpingtons.

AS USUAL---We won many times more firsts than any Orpington breeder at Madison Square, 1910---thirteen first prizes. In six showings at Madison Square, we have won 103 first and 70 second prizes, more than six times as many firsts as any other Orpington breeder. These are convincing facts that we have the best in the world and is why we are recognized headquarters for the best Orpingtons, all varieties. Many other winners were sold by us or hatched from our eggs. Over 12,000 first prizes won by us.

Send 6c for Our Illustrated Catalogue

containing history and origination of all the Orpingtons, valuable hints on poultry keeping and mating list.

EGGS---From our winners and the finest Orpingtons in the world, \$10.00 a setting; from fine stock, \$5.00.

We guarantee safe delivery and satisfaction on everything we ship and this is backed by a reputation of thirty-seven years' standing, this means something to you. Advice free. Inspection cordially invited. Trains met. Several thousand stock birds always for sale.

ularizing a variety it is perhaps permissible to refer to the experience of River Home Poultry Yards with their Light Brahmas. Several years ago, when they began to advertise the Light Brahmas aggressively, it seemed to be uphill work. For a long time the interest created and the inquiries received were almost discouraging. By persistent effort, however,

Brahmas. The interest taken in their exhibit at these two greatest American shows is largely due to the fact that the public has become familiar with the merits of their Light Brahmas through their advertisements in all of the leading poultry journals.

What has been accomplished in repopularizing the Light Brahmas by River

spend his money on printers' ink, because in such a case his efforts will end in ignominious failure.

BLACK LANGSHANS.

At the late Chicago show the breeders of Black Langshans made a very creditable showing, and we are pleased to note the renewed interest that is being taken in this variety, as this variety is certainly worthy of more consideration than has been given them the past few years. Time was when the Black Langshan was one of the most popular varieties, and was recognized as a general purpose fowl, but the newer varieties coming into popular favor crowded them to the rear, but merit will win, and as the Langshan is "built on merit" we predict that in a very short time they will again be one of the largest classes at all the leading shows.

Mr. R. A. Hewes, Crete, Ill., has never lost faith in this variety and has continued to breed and exhibit them since 1883, and he reports that the demand is rapidly increasing for good quality birds. At the late Chicago show he exhibited a number of birds and won first and second cock and third hen. This is but a repetition of what he has been doing for years. Send for his mating list and prices. He will treat you right. Mention American Poultry Journal.

THE WAUKEGAN SHOW.

Waukegan, Ill., had its first real poultry show in the Armory last month, about 1,100 birds being entered and competition was keen. Birds of the highest quality were exhibited and scored by Judges McClave and Byers. The hall was handsomely decorated and the association assisted by its able secretary, Mr. Conley, and superintendent, Mr. Gleason, have laid the foundation for a still greater show next year. All prizes were promptly paid, and as the exhibitors were well satisfied in every particular a feeling of general contentment reigned in all parts of the hall.

The above pen of S. C. White Orpingtons was the surprise of the late New York show. Their owner, Mr. Harries, is an old Orpington breeder, and his show record in former years is one to be proud of.

all this is changed and it is now simply remarkable the great number of people who have become interested in this old standard variety. At the Chicago and Madison Square shows, held last December, there was no exhibit which was inquired for oftener, or which attracted more favorable attention, than River Home Poultry Yards exhibit of Light

Home Poultry Yards and other Light Brahma breeders can be accomplished with other good standard varieties by intelligent and persistent advertising. Of course I am assuming all the time that the advertiser has the stock that will back up his advertising statements. If his birds do not sustain the claims he makes in his advertisements, he had better not

REDS

SINGLE COMB. My best pen contains Madison Square Garden and other winners. Eggs, \$5 per 15. Second pen headed by cockerel winning at Philadelphia and Norristown, Pa., mated to select females, \$3; other matings, \$2. My birds have superb shape and color. Breeding cockerels, \$5 and \$10. Baby chicks, \$15, \$25.00 and \$40.00 per 100. Write me, I can please you.

J. H. CROSSLEY, Box 177, MAGNOLIA, NEW JERSEY

White Wyandottes

NEW YORK AND BOSTON WINNERS.—Our birds have won at America's leading shows for the past twelve years and at the late show at Madison Square Garden our birds were again among the winners, capturing fourth and fifth cock, fifth hen and fifth cockerel. We are offering fifty high class breeding cockerels that will put **QUALITY** into your flock. A few pens and trios at "live and let live" prices.

Our White Rocks

Won at Madison Square Garden in the past and Boston, 1910, on three entries first and third cockerel; special for best colored male and \$100 challenge cup for champion male. These winnings added to our past record should convince you we have the quality you are looking for. Anyway you may return them and get your money back if not as represented. Write for prices.

EGGS

From our pens, both varieties, which will contain all of our prize winners, carefully mated to produce more prize winners at \$5 and \$10 per fifteen. We sell you the same eggs we would set ourselves. We satisfied all our customers last year and we will please you. Write us today. Remember, we breed and raise all our winners. Stamp for mating list.

SUBSCRIPTION DEPARTMENT

The prizes on our great fall subscription contest, which closed December 31, 1909, were won by the following contestants:

J. H. Jackson, Mass., 1st; Thos. D. Gannaway, D. C., 2d; Arthur S. Johnson, N. J., 3d; Macon A. Green, Tenn., 4th; F. E. Eggerman, Mo., 5th; A. J. Savacool, Pa., 6th; Mrs. A. K. Charles, Kans., 7th; E. J. Weidner, Pa., 8th; A. E. Boyd, Ohio, 9th; Mrs. Rose Simpson, Ala., 10th; E. Kaufman, Pa., 11th; H. A. Green, Ohio, 12th; C. S. Hunting, Mo., 13th; H. G. Hall, W. Va., 14th; Fred Grundy, Ill., 15th; Oscar Nicodemus, Ohio, 16th; R. A. Page, Pa., 17th; John Galbraith, Ohio, 18th; Thos. Watkin, Ohio, 19th; Carl H. Sly, Ohio, 20th; Jas. Christopher, Ill., 21st; S. A. Haines, N. J., 22d; Wm. Ulrich, Pa., 23d; Wm. G. Morris, Vt., 24th; H. V. Ruth, Pa., 25th; M. Wilson, N. Y., 26th; George B. Derby, Ohio, 27th; Louis Lemke, Wis., 28th; W. J. Lanphear, Ohio, 29th; Mrs. J. F. Mahan, Ohio, 30th; Mrs. Wm. Tiemann, Ill., 31st; Dr. T. L. Johnson, Tenn., 32d; E. H. Keefer, Pa., 33d; John N. Good, Pa., 34th; Arthur Keene, Maine, 35th; J. J. Dubois, Ind., 36th; A. A. Cole, Minn., 37th; John Davidson, Wis., 38th; Carl Hettler, N. Y., 39th; Harvey E. Bitler, Pa., 40th; Ross Mercer, Ohio, 41st; J. Camp, Ohio, 42d; A. W. Foreman, Ill., 43d; Dike C. Miller, Mich., 44th; Mrs. W. B. Morris, Wis., 45th; F. M. Griffith, Ohio, 46th; Jas. Maroney, Pa., 47th; D. B. Binger, Pa., 48th; Wm. A. Flanders, Pa., 49th; R. J. Rawlins, N. D., 50th; A. E. Aldrich, Ohio, 51st; Harold Houghton, Ind., 52d.

Mr. Gannaway, in acknowledging receipt of his \$100 prize, writes as follows: Washington, D. C., Jan. 17, 1910.
American Poultry Journal Pub. Co.,
Chicago, Ill.

Gentlemen: I am in receipt of your

letter of Jan. 15 just inclosing your check for one hundred (\$100.00) dollars as payment of second prize offered in your contest just closed, for which please accept my most sincere thanks. This was won so quickly and so easily that I can hardly realize that it is mine. I say so quickly, because I didn't take a subscription until after Nov. 20, 1909; and when I say easily I don't mean to infer that I had nothing to do. This is the fourth A. P. J. contest I have participated in, having won first in the springs of 1907 and 1908, twelfth in the spring of 1909, and second in the one closed December 31, 1909. I had to work faithfully and tenaciously in three of them. But the effort was so small as compared with that required to earn the same value in any other way which I have ever applied my earning capacity, that I am forced to say, at times it almost seems like I had taken something which did not belong to me. The majority of my subscriptions have been obtained before and after office hours. Many of them were taken while riding on suburban cars. My work for A. P. J. has been the means of my meeting hundreds of people and making scores of friends which I would not have otherwise made. I have found by experience that it becomes easier and easier each year to take subscriptions for A. P. J. In the contest just closed I realized that my time in which to get subscriptions was exceedingly short, as the contest had been running over ten weeks before I decided to enter, my time up to Dec. 15 being almost entirely taken up with other work. I spoke to several of my friends and asked them to assist me by speaking to their friends and getting them to take A. P. J. through me, and I was agreeably surprised at the liberal response of several of them, one man giving me 28 counts. I am very sorry that it is utterly

impossible for me to take part in the contest which just started; for it is certainly an easy way to make some extra money. In all my work for your journal I have not lost more than twenty days from my regular work. The most skeptical must admit that it has been twenty days well spent.

The person who is lucky enough to get the piano you are offering in the present contest will have no reasons to regret any reasonable effort he may put forth in winning it. I think more of my Wing piano, which I won in 1908, than I did when I first got it. I find one of my neighbors has one of them; he has been using it for fifteen years and he is still highly pleased with it. Assuring you that I am well pleased with the results of my work for A. P. J., and regretting that I will be unable to take part in the contest just inaugurated, also wishing you unbounded success in the future with your most excellent journal, I remain,

Very respectfully,

Thos. D. Gannaway.

The piano of which Mr. Gannaway speaks is manufactured by Wing & Sons, 372-385 West 13th street, New York City, N. Y., and if you want a full description of it write for their book "A Standard Piano." It will be sent to you free. The piano we are offering is their style No. 21 listed therein.

If you have a little spare time it will pay you to read our offer on pages 158-159 of this issue, as it will repay you well for your trouble. Also turn to page 183 and you will have a full description of the wonderful book we will give you free.

Mr. J. P. Keating, Westboro, Mass., breeder of Columbian Wyandottes, just about won everything at Boston. If you want good Columbians Mr. Keating has them.

A Valuable Poultry Book Free

I will send to any address absolutely free a valuable book known as "A Treatise on Poultry." Tells how to make a good living from poultry. To anyone sending 40c for a trial Package of Egan's Peerless Poultry Powder, a guaranteed egg producer. Send today, as I only make this offer for a limited time. Write plainly and address all letters to

THE EGAN POULTRY FOOD CO.
Jackson - - - Michigan

THE GREATEST INCUBATOR IN THE WORLD ON FREE TRIAL.

Sam Thompson, manufacturer of the Fairfield Incubators and Brooders, wants every reader of this paper to try his great machine two hatches free.

That's an unusual offer and it certainly indicates that the claims for this machine are true.

In his advertisement, which appears in another part of this paper, Mr. Thompson states that his machine is strongest built, best looking, guaranteed to produce bigger hatches and stronger chicks than any machine on the market.

To back their claim Mr. Thompson will send our readers his incubator for a two-hatch trial free. If you are interested, write today for his new catalogue and poultry book, which is free, and get his

city stores, and at less than usual prices. You will remember that their catalogue is sent without charge to all who request it and mention this journal in their letter. We thank our readers for the number of orders they have sent to Montgomery Ward & Co. in response to their advertisements, and have no doubt that many will find it to their financial advantage to continue to trade with them for many lines of goods.

WHITE WYANDOTTES AT KANSAS CITY.

George H. Rudy, the well-known breeder of White Wyandottes, Mattoon, Ill., entered thirty-seven of his birds at the late Kansas City show and created a sensation by winning practically all the prizes. "Perfection Junior," his noted male bird, was the attraction of the show and won first

great trial free proposition. Address Sam Thompson, president Nebraska Incubator Co., 217 Main street, Fairfield, Neb.

TO KEEP FOR FUTURE REFERENCE.

We are informed that this is the last issue in which Montgomery Ward & Co. are going to run their big ad. We presume you have all seen it in the last two months, and this month, and are assured that many orders for goods have been sent to them as the result of advertising in our columns. You will do well to preserve this copy with the Montgomery Ward & Co. ad in it, as you will doubtless wish to refer to its bargain prices freely and frequently during the coming spring and summer.

The best way to do, if you have not already done so, is to send to them for a copy of their large catalogue No. 78. If you have this catalogue on hand you are prepared to buy not only poultry supplies, but also all other goods found in the largest

and special Weekly Kansas City Star's silver trophy cup, value \$150, for the best bird in the show. His winnings were cock, 1st, 2d, 3d and 4th; hens, 1st, 2d, 3d and 4th; cockerels, 1st, 2d, 3d and 5th; pullets, 1st, 2d, 4th and 5th; pens, 1st and 4th; special for best bird in show; special for best display. This is probably the best winning on White Wyandottes made by any breeder this season and goes to prove that Rudy's Perfection strain of White Wyandottes are unexcelled.

Chas Phelps, Ft. Wayne, Ind., the Orpington breeder, reports the following winnings at the late Kendallville, Ind., show: S. C. Black Orpingtons: First pen, first cock, first hen, second hen, third hen and fourth hen. S. C. Buff Orpingtons: First pen, second cockerel, first hen, second hen, third hen and fourth hen. S. C. Buff Orpingtons: First pen, second cockerel, third hen and three birds and a fourth on pullets. Write him for prices and particulars and mention American Poultry Journal.

THE W. DAWSON WHITE WYANDOTTES.

This line of White Wyandottes has long been favorably known in both America and Canada. Several of their best record winnings have been made on this side of the line. We have seen them for three years at the great Canadian winter show, the "Ontario," held at Guelph, and in classes of from 200 to 300 birds they have always made a most creditable winning. A year ago at the great Buffalo show they made close to a clean sweep. This fall at the New York State Fair, in one of the strongest classes ever shown, they won nine ribbons on ten entries. Their December, 1909, winnings at the Ontario were 1st, 5th and 7th hen, 1st and 8th pullet, 4th and 5th cockerel; cup for best cockerel and pullet and special for best display. Three years ago they entered a cock at Madison Square Garden, New York, and won first prize. This line combines size with shape and good head points. Note their adv. in this issue and send for their mating list.

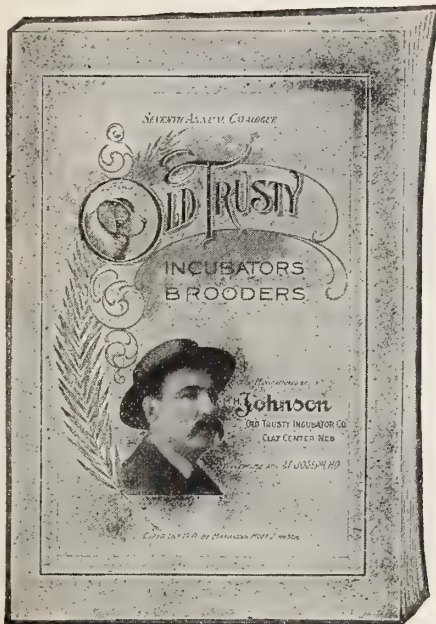

SHOEMAKER'S HANDSOME POULTRY BOOK FOR 1910.

C. C. Shoemaker has just issued his Poultry Book and Almanac for 1910. Like all of its preceding numbers it is completely perfect in all of its various departments. This year Mr. Shoemaker seems to have outdone any of his previous efforts. The book is brimming over with valuable information for all those who deal in or have chickens. And it is evident that no expense was spared in the collecting of facts for his complete encyclopedia of facts of chickendom.

The book itself is a little masterpiece of printer's art. The handsome lithographed cover in many colors is the most striking illustration of this character we have ever seen. As one turns the pages countless color plates of every fowl imaginable, all shown in their correct plumage, greet the eyes. Incubators, brooders, etc., are explained at length. The entire volume is probably the most complete and most artistic work of its kind ever issued. For further information and price see advertisement on page —.

JOHNSON MAKES LESS THAN 80 CENTS ON EACH OLD TRUSTY INCUBATOR.

Old Trusty Johnson, of Clay Center, Neb., has it all figured out this year. He shows you in plain figures how he can afford to make less than 8 per cent on each incubator he sells. And the most wonderful

part of all is, his incubator sells for less than \$10—all freight prepaid. That brings his profit down to less than 80 cents on each machine.

He's making over 50,000 Old Trusties a year now. He says his manufacturing cost—"overhead charges" he calls them—are

just about the same as when he only made 25,000. That's logical, of course. He spreads this manufacturing cost over more than 50,000 incubators. He says that is a good many more than any other manufacturer ever made in a year.

You ought to get Johnson's book this year, sure. It is bigger and better than ever—printed on the finest kind of paper—in colors, all through. Send your name to Johnson, Incubator Man, Clay Center, Neb., on a postal card to get this book and less than \$10-price, freight prepaid. Also his generous free trial offer to prove the Old Trusty is satisfactory to you in every way. Johnson himself wants to set you on the straight, sure road to bigger poultry profits. Send him your name now.

AT YOUNGSTOWN, OHIO.

We recently received a communication from F. D. Sutton, Youngstown, Ohio, in which he says: "I pretty nearly made a clean sweep in our show, defeating the 1st W. Wyandotte cock of both Chicago and Cincinnati, O. I also won over 1st hen at Cincinnati, O., as well as pullet and cockerel. My first pullet was conceded to be the most perfect Wyandotte type ever shown in the East. This bird was bred by me, together with all females in the first pen and three pullets in the third pen. I also showed three pullets and one cockerel in the W. Orpington class, and in the hottest class ever shown here I won on the four entries, 1st-3d pullet, 3d cockerel. My birds were conceded to be the whitest W. Orpingtons ever shown here, while my 1st pullet was the real sensation of the Orpington class."

Irving A. and Frank C. Sibley, South Bend, Ind., the well known Rhode Island Red breeders, report the following at the annual meeting of the Michigan State Poultry Association, held at Detroit, Mich., Jan. 12 to 18, 1910: On Rose Comb Rhode Island Reds: First and third on cocks, second and fourth on hens, first, second and fourth on cockerels, first and second on pullets, first on pen, the four club specials for color and shape, first for best display of either variety of Rhode Island Reds, the Library Park Hotel Cup, besides several other specials.

A MADISON SQUARE NEW YORK VICTORY

FOR

BRIGHT'S BROWN LEGHORNS BARRED PLYMOUTH ROCKS

At the last New York show our Barred Plymouth Rocks won more prizes and more points than those of any competitor, including the most sought-for prize in the whole realm of poultrydom.

Champion New York Barred Rock Male

and this for the third time in the last four years.

Bright's Brown Leghorns

have been the champions for more than a dozen years. They have made the **big wins** in big classes. **Surely supreme at three world's fairs, at the last Madison Square New York shows, 1909-10. Three firsts!**

The best lot of breeders in either line, both males and females of either variety, that we ever had for sale at just right prices.

EGGS from the best matings we ever had, from our N. Y. winners, \$10 to \$25 a setting; from birds closely related of nearly equal merit, \$5 a setting.

Grove Hill Poultry Yards : Box 410, Waltham, Mass.
William Ellery Bright, Proprietor : : A. C. Smith, Superintendent

NEGRO TURNS SOMERSAULT.

Down in Arkansas it is reported that a tree fell across a section of Page Fence and a lazy negro squatted on the flattened fence, watching a farmer saw the tree in order to release the fence. Suddenly the saw cut through the tree and—biff! The Page Fence sprang back into its upright position with such force that the negro turned a complete back somersault and then dashed for the tall timber as if pursued by old Satan himself.

The Jubilee Edition of the Page Fence catalogue, which is now being mailed, gives much information of value to the prospective purchaser of wire fence. Copies may be obtained free, together with a free sample of Page Wire, by addressing The Page Woven Wire Fence Co., Box 222, Adrian, Mich.

C. L. PUDEP, PROP. KITTATINNY POULTRY YARDS, IRVINGTON, N. J.

Mr. C. L. Puder, proprietor of Kittatinny Poultry Yards, Irvington, N. J., the Single Comb Brown Leghorn specialist, reports another good win at the great International Fair of 1st and 2d cockerel, 2d and 3d pullet, 2d hen and 1st pen. His birds have also been winners at Madison Square Garden, Newark, Paterson, etc. Mr. Puder writes that he has some exceptionally fine cockerels of exhibition and breeding quality for sale and is in the best shape he ever was for the egg trade. Write him.

A GREAT BOOK FREE.

"Great Crops of Strawberries and How to Grow Them" for 1910 has reached our desk. This annual edition sent out by R. M. Kellogg Company of Three Rivers, Mich., has come to be a standard work of highest value to strawberry growers, and the number now before us excels in this respect, if possible, any previous issue. Typographically, it is the most beautiful edition this great company ever has sent out, and its illustrations are of unusual beauty and suggestiveness. None may see these illustrations and read of the results secured by

growers without appreciating the wonderful quality of the Kellogg plants. Address R. M. Kellogg Co., Box No. 325, Three Rivers, Mich., and a copy of this splendid book will come forward to you free.

"PRACTICAL POULTRY FEEDING."

This is the title of the principal article contained in the new annual edition of the Pocketbook of Pointers just issued by the O. K. Stock Food Company. This interesting and valuable article is contributed by Mr. D. J. Lambert, the famous poultry judge, who needs no introduction to our readers. Mr. Lambert has had a life-long experience in poultry keeping. His statements are never based upon hearsay, but are backed up by sound practical knowledge, scientific investigation and tireless research. This booklet will be of great interest and benefit to all lovers of poultry and live stock. It can be obtained by addressing the O. K. Stock Food Company, 316 Traders Bldg., Chicago, Ill.

UP-TO-DATE MATING LIST.

A. E. Martz, Arcadia, Ind., the Buff Orpington specialist, has just issued his 1910 mating list, which is about the neatest and most attractive list we have had come to our desk this season. This list contains forty-eight pages and cover, printed on a good quality of paper and is profusely illustrated with good half-tone cuts of his prize winners and scenes on his farm. It also gives a complete description of each of his twelve breeding yards and other information about his plant and stock. It is free for the asking. Send for one today and mention American Poultry Journal.

W. N. Graham, Bradford, Ill., the White Rock specialist of the West. Anyone wishing White Rocks as a foundation strain, or any other wishing new blood to improve theirs, will find just what they are looking for by procuring stock or eggs from this prize-winning strain. When Mr. Graham decided to breed White Rocks he spared neither time nor money in procuring the very best to be had from the foremost eastern breeders—breeders that were win-

ning year after year at Madison Square and other large eastern shows. By careful mating and trap nests and an accurate record kept of each female he has built up a strain of White Rocks that are considered by our best judges to be equal to anything bred in the East; in fact, the United States. Mr. Graham has shown at several state shows, Peoria and several other large shows. He has the proud record of winning first pen at every show at which he has shown the past seven years, competing against as high as 225 birds of this breed at some of the shows. While he has both males and females scoring as high as 95½-96¼, he has succeeded in improving their laying qualities as well as having females in this season's breeding pens with an egg record of upwards of 225 eggs per year. Look up his ad in these columns and write him for his mating list, scores and prices on this prize-winning strain.

I have five little girls, and as we are in moderate circumstances their clothes must largely be "hand-downs." Can you suggest any pretty dress goods that make dresses really durable enough for my other children to wear after the first one outgrows them?—Mother of Pearls.

I know of nothing better for your purpose than Simpson-Eddystone Prints, made by the Eddystone Mfg. Co., Philadelphia, and sold by dry goods dealers all over the United States. These are the standard calicoes that have been noted so many years for their durable quality. I happen to know that the quality has been maintained to the present, while the pretty patterns have been kept up to date. The colors are absolutely fast, even after repeated washing.

These goods can be made up into about as stylish children's dresses as you can find anywhere. The cost is so extremely moderate I am sure you will be glad to know about this material.

E. E. Wilson, 921 Ashland avenue, Indianapolis, Ind., breeder of S. C. Black Minorcas, won at Galveston, Ind., 1st cock, 1st and 4th hen, 1st cockerel, 1st and 2d pullet and 1st pen. At Kokomo, Ind., 1st cock, 1st and 2d hen, 1st cockerel, 1st and 2d pullet and 1st pen. At Noblesville, Ind., 1st cock, 1st and 2d hen, 1st and 2d pullet, 1st pen, 2d cockerel. First cockerel went to a bird raised from my eggs. First hen and 1st pullet were the two highest scoring birds in show.

Louis Rausch, Creve Coeur, Mo., who breeds Barred Rocks exclusively, reports that he has mated up eight grand pens for the season's trade, five pens for pullets and three for cockerels. Mr. Rausch has been breeding Barred Rocks for a number of years and has produced birds that have won at the leading shows in the country. If you want eggs to improve your stock he can supply your wants. Better write him today for prices and particulars and mention American Poultry Journal.

Herman & Haag, of Massillon, Ohio, whose ad appears in this issue, are raisers of Brown Leghorns and Reds—farm raised, strong, healthy stock, with standard points given careful consideration, as their winnings at the late Massillon show demonstrated. On Leghorns they won 1st pen, 1st and 2d cockerel, 2d and 3d cock, 2d hen.

East Liverpool, O., surpasses many sections and cities in the class of Black Minorcas to be found there. Harry Johnson, who enters our advertising columns this month, offering eggs from his fowls, won at the late East Liverpool shows 1st cock, 1st pullet, 1st pen and 2d cockerel, it will be worth your while to look up his ad and write him without delay.

COLUMBIAN WYANDOTTES

that swept the deck at the West Michigan State Fair. Eggs \$3 per 15, \$5 per 30.
A very few cockerels left at reasonable prices.

J. G. Van Dyk - Station C - Grand Rapids, Mich.

Silver Laced Wyandottes

WE LEAD, OTHERS FOLLOW—At the great Hagerstown Show, in one of the strongest classes of Silvers ever brought together, we won first and third pullet and fourth cockerel on four entries. Our winning pullet was pronounced by leading authorities to be one of the best birds ever bred. Eggs for hatching from the grandest matings at \$3 per setting. We still have a few choice cockerels in Silver and White Wyandottes at \$3 and \$5 each.

WERTZBERGER BROTHERS : CARE MERCHANTS HOTEL : ALTOONA, PENNSYLVANIA

BLAKER'S BARRED PLY. ROCKS WIN

Do you want a winner for your show? We have five grand show cocks, eighteen exhibition cockerels, sixteen exhibition hens and twenty-two crack show pullets, rapidly rounding into show shape, the cream of over 500 head. They are being conditioned with the same care and skill that was used by me in fitting E. B. Thompson's great Madison Square winners during my two seasons with him as head poultryman. These birds are fit to show anywhere, are the down-to-date new standard kind; clean, snappy, narrow barred, elegant shape, low even combs, rich eye and leg color. Many are direct descendants of Madison Square Garden winners. We also have hundreds of select breeders and fine utility birds. Our 32-page page catalog tells all about us and the matings that produced these fine birds.

A. E. Blaker

Route 2, Box A

Parsons, Kansas

Blanchard's White Leghorns

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled as foundation stock or for introducing new blood. Stock for sale, both old and young. Illustrated circular free.

WINNERS AT MADISON SQUARE GARDEN, N. Y., 1903-1904-1905-1906-1907

A. M. SHAW

SUCCESSOR TO H. J. BLANCHARD

Box 997, GROTON, N. Y.

Foster's "Duke of Kent" Black Orpingtons

For the best S. C. Black Orpingtons you must send to the oldest and best breeder of this variety in America. The "Duke of Kent" and six of the best hens that money could buy were the foundation of this famous strain. Five hundred young premium birds for sale and highest class eggs at \$4.00 per 13; \$7.00 for 26. Send a one-cent stamp for the history of the Black Orpingtons and a 9x12 chromo of this famous bird and three of his sons.

D. N. FOSTER : VICE-PRES. AMERICAN ORP. CLUB : R. 7, FT. WAYNE, INDIANA

SIMMONS BROS., STOCKTON, ILL.

We wish to call our readers' attention to the win made on Golden Wyandottes at Madison Square Garden, New York, by Simmons Bros., Stockton, Ill. Their second prize cockerel was considered by many of the best judges in the East to be one of the finest specimens of Golden Wyandotte males yet shown. They also captured third on pullet. Only two entries were made at New York by the Messrs. Simmons Bros., and this victory, in addition to their other winnings, certainly places them as leaders in this breed.

BUFF ROCKS AT NEW YORK.

John W. Poley, Royersford, Pa., the man that knows how to produce the "World's Best" Buff Plymouth Rocks, entered a few of his birds at the late New York show and won the cream of the prizes, besides the National championship club cup for best cock, hen, cockerel and pullet, best surface color cock, best shaped hen, best colored hen, best surface color pullet and first display, and seven cash specials. You will find his ad in this issue. Better write him for catalogue and mention American Poultry Journal.

CHANGE OF ADDRESS.

Mr. George W. Hillson, who has for a number of years been located at Amenia, N. Y., where he bred Barred Plymouth

**BARRED PLYMOUTH ROCK.**

This female has a record of 8 firsts, a third, fourth and fifth at the best shows, including Boston. Owned by F. S. Nicholson, Otisville, N. Y.

Rocks, has moved to Hyde Park, N. Y., and taken charge of the poultry department on the farm of F. W. Vanderbilt. Mr. Hillson took all his prize-winning Barred Rocks with him and is now in a position to produce the very best Barred Rocks that can be bred. Look up his ad in this issue and write for full particulars.

S. C. BLACK MINORCAS AT CHICAGO.

Through error we failed to mention in our January issue the second prize S. C. Black Minorca pen at the late Chicago show. This pen was exhibited by August E. Hartman, Maywood, Ill., who makes a specialty of this variety and has succeeded in producing some extra good ones.

A. J. Laundon, Elyria, Ohio, breeder of White and Barred P. Rocks and S. C. Brown Leghorns, made thirty entries at his local show and won eighteen regular premiums, ten specials and two silver cups, with 140 Rocks competing. He has a few choice birds for sale at reasonable prices. Also eggs from Barred, White and Buff Rocks at \$3.50 per 15; \$5 per 30. He guarantees satisfaction. Write him and mention American Poultry Journal.

SAFETY BROODING

Candee Hot Water Brooder System

**Healthy Heat Makes Healthy Chicks****THE FEATURES ARE**

Economical Hot Water Heater that burns cheap fuel, eliminates danger of fire and is 15% cheaper than oil to operate.

Automatic Temperature Regulator that operates with the expansion of the water in the system and insures absolutely even temperature in all the hovers.

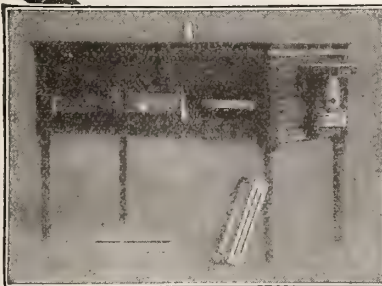

System of piping and hover construction that keeps chicks from crowding.

Write to-day for catalog and prices. Estimates free.

Candee Hot Water Brooder Co., Box B, DeWitt, New York

Know This 5,000 Egg Hatcher

Before You Decide on Any

Most simple to operate anywhere; cannot over-heat egg chamber; only one lamp—less oil; double heating system—hot air and hot water; no thermostat but most even temperature; double air-spaces heated; no moisture problem; nature's ventilation—no draughts; hatches hen, duck, goose and turkey eggs at same time.

McCabe Incubators

—made in capacities up to 5,000 eggs. Finest construction and materials. Guaranteed to hatch every good egg. More advantages than any other incubator. Know them all. Get posted by writing for our honest little book.

McCabe Incubator Co.

140 McCabe St., St. Peter, Minn.

**S.C. Reds**

Bred from a long line of prize winners, they show their breeding by winning in four states, 1909. With 15 birds entered at Little Rock, Ark., I won 9 regular and 6 special prizes, including Stiff loving cup for highest scoring pen of any class in show; \$10 in gold for second highest scoring 15 birds shown by one exhibitor; 3 out of 4 club badges given by Rhode Island Club of America. If you want the best in Reds, or your flock needs new blood, Mr. Breeder, write me. Mating list now ready. Eggs for hatching. Stock all sold.

Lady Baltimore, winner of shape special at Little Rock, Ark. Score 94.

Have won the blue at Boston, Providence, Brockton Fair, Lynn and Milford. Some very fine show birds as well as breeders for sale at reasonable prices considering quality. Write me your wants and let me quote you prices.

B. E. Darling, Box 15, Natick, Massachusetts**HOW ABOUT YOUR FENCES?**

No mistake among the poultry raisers is as common or more expensive than that of buying lightweight, cheap poultry fence. In fact, most of the so-called "Poultry Fence" is not a fence at all, being little better than ordinary netting made of cheap wire that cannot be expected to give protection nor to last. Don't make that mistake. A good fence costs much less in the long run. Send to the Brown Fence & Wire Co., Dept. 3, Cleveland, Ohio, for President Brown's eye-opening book on this fence question. He manufactures fences of all kinds, but seems to take especial pride in the fence he makes for poultry raisers. While so closely woven as to answer every purpose of the poultry fence, they are heavy enough and substantial enough to be used as a general farm fence. At the bottom the wires are run one inch apart. The top or border wires are made of No. 9½ hard high carbon steel, so that they require no boards or rails with them.

The substantial construction of the fence enables you to set your posts farther apart

The best thing he can give a hen at this time is plenty of green bone. It contains an abundance of mineral matter, which is absolutely necessary to a laying hen. If prepared properly it will prove invaluable. This can easily be done if he possesses a Standard Bone Cutter. This machine has the unusual merit of cutting the bone across the grain, making its value as a food product so much greater. The manufacturers of this machine—The Standard Bone Cutter Co., of Milford, Mass.—are so sure of this that they will allow anyone a ten days' trial free, and let the person decide for himself the merits of their machine.

There are eleven grades—hand or power—they have put upon the market, and the prices are unusually low. The machines are easy to run, for they cannot clog and have automatic feed. An illustrated catalogue and information about a free trial can be had by addressing the Standard Bone Cutter Co., Milford, Mass.

With this issue of American Poultry Journal Mr. F. S. Nicholson, Otisville, N. Y., starts a display ad. He is a breeder

Ancona cockerel King William II. First at Madison Square and Cleveland. Sired by William I, first at Dairy Show, London, England, and Madison Square. Bred and exhibited by H. C. Sheppard, Berea, Ohio.

than is required by the ordinary poultry fencing, so that you can erect a real Brown fence strong enough to turn any animal on your place for less money than it would cost you to put up cheap poultry netting.

Another feature which must not be overlooked is the extra heavy galvanizing of the Brown fences. In recent years much of the fence on the market has rusted out in a short time, owing to the poor galvanizing. The Brown fence is treated by a process which amounts to double galvanizing and easily doubles the life of the wire.

You are certainly interested in this fencing question. Get Brown's book and get down to the root of the matter. It will pay you to investigate.

AN AID TO LAYING HENS.

At times there is a remarkable tendency on the part of hens to convert their surplus food into fat, while at other times they show the entirely different tendency to convert it into eggs. When this condition exists it seems to appropriate the major portion of the food partaken by them. If a poultryman observes closely he can easily tell whether the hens are inclined to become fat or are laying eggs. If the latter is the case, then the obvious thing for him to do is to heavily feed them.

of Barred Plymouth Rocks, who comes to us very highly recommended. He has been breeding B. P. Rocks for the past fifteen years, during which time he has exhibited and won the blue at most of the big eastern shows, and during that time has never had a bird returned that he has shipped to a customer. This speaks volumes for the quality of stock he ships. Better write him for prices and particulars and mention American Poultry Journal.

D. W. Young, Monroe, N. Y., breeder of S. C. White Leghorns, won the following specials at the late Madison Square Garden show: For best male, for best colored male, for best shaped male, for best female, for best color female, for best shaped female, for best display, state cup for best display, Elm trophy, medal for best cock, medal for best hen. See list of New York show awards for regular prizes.

Simmons Bros., Stockton, Ill., the well known Golden Wyandotte breeders, entered a few of their birds at the late Madison Square Garden show and won second cockerel and third pullet, and this in one of the hottest classes ever shown there. Further comments on the quality of their stock is unnecessary when they can produce birds of this quality.

THE BEST POULTRY CATALOGUE OF 1910.

We urge everyone of our readers to write to the Prairie State Incubator Co., 468 Main street, Homer City, Pa., for their 1910 poultry book and catalogue, entitled "Artificial Rearing of Poultry."

While this book has primarily been published to advertise the Prairie State Incubators, Brooders, Hovers and Colony Houses it contains over fifty pages of the most valuable information on poultry culture that we have ever seen between the two covers of a book.

Just to give you something of an idea of the character of this helpful information below are a couple of letters which the Prairie State Incubator Co. received unsolicited from two well-known poultrymen immediately on receipt of this catalogue.

The first one is from L. A. Clinton, di-

rector of the Connecticut Agricultural Experiment Station, Storrs, Conn.:

"Homer City, Pa.
"Dear Mr. Nix: I have just received a copy of your 1910 catalogue entitled 'Artificial Rearing of Poultry.' This is one of the best things of the kind I have ever seen. You are certainly to be congratulated on the high character of this publication."
The other letter is from F. Warren Sumner, proprietor of the St. Andrew Poultry Yards, Elizabeth, N. J., who writes:

"Dear Mr. Nix: I wish to congratulate you on the catalogue you have turned out this year, for it contains so much of especial value and interest aside from the advertising of your machines. I cannot see how it will fail to interest everyone receiving a copy."

This new book is quite a departure from the usual incubator catalogue, in that it tells how to succeed in hatching—how to rear them after they are hatched—goes into every detail of feeding, housing and caring for the little chicks—tells how to feed and care for laying hens—how to select layers, breeders—how to feed fowls for market—gives the results and experiences of the successful poultrymen—gives feed formulas and, in fact, more valuable information on poultry raising than we have ever seen in a book of this kind. You will be missing one of the best things of the year if you don't send for a copy of this book.

Among our new advertisers we wish to call your attention to that of Gratton &

tion close and strong. These gentlemen, with their large flocks of strictly first class birds, are in position to fill with satisfaction many orders this season, and we refer you to their ad with pleasure, as we know you will receive the most courteous treatment.

Among our new advertisers this month is the Longview Poultry Farm, J. Frank Carr, proprietor, located at Englewood Heights, in the suburbs of East Liverpool, O., who breeds S. C. Black Minorcas, and it has not been our pleasure for some time to visit as up-to-date a plant as this. We found his birds of exceptional quality, housed in Dr. Wood's Fresh Air Houses, and everything pertaining to both fowls and plant in general bespoke plainly the fact that here S. C. B. Minorcas received more than ordinary care and attention, hence the health and condition of his birds. This was fully demonstrated at the East Liverpool show recently, where he won 1st

Feeding and watering system as employed in Light Brahma pens and yards of River Home Poultry Yards, Perrysburg, Ohio.

rector of the Connecticut Agricultural Experiment Station, Storrs, Conn.:

"Homer City, Pa.
"Dear Mr. Nix: I have just received a copy of your 1910 catalogue entitled 'Artificial Rearing of Poultry.' This is one of the best things of the kind I have ever seen. You are certainly to be congratulated on the high character of this publication."

The other letter is from F. Warren Sumner, proprietor of the St. Andrew Poultry Yards, Elizabeth, N. J., who writes:

"Dear Mr. Nix: I wish to congratulate you on the catalogue you have turned out this year, for it contains so much of especial value and interest aside from the advertising of your machines. I cannot see how it will fail to interest everyone receiving a copy."

Gratton, East Liverpool, O., breeders of the "Blacks and Whites"—R. C. Black Minorcas and S. C. White Leghorns. The gentlemen who form this partnership are the originators of the new chinaware trophy cup, which is bound to rapidly take the place of the old silver cup, but their fowls are just as beautiful and good as the new cups, consequently it is no surprise to find them winning heavily in the "Blue," their latest winnings being 1st and 2d hen, 1st and 2d pullet, 1st pen, 2d and 4th cocks and special for best display in the White Leghorns, and 1st cockerel, 1st and 2d hen, 2d, 3d and 4th pullets in the Minorcas, at the East Liverpool show, classes of both these breeds being well filled and competi-

hen, 1st and 2d cockerel, 1st, 3d and 4th pullets and 2d pen. He is offering some fine cockerels for sale and eggs from his birds at prices worth your consideration. Write him at once.

We beg to call attention to the advertisement of the E. M. Pusey Company, of East Liverpool, O., which starts in this issue. These gentlemen are conducting a business that is of interest to poultrymen in general, that of furnishing not re-built, but re-manufactured typewriters of any kind or make, at a saving to you worth careful consideration. Write for their free circulars.

DES MOINES INCUBATOR CO.
1 2nd Street, Des Moines, Iowa

Pin Your Faith to the 16-Year Success

The Best In the World

Our machines are doing wonders at hatching in every state of the Union; wonderful results reported from the cold and low lands in Canada; the hot climate and high altitude in Mexico. From the dry country in Colorado and the damp atmosphere in the New England States, and hot South America; from 6,000 feet above the sea level in India; the mild climate in Australia; far eastern Japan and every country in Europe. We outatched them all—home, as well as all leading foreign makes.

We Have the Records to Prove This

WILL AN INCUBATOR PAY?

The answer is "yes" most decidedly if you get the right incubator and run it right. It takes about equal proportions of these two factors to get results.

What matters the utmost care if at a critical moment the regulator goes awry? Three weeks of careful attention and utmost vigilance may be lost in a single night.

The damage may be done more slowly, too. A door that does not close tightly, a joint that leaks in a little cold air may spoil egg after egg.

To make money you must not waste your eggs, oil or time. You cannot afford to fool with a poor machine. Did you ever stop to think that what a poor machine wastes for you would in a few hatches pay the difference on a first-class incubator?

Of all the hatching machines on the market there is none more dependable and reliable than the Victor Incubator

and Brooders. They are made by the George Ertel Co., of Quincy, Ill., whose ad will be found elsewhere in this issue. You will make no mistake in getting their machines. They have been selling incubators to the readers of American Poultry Journal for many years and we have yet to receive the first complaint. It will pay you to write to Ertel and get their new catalogue telling about their new side regulator, which leaves the top of the incubator clear. They have a much larger lamp than the usual, which runs the machine longer without attention. The cases of their machines are made with multiple walls and are thicker and stronger. These advantages all profit the buyer of the Victor.

We have the poultry fanciers who make the breeding of Barred Rocks a specialty, and it is to them we look for the most improvement in this grand old variety, that has stood the test of time against all comers. Some eight years ago Frank J. Over-

street, Kiowa, Kan., laid the foundation of Overstreet's "Best in the West" Barred Rocks, from which he has shipped birds to all parts of the United States, standing back of them with his guarantee "to please or no trade."

If you are interested in Barred Rocks of the "better kind," write for his catalogue and price list. Mr. Overstreet says he is careful not to make any assertions or promises he can not "make good," and right there is the corner stone of his success as a poultry breeder, and it is a pleasure to do business with that class of poultry breeders.

Goodes & Palmer, Marcellus, Mich., breeders of Buff and White Orpingtons, report the following winnings at the late Chicago show: On S. C. Buff Orpingtons, 2d and 3d cockerel, 2d pullet and 4th cock. On S. C. White Orpingtons, 1st hen, 1st pullet, 4th cock and 2d pen. Also silver cup for best cock, cockerel, hen and pullet. They purchased the 2d and 3d cockerel to head their best pens this season. This winning demonstrates that this firm has the right quality in their stock, and our readers would do well to look up their ad in this issue and write them for prices on stock and eggs. Mention American Poultry Journal.

Gus A. Lengfelder, of Mt. Vernon, Ill., writes us that he knows it pays to raise the right kind of poultry and advertise in the right poultry paper. He says the next day after he received the American Poultry Journal, containing his new ad, he got inquiries from various points in the United States. This speaks well for the American Poultry Journal and Mr. Lengfelder's fine birds. He breeds B. P. Rocks, Bronze Turkeys, Toulouse Geese and Pekin Ducks. See his ad in this issue.

Mr. B. Graham, Calcutta, O., won at the East Liverpool, O., show this season as follows: 1st cock, 1st hen, 1st and 2d cockerel, 1st, 2d, 3d and 4th pullets; 1st, 2d pens, special cup for best display for the third consecutive year, on S. C. Brown Leghorns. His cockerels scored from 94 to 94½, and females from 93½ to 95½, and cock bird 93½. Nothing more need be said when such winnings as these are considered. His ad appears elsewhere in this issue.

A. Bloom, of Rochester, Pa., captured from the East Liverpool boys, at their recent show, 1st cockerel in Barred Rocks, 1st cock, 2d pullet and 1st pen in S. C. Black Minorcas, his birds scoring very high. You may look to hear further from Mr. Bloom at coming shows this season, as he has the "stuff." Write him for prices.

We Have a Special Price and a Free Book Waiting for You

Will You Send a Postal For It?

WHY not get into the wholesale, down-to-bedrock-factory-price buying class this year? What's the use of paying the long profits? We'll make you a wholesale special agent's price on an Incubator and Brooder, direct, that will surprise you. Every man or woman going into the poultry business for profit should get this price and full particulars. We make Racine Incubators and Brooders—and sell them on liberal Free-Trial plan, freight prepaid. These machines have all good improvements. They are the result of 28 years of practical experience of the oldest Incubator and Brooder operator in the country. We've tried all kinds of incubators and all ways of hatching chickens. The RACINE way has brought us the best results and will do the same for you.

Our experience is all free to you with the Racine machines, and, with these machines, insure you absolute success. Why bother with uncertainties? 28 years gives a man lots of time to make all the tests. You get—free—the benefit of our successes to make your successes sure. Our machines are guaranteed to hatch more and healthier chicks than any other machine made—and the price—we'll fix the price right. Just give us the chance—both on our Incubator and on our hot-water Brooder. Write today for price and full information. Address

THEY LIKE THIS.

Women deserve consideration. Their days are long enough, full enough and hard enough under the best conditions. They appreciate everything that lightens their work. They like the simple, sanitary Sharples Dairy Tubular Cream Separator because it is a remarkable labor saver. The Dairy Tubular Bowl is so free from inside parts, so light, so easy to wash thoroughly clean. The accompanying picture shows all there is to it. Just as light, simple and easy as it looks. In the young woman's right hand is the bowl itself, as smooth inside as outside; on the little finger of the left hand is the tiny dividing wall—a smooth, instantly removable piece that slips into the upper end of the bowl and is used merely to assist in guiding the cream to the cream outlet—the only piece that goes inside the bowl; between the thumb and finger of her left hand is the bowl bottom, which screws into and thus closes the lower end of the bowl. A child

it? Use a little forethought this year. Don't wait until the chicks are dead. Do it now.

When the chicks are hatched put them into brooders the floors of which are well sprinkled with Dustyne. If you are using hovers put Dustyne plentifully under the hovers. If the chicks are to be raised with the cluck, dust her thoroughly with Dustyne before setting. Or if it is too late for that, dust her well before giving her the chicks and sprinkle Dustyne over the floor of the brood coop. Not very much work, is it?

And for want of a thought you might have let all of those future prize winners die.

We say again with the street car people—Better be safe than sorry.

J. J. Bleakley, Abilene, Kan., breeder of Buff Rocks, has made a wonderful record with his stock in the show room during the past season and reports that he has some choice breeders to dispose of. He has mated up some very choice pens and will supply his customers with eggs from the

Let Your Hens Judge

Their Verdict will be

"EGGS ALL WINTER FOR YOU, IF YOU FEED US FRESH CUT BONE."

There could not be any other verdict, because hens *must* lay if you feed them such egg-making food as fresh cut bone.

Two tablespoonfuls of fresh bone, cut in a HUMPHREY Always Open Hopper BONE CUTTER, will give you all winter more eggs than your hens lay in summer, and a total of 150 to 250 eggs a year per hen. Record-laying hens are cut-bone-fed hens.

Egg prices are highest now, yet your feeding bills, if you feed fresh cut bone, will be cut in two. Your butcher will give you bones.

Fresh cut bone, prepared in a HUMPHREY Always Open Hopper BONE CUTTER, and fed daily, will start your hens laying in about two weeks' time, and they will keep on laying.

Think of getting from 40 to 50 eggs a day from 70 hens all through the winter, and some days as high as 55 eggs? This is not an exceptional record for poultrymen who use the HUMPHREY BONE CUTTER—the only machine with an Always Open Hopper.

Send to-day for my new book with illustrations in colors. It is filled with Poultry Secrets and guaranteed Poultry Helps that will always help you make money on your poultry.

I also make the HUMPHREY CLOVER CUTTER, the HUMPHREY BROODER—the brooder that saves chick life—the HUMPHREY GRIT CRUSHER, HUMPHREY BONE and FEED MILL, HUMPHREY CORN SHELLER and other HUMPHREY POULTRY HELPS—but no poultry feeds or remedies.

**HUMPHREY, White Street Factory
Joliet, Ill.**

Economy Beef Scrap

Guaranteed analysis, 65% Protein. Why not feed the best and get better results from your poultry. Economy Beef Scrap is made from fresh beef trimmings cured by a special process, rendering it perfectly sweet and wholesome and without that fertilizer smell. Contains no hair, hides, tankage or other refuse usually found in the ordinary kinds. Keeps indefinitely.

Price, \$3.25 per hundred; \$1.75 per 50-lb. sack; F. O. B. Buffalo.

On order for 200 lbs. or more we prepay freight east of the Mississippi River.

Write for discount on quantity orders. Sample on request. Prompt shipments.

BETTY & SUNSWICK

S. C. BUFF ORPINGTON HEN.

Winner of first and special. Madison Square Garden, 1910. First prize, Baltimore, Md., 1910. Bred and owned by Sunswick Poultry Farm, South Plainfield, N. J.

can clean the entire bowl perfectly in three minutes.

The handsome 1910 catalogue of the Sharples Separator Co. explains the principles back of the invention of Tubular Separators and describes how this remarkably simple bowl easily generates sufficient skimming force to do the work required of it. You should write for this catalogue and mention this paper. Address The Sharples Separator Co., West Chester, Pa.; Chicago, Ill.; San Francisco, Cal.; Portland, Ore.; Toronto, Can.; Winnipeg, Can.

BETTER BE SAFE THAN BE SORRY.

This is a sign which the Chicago City Railway Company have placed prominently in their cars to warn their passengers to be careful. We would like to see that placard placed before every poultryman in the country who is hatching or who expects to hatch little chicks this spring.

What percentage of chicks did you lose last year of those you hatched? What percentage of that loss was due to lice, mites and insanitary conditions? It makes you sad and sorry even to think of it, doesn't

same pens as he expects to get his prize-winners from for next season. Write him and mention American Poultry Journal.

Rosemont Poultry Yards, Elmer V. Shultz, proprietor, Webster Grove, Mo., has been constantly advertising in these columns for a number of years, which proves that Mr. Shultz is in the business to stay, and his winnings during the past have demonstrated that he knows how to produce the good ones. At the late Missouri State Show, in one of the strongest classes of Single Comb Brown Leghorns ever gotten together, he won third cock, third cockerel and fifth pen, and at the late Kansas City Show, on three entries, he won first cock, fourth hen and second pullet. Choice pens mated for the season's trade. Write him and mention American Poultry Journal.

Lester Tompkins, Concord, N. H., the noted R. I. Red breeder, won shape and color special on male at the late Madison Square Garden show. See his complete list of winnings in the New York show report in this issue.

LULLABY BROODER.

The Lullaby Brooder, invented and owned by Messrs. Park & Pollard, of Boston, Mass., simplifies in a very marked way the brooding of incubator-hatched chicks. Practical poultrymen who have had an opportunity to see it in operation pronounce it the greatest invention in poultry appliances in the last quarter of a century.

It broods the chicks like a hen, and will take care of four times as many. No experience whatever is required in operating it, and as no artificial heat is used in its operation, it does not affect the insurance rates of the buildings adjacent to that in which it is used.

It is easily adjusted to the different stages of chick life, from the incubator to the colony coop. This is one of the features that the old-style brooder manufacturers could not anticipate. Brooders that provided the right heat and air conditions for baby chicks were much too small and stifling for three to six weeks old birds. The Lullaby Brooder literally rose with the chicks. It does away with the old trouble of "hover-breaking" by hand. The machine is so constructed that the chicks learn this themselves.

Another important point is the fact that it is the most sanitary brooder on the market. It is absolutely germ proof and greatly lessens the liability to bowel troubles. It can be used in any pen or house indoors, or it may be used as an outdoor brooder simply by providing a box to keep out the wet and snow.

It is sold delivered for the remarkably low price of \$1.50, all transportation charges prepaid, and the manufacturers agree to return the money and pay the return charges if you are not absolutely satisfied after seeing it.

AT THE MILWAUKEE SHOW.

Geo. H. Bie, the well and favorably known breeder of Barred Plymouth Rocks, has just made another grand winning at the Milwaukee (Wis.) Show, winning 1st, 2nd, fourth pullet; 2nd, 3rd, 4th hen; 3rd, 4th cockerel; 1st, 3rd pens, and all specials but one. Milwaukee is noted for the strong class of Barred Rocks that are shown each year, and win like this goes to prove that

Mr. Bie knows how to produce the right kind. Mr. Bie has been breeding Barred Rocks for a great many years and has won the blue at all the prominent shows in the West, and his stock is second to none. He has mated up a number of extra choice pens for this season and is now prepared to fill orders for those who want some extra good in this variety. He can also supply a few more of those extra choice breeders at reasonable prices, and if they are not satisfactory they can be returned at his expense and money will be refunded, therefore customers are not taking any risk when they order from him. Write him today and mention American Poultry Journal.

MOISTURE INSURANCE.

Millions of chicks die in the shell every year. If this loss could be covered by in-

urance, there would be an annual money-saving of several millions of dollars to the poultry raisers of this country. Ignorance

of the moisture question is the principal cause of this immense loss.

For years and years the so-called poultry authorities have written and debated upon this very important question. Theories were advanced and tested, but with the same result—dead chick in the shell, either drowned or dried up. Moisture gauges were devised and tried, with practically the same result. Everyone agreed, however, that a gauge or indicator was necessary, and finally an instrument was invented which was called a Hygrometer.

Realizing the importance of an absolutely reliable instrument for determining and regulating the moisture or humidity in the egg chamber of an incubator, the Taylor Instrument Companies of Rochester, N. Y., turned their experts to making such an article, and the Tycos Hygrometer is the result of their skill. The "Tycos" Hygrometer represents the same degree of accuracy as do their famous "Tycos" Thermometers. The same care, the same skill, the same sixty years of experience back of their thermometers, is also back of the "Tycos" Hygrometer.

Incubator manufacturers who are really desirous of protecting their reputation are equipping their machines with the "Tycos" Hygrometer as well as the "Tycos" Thermometer. Don't buy an incubator unless so equipped. Insist upon having the "Tycos." The "Tycos" Hygrometer is also sold by dealers in high-grade poultry supplies. "Temperature Facts Worth Knowing" is the title of a booklet issued by the above manufacturers. It's free. Send for it today, mentioning American Poultry Journal.

Every farmer will be interested in the new seed catalogue just issued by R. H. Shumway, Rockford, Ill. It contains hundreds of beautiful illustrations and is a perfect mine of information on all kinds of garden and flower seeds. Mr. Shumway has built up an immense business by giving every customer a fair deal and selling good seeds cheap. Send for his catalogue today.

In the strongest class of White Orpingtons ever assembled in America Lawrence Jackson, Hayesville, Pa., won second pullet and third with birds that have exceptional quality. He can please you with anything you desire in this variety. Write him and mention American Poultry Journal.

RED, RED REDS

—ROSE COMB REDS—

I breed Reds that are red to the skin, with the correct long-bodied type that is called for in the Standard. Hence they please the Judges and win in the strongest competition in the country. I not only raise a few good birds, but lots of them; to prove this I put out two strings of birds at the same time and my birds were

Winners at the Great Missouri and Oklahoma State Shows

At Enid, Oklahoma, State Show, a show of 3,200 birds in a hot class of Reds I won 2nd cockerel, 3d cock, 1st, 2nd, 3rd pullet, 1st pen, special for best shaped male, special for best colored male, special for best shaped female, special for best colored female, special handsome silver cup for best pen and special handsome silver cup for best pen in the show. This, the most coveted prize in the show, was awarded me by three Judges consulting together. These winnings clearly stamp my birds the best R. C. Reds in the Southwest. Read what Judge C. W. Zimmer says, "To Whom It May Concern—I awarded the above prizes to Mr. Robert Bretz, and I consider his birds exceptionally fine specimens and eggs from these birds are well worth the price asked—\$10.00 per 15. Respectfully,

C. W. ZIMMER, Judge."

Eggs from Prize-Winning Pens

Have mated up some grand pens, each one headed by a prize-winner, from which I will sell eggs for \$10.00 per 15. Eggs from farm range stock, \$2 per 15; \$10 per 100. Don't delay. Order today. Send for mating list and mention American Poultry Journal.

Robert Bretz

EGG MAKER

I Have Ten Hens and Get Ten Eggs Each Day

by feeding "Lee's Egg Maker." Without waiting another day, go out and count your hens—count them carefully. For a week keep an accurate daily record of the eggs you get. The guarantee below means you.

WE GUARANTEE

that no matter what you are feeding, and regardless of the number of eggs you are getting at the present time, if **Lee's Egg Maker** is added to the daily ration—made a portion of it—the increased egg yield resulting therefrom will more than pay the cost of the Egg Maker, cost of labor required, and **100 per cent profit** on said labor.

We don't care what your hens are doing now, we ask you to buy Lee's Egg Maker on our **guaranty** of an increased egg-production at a **reduced** feeding cost. Could we make you a better proposition?

The amount of good **digestible** protein is what counts for results in poultry feeding, and America's big feeders say Lee's Egg Maker contains more **digestible** protein than any other poultry food they can buy.

Lee's Egg Maker is almost entirely a meat food and with an actual tested protein feeding value in excess of 80 per cent, and you'll find it in the essentials entirely lacking in other prepared poultry food. The best feeding authorities in the country endorse it—and use it. You can't afford not to feed it, whether you have 10 hens or 1000, the proportionate profit would be the same.

Price: 2½ lb. pkg., 25 cts.; 25 lb. pail, \$2.00. Ask your dealer or send direct to us. We pay freight in 100 lb. lots.

GEO. H. LEE CO.,

1101 Harney Street, Omaha, Neb.

LEE'S GERMOZONE

PROTECTED BY A GUARANTY BOND.

The Bankers' Surety Company, of Cleveland, O., has put out an issue of bonds, backed by their entire capital and surplus, amounting to millions of dollars. The entire issue backs the guarantee of the Sure Hatch Company, of Fremont, Neb.

One of these bonds will actually be sent out by the Sure Hatch Incubator Company to every purchaser of a Sure Hatch Incubator. This company has always given a liberal guarantee with their machines. They will continue to send this guarantee with their machines, and with it you will get one of the surety bonds, backing up the guarantee.

The Sure Hatch is the only bonded incubator on the market. It is in a class by itself. There are others which look somewhat like the Sure Hatch, but they are not up to the Sure Hatch standard. We guarantee to hatch all fertile eggs in the severest weather.

You'll find it a great satisfaction to know you are holding a cash bond guaranteeing results when you have spent good money for an incubator.

Write to the Sure Hatch Incubator Company, at Fremont, Neb., and get full information about their bonded incubator before you buy a machine where you are compelled to take long chances. Investigate the real merits of the Sure Hatch, then buy.

Please mention American Poultry Journal when you write.

SCIENCE AGAIN AIDS THE FARMER.

Dollars and cents leak out through little rips and rents which are left unattended. All too often if the first little hole or break had been repaired it would have later saved the buying of a new pair of shoes, etc., etc.

Most of us appreciate the value of a timely stitch, but in case of need it is seldom that the proper facilities for repairing are at hand.

A clever man has solved this problem by inventing an awl which is a perfect little hand sewing machine. Small enough to be carried in the pocket, yet it makes a strong, durable lockstitch and will mend anything from a thin fabric to heavy shoe or harness leather.

By carrying it constantly one is prepared for all sorts of emergencies and it has the further advantage of being simple enough for a child to use.

Naturally such a handy little tool finds much favor with all thrifty farmers and, indeed, the makers—C. A. Myers Company, 6537 Woodlawn avenue, Chicago—are kept busy supplying the demand.

So many agents have pronounced it a "lightning" money-maker that a most interesting little book has been written about it. To any reader of this paper who requests it a copy of this book will be sent free.

H. E. Challis, South Danville, N. H., breeder of Single Comb Buff Orpingtons, won at the late Boston show on six entries, 4th cock, 5th hen, 4th cockerel, 5th pullet and 2d pen. Mr. Challis was also a winner at Madison Square Garden in 1908-9. In another column of this issue you will find his ad. Look it up and write him for full particulars. Mention American Poultry Journal.

H. L. Logue, Neponset, Ill., breeder of Bred-to-Lay White Wyandottes, reports that his farm range flock, consisting of 100 early hatched pullets, has given him an egg yield during the past month of about 50 per cent, and that he will sell eggs from this flock, as they run, for \$5 per 100. This is a good opportunity to get started at a small cost with a good laying strain. Mention American Poultry Journal when writing him.

You can buy fence at wholesale prices—14½ cents a rod up—if you write Kitselman Brothers, of Muncie, Ind., for their free catalogue. See their ad in this issue.

Is the Best Roup Cure I Have Ever Tried

Among the many who say that are a lot who never thought Germozone would do it. Geo. H. Lee knew what Germozone would do before he placed it on the market. It is so good that users are not tempted to accept a substitute. No one ever found anything so good. The reason is plain—Germozone has no equal.

500 HENS SAVED

A Missouri poultryman writes that 8 bottles of Germozone saved his entire flock of 500 hens from Roup. Less than one cent per hen. A Pennsylvanian writes that Germozone would be cheap at \$5.00 a box—and it will do for you what it has done for others. This advertisement is addressed to you. We want your poultry to make more money for you. We want you to recognize the importance of healthy poultry. The health of the chick or the hen is as important to it as your own health is to you. Ever stop to think about it? Perfect health is necessary for positive profit. Try Germozone and test every statement made here. No need to buy a substitute. If your dealer cannot supply you we will mail it to you, postpaid, on receipt of price—50 cts.—and will include free a copy of "Chicken Talk," written by Mr. Lee himself.

GEO. H. LEE CO.,

1101 Harney Street, Omaha, Neb.

General Agents in all principal cities. Write for name of one nearest you.

Germozone is a tonic; a bowel regulator. Not an infallible cure for every disease of poultry, but admittedly the best preventive and cure for all poultry diseases.

EVERY POULTRY RAISER should read the valuable new book, by R. R. Root, "The Truth About the Moisture Problem"

It gives the reason for the excessive "drying" of eggs under artificial incubation. It tells how to hatch big—strong—healthy chicks—that grow and thrive. Tells why so many eggs fail to hatch.

This book,—together with a booklet on "Artificial Incubation and Brooding," sent postpaid for 25c (coin or stamps). THE ROOT INCUBATOR CO., Box 19 CLEVELAND, OHIO

AS POTATO SPRAYER — AS ORCHARD SPRAYER

THE NEED OF EVERY DAIRYMAN

both large and small, has certainly received careful consideration by the American Separator Company, whose latest introduction in cream separators has created a wonderful interest, for while good machines have been sold at less than \$100, it was regarded, by those supposed to be in a position to give an opinion, as absolutely impossible to make and sell a separator for very much less. This idea, however, has been ruthlessly demolished by the American Separator Company offering a complete, up-to-date, well-made cream separator for \$15.95, guaranteed to skim equal to any separator made, no matter how much more it costs. Certainly at this price everyone owning a single cow or more will have a separator.

These machines are shipped on a good liberal trial and freight charges paid both ways if you do not find it ahead of any other separator. It is easy to operate, any woman or fairly grown child being able to run it sitting down. It skims one quart a minute and is just the thing for a small dairy, hotel, restaurant or private family. It will make more and better butter; will make thick or thin cream by merely turning a small screw and will purify the milk by extracting all the foreign substances contained therein. To one who does not know, it will be a revelation to see what stable refuse milk contains, too fine to be caught

in a strainer, but which this separator completely removes.

The machine being made and sold by the oldest exclusive manufacturers of hand cream separators in the United States is of itself an assurance of genuineness, and our readers need not for one moment hesitate to approach them; in fact, everyone interested at all in cows should write the American Separator Company, Box 1158, Bainbridge, N. Y., for their \$15.95 proposition. They will send it free, postpaid, together with their handsomely illustrated catalog describing their full line of separators of all capacities and also explaining their system of selling direct to the user, saving all agents' and middlemen's profits. The value offered will surprise you and you will realize how this company has studied and worked to produce a machine especially suitable in capacity and price for the small dairyman whose use of a separator heretofore has been largely prohibited by the high prices asked for large capacity machines.

A NEW "MODEL."

The Model Incubator Co., of Buffalo, N. Y., are calling attention to their Model "B" Incubator, designed for those who are just starting the poultry business or who do not feel that they can afford to purchase one of their standard machines at retail from \$16 to \$48. The Model "B"

Incubator is not made to meet competition with cheap machines on the market, because it contains all the advantageous features of a high-grade machine. The saving of price is due to making the entire outer case with the exception of the front of enamel sheet iron and making the incubator in large quantities so that the cost of production is very low.

They have not advertised it extensively because they have waited to test it out thoroughly before offering it as a high-grade model incubator. Experiments prove that this machine is guaranteed to give excellent results. It is equipped with famous Model Corrugated Leaf Thermostat, accurate Model Thermometer, heavy insulated galvanized iron heater, lamp, etc., except the 50-egg size, which has a double disc regulator.

It has double walls, air space between, well packed with a good non-conductor. The front is finished in chestnut wood and the machine presents as good an appearance as many high-priced machines on the market.

Complete description and further particulars can be had by addressing Model Incubator Co., Buffalo, N. Y.

A CHANGED QUOTATION.

First the tree, then the sprayer, then the full fruit, is not exactly a correct quotation—how many of our readers can give it?—but it is a correct statement of modern orchard conditions necessary for a big crop.

Every orchardist knows that he must protect his fruit trees from insects, blight and similar pests or he will not have enough fruit for small boys to club. Happily it is possible to buy sprayers of any size for any purpose, or, more truly, for every purpose. Thus the Hurst Manufacturing Company will send you any sprayer they make—from the barrel size up to the mounted wagon sprayer—upon your asking for the one you need.

The price is reasonable, and payment is made still easier by the fact that you do not have to pay until after you have gathered your crop. Then, the increased crop will generally be enough to pay for the sprayer and leave you a profit besides.

Our readers who are familiar with the Hurst sprayers will be interested particularly in a mounted sprayer which has been added to their line, thus completing this excellent line, and giving a sprayer suitable to the largest orchard or garden as well as the small.

In another column will be found a fuller announcement of the unequalled offer made by the Hurst Manufacturing Company, and it will certainly be the part of orchard or garden culture wisdom to send for their complete catalogue—a new edition of which has just been printed. Besides full descriptions of the different sprayers this book is a compendium of valuable information to every grower.

Send a postal today for your copy to the Hurst Manufacturing Co., Canton, Ohio.

NOT 15% FUEL SAVING, BUT OVER 75% FUEL SAVED BY THE CANDEE HOT WATER BROODER SYSTEM.

Through clerical error in copy the January advertisement of the Candee Hot Water Brooder Co. stated that their system is 15 per cent cheaper than oil to operate. As a matter of fact, experimental work shows that where brooding with oil heaters costs \$16 for oil, in the Candee system the hot water heater consumes but \$1 worth of hard coal. This means that the Candee Hot Water Brooder Heater is fifteen times cheaper than oil.

The Candee Hot Water Brooder Co. have recently installed two large brooding systems for G. K. Gillette, Central Valley, Conn., "The Sugar Brook Farm."

Other recent installations have been made for—

The Yesterlaid Egg Farm Co., Pacific, Mo.
H. F. Meister, Nursery Mo.
H. C. Brummer, Suffern, N. Y.
W. H. Graurmer, Howell, Ind.

PARTRIDGE PLYMOUTH ROCKS.

S. A. Nofztger, Manchester, Ind., the originator of Partridge Plymouth Rocks, is preparing a book on the origin and history of this variety, which will be ready for mailing in a short time. If you are interested in this beautiful variety of fowls send him 10 cents for a copy.

Do You Want a World's Champion Incubator?

At a recent incubator trial conducted by the Government Poultry Expert at the New Zealand International Exposition, a Reliable Incubator made the World's Hatching Record. When you buy a Reliable Incubator you have the World's Champion Incubator, and made by the House of Quality.

Reliable Incubators have won 648 prizes at international exhibitions and incubator contests in this country and throughout the entire world.

We build incubators different from most makers. We make the whole incubator—everything in our own factory—the largest of its kind in the world.

We have made incubators for 28 years and had years of experience in the poultry business before that, so Reliable Incubators have something more in them than just quality. They have success guaranteed.

You ought to get the "Reliable" book that tells all about incubators—the Reliable Incubators especially. It tells all about poultry raising, too. There isn't any other book like this, and there isn't any other incubator like the Reliable. Don't buy an incubator till you read it.

We Want to Sell You

Write for book now—it's free.

RELIABLE INCUBATOR & BROODER CO., Box C1, Quincy, Ill.

The Reliable

(2)

28
Years
of
Success

"QUEEN INCUBATOR MAN" MAKES INTERESTING DIS- COVERIES.

Sixty-two out of every hundred buyers of good incubators do so well that they add more incubators and raise more chickens in a short time.

Seventy-six out of every hundred incubator beginners, attracted and misled by low-price talks, buy poor incubators the first time and then buy good ones.

Twenty-four out of every hundred beginners buy good incubators at the start.

These interesting deductions are given us by Mr. P. M. Wickstrum, familiarly known to poultry readers as the "Queen Incubator Man." He is a widely recognized authority on poultry and incubator matters. The figures are based on his last year's sales, which were so large as to be a fair basis on which to judge general incubator conditions.

While Mr. Wickstrum has always been a persistent advertiser and given his customers the most liberal terms—free trial, freight paid, factory price, long time guarantee, etc.—he says that in the end his success in selling Queen Incubators is really due to his customers' success in using them. This must be correct, or he could not have sold 62 per cent of his last year's output to people who, at the time of ordering, were already using Queen Incubators.

It is important to note that a large percentage of poultry beginners are still being lured by loud talk into buying poor machines, and then, from the experience they get, they buy good ones. Such a proceeding, it seems to us, is entirely unnecessary and certainly rather expensive. Any good incubator is a big money maker and there are a number of good ones to be had at a reasonable cost. Beginners and others will do well to consider what they are getting as well as what they pay.

If you do not want to experiment with incubators, you will do well to investigate the "Queen." We know of none better and we know Mr. Wickstrum to be one of the fairest and most reliable men you can deal with. He will take pleasure in sending you his latest books on incubation and helping you, without charge, in any way he can, to make increased profit this year from your poultry.

We urgently advise every reader to consult Mr. Wickstrum and get his free book before making a final purchase of an incubator. Just address him as in his advertisement in this paper—"Wickstrum, the Queen Incubator Man," Box 4, Lincoln, Neb. Mention our paper if you wish.

UNEXCELLED STRAIN AS BRED BY F. GAGE CUTLER, CARTHAGE, ILL.

There are a very few breeders that have made more strenuous efforts in the past few years to produce the greatest combined laying and winning strain of fowls than F. Gage Cutler, of Carthage, Ill. To begin with he spent a large sum of money to secure a number of the very best birds he could secure from some old reliable breeders that had been breeding their birds for great egg production and for the highest standard requirements. Since then he has been using every effort to produce a strain as near ideal as he can, which is his great ambition.

His specialties are Barred and White Rocks, White Wyandottes, Buff Orping-

tons, Bronze and Bourbon Red turkeys, Pekin and Indian Runner ducks. They are bred on two 80-acre farms, where the young stock has fine chance for development.

In his yards he has many birds scoring 95 to 96½ by such judges as Russel, Hale and others. His White Rock cock bird, value \$1,000, is surely a wonder. He scored 95½ by Russel and out of this was cut ½ on "dirty feathers." The bird was taken to the show, not being conditioned at all, as Mr. Cutler knew him to be a winner and did not have the time to condition him. If he had been conditioned as many condition their birds, Mr. Cutler thinks he would have scored 96½ to 97 points. He

ary to close out his surplus stock and on eggs ordered early and part paid on the order so he will know about how much breeding stock to retain.

And one interested in Mr. Cutler's specialties should write him about his birds or send for his free catalogue. He is always glad to answer inquiries. Our paper is the only paper he has a large add in this month. He tells that in the future he will not advertise with many papers and will give his customers the advantage of this saving, as he has found through experience that he gets far better and cheaper advertising by pleasing his customers and letting them do the advertising for him.

WHITE PLYMOUTH ROCKS.

This pair, valued at \$1,500. Owned by F. Gage Cutler, R. 13, Carthage, Ill. They are wonders. The hen having won at Madison Square Garden, Jamestown Exposition and Minnesota State Shows. The cock scored 95½ by Russel after being cut ½ on "dirty feathers."

also has some New York, St. Louis, Minnesota, Iowa State Fair and state show winners in his yards, both in White Wyandottes and White Rocks. He also has some great birds in his Barred Rocks and Buff Orpingtons, although he has not spent so much time in showing them. However, he has some birds that will make great winners and they have been bred for the greatest possible egg production for years.

His bronze turkeys have won at Madison Square Garden, Missouri state show, Iowa State Fair and such shows, and he feels as if he has as fine turkeys as can be found in the United States.

He makes special inducements for Febru-

See his ad on another page and write him for further particulars.

In a strong class of Reds at the East Liverpool, O., show this season I. S. Bailey won first cockerel, having made only two entries, while in his yards are to be found many other good classed birds. Look up his ad elsewhere in this issue.

If you want to save money on your purchase of fence write Kitzelman Brothers, of Muncie, Ind., for their free catalogue. They are selling fence direct to the farmer on 30 days' free trial for 14½ cents a rod up. See their ad in this issue.

Why Poultry Pays.

How to Make It Pay.

BY
MORGAN BATES.

Price, 50 Cents

PUBLISHED BY
AMERICAN POULTRY JOURNAL,
358 Dearborn Street,
CHICAGO, ILL.

WHY POULTRY PAYS AND HOW TO MAKE IT PAY

A book for the beginner in poultry raising and for those engaged in it who are interested in securing from the business the greatest profit obtainable. This book tells you how to start right, how to succeed with poultry, how to line breed, how to win at the shows, how to breed and prepare fowls for market, how to feed for the production of eggs. Also contains a chapter on Poultry Diseases and simple remedies for same. Gives instructions on incubators and brooders and much other valuable information, and is profusely illustrated with ideal drawings of Standard fowls.

We are selling this book at the popular price of 50 cents. This book and one year's subscription to American Poultry Journal for only 75 cents. Send all orders to

THE WINONA FARMS.

A Successful Pennsylvania Plant That Is Coming Into Prominence.

After paying a visit to these farms a representative of Poultry Item says: "This is a day of big things in the poultry world. We hear of large plants starting all over the country, but we want to call the attention of our readers to the fact that the Winona Farm is not a new plant in one sense of the word. Like the start of an

W. K. WIXSON,

Owner of the Winona Farms, Lansdale, Pa.

oak tree, it grew from a little acorn until today it covers many acres, devoted to the development of the Single Comb Rhode Island Red and Single Comb White Leghorns. The plant is located near Lansdale, Pa., practically in the suburbs of Philadelphia, and on account of its easy access is visited by many people.

"A number of years ago Mr. Wixson, the proprietor, started in the poultry business with only a few birds, of which he made a careful study in addition to keeping an account of the expenditures and the income. He discovered that there was money to be made in the poultry business. He then set to thinking about the best kind

F. E. STEIGER,

Manager of the Winona Farms, Lansdale, Pa.

of a poultry farm to establish and was puzzled at first to decide whether it would be for exhibition stock or an egg farm. After much careful study, figuring and experimenting, he came to the conclusion that a flock of line-bred birds, that were bred for heavy laying, vigor and vitality, that had exhibition qualities, was what he wanted. He went to work building up his Single Comb White Leghorns and Single Comb

Rhode Island Reds precisely along this line. How well he succeeded and how near he hit the mark he was aiming at can be better told by a visit to the plant than in writing. Having had the pleasure of visiting the plant in October, I was very much surprised to find such a large and prosperous plant within twelve miles of where the item is published and within thirty-five minutes of Philadelphia. But, as previously stated, Mr. Wixson worked along quietly and carefully, perfecting his birds and increasing his plant and equipment according as business warranted, until today he has one of the finest and best equipped plants in Pennsylvania. It is stocked with a lot of birds that for quality, vigor and vitality have no superiors. It is difficult to say just what variety Mr. Wixson excels in, but we cannot help but praise his Reds, which constitute a flock of evenly colored birds that will produce beyond all doubt more than a fair percentage of exhibition specimens. The birds are carefully mated and selected; no culls on the place. It is the intention of the management here to give the customer the chance to raise show birds by selling them eggs for hatching and baby chicks from the same matings that they use themselves, and in this we can heartily endorse them. The plant is beautifully located on high ground and young stock is grown on free range and quartered in colony coops over the farm.

"We could not help but admire the excellent order of the stock, plant and buildings under the care of Manager F. E. Stieger, an experienced, down-to-date poultryman, who has grown up in the business and largely through his efforts, knowledge and ability has placed the Winona Farm in a prominent position before the poultry world. He has met and overcome keen competition at such shows as Trenton and Norristown. We are positive a visit to the plant of the Winona Farm will be money well spent and valuable information gained. They have also taken the eastern agency of the Norwich Automatic Feeder Company and are doing a large business in feeders."

AT THE ST. LOUIS SHOW.

Bickerdike's pedigreed White Rocks gave another evidence of their high quality as exhibition birds at the great Missouri State Show held at St. Louis, December, 1909. This great show holds the world's record for number of birds shown in an exclusive poultry show, and in such a show as the St. Louis show, with 5,500 birds in competition, many valuable birds must necessarily go without any prize.

The White Rock class was one of the strongest in the show, and represented 33 breeders, some of whom have been exhibitors at the nation's greatest shows. The class included birds that had previously won the blue at such shows as Chicago, Indianapolis and other great shows. Competition was so keen that birds valued at \$250 did not get so much as a fifth prize.

In this strong class Mr. Bickerdike won 3d cockerel, 5th pullet, 1st and 4th pen. His first pen was headed by his cockerel that won first at the Illinois State Fair in October, 1909, and was a pen of such quality that Judge Russell commented on the excellent mating and correct type of the four pullets included in the first pen.

This St. Louis winning adds another proof that the Bickerdike pedigreed White Rocks are unequalled in quality, and Mr. Bickerdike is to be congratulated on his

success in the showroom this season, having previously made a clean sweep at the Illinois State Fair with his pedigreed White Rocks. Every bird shown by Mr. Bickerdike in both of these large exhibits was produced by him, and he has a written pedigree for each bird, showing the sire and dam for several generations back.

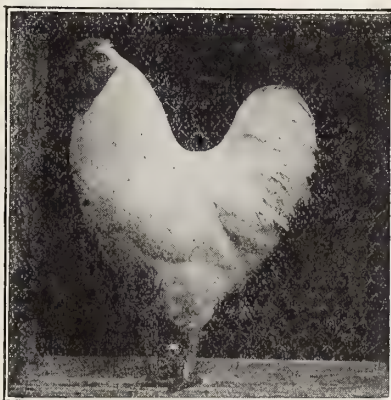

Mr. Bickerdike has a grand bunch of breeding stock for sale that are pedigreed,

WHITE WYANDOTTE.

Cockerel heading third prize pen, Philadelphia, 1909. Owned by Harry W. Britton, Moorestown, N. J.

and has just issued an illustrated circular concerning his pedigreed White Rocks, and

WHITE WYANDOTTE.

Third cockerel and special for best shaped male at Philadelphia, 1909. Bred and owned by Harry W. Britton, Moorestown, N. J.

anyone interested in this popular variety will do well to write for this free circular to Mr. J. A. Bickerdike, Box A, Millersville, Ill.

We lead, others follow.

A GREAT VICTORY AT NEW YORK AND BALTIMORE.

Bird Bros., the Bronze Turkey and Partridge Wyandotte specialists, of Meyersdale, Pa., have spent the last two weeks exhibiting their fine birds at the great eastern shows, Madison Square Garden, New York, and Baltimore, and by their winning have again proven their claim, "America's Leading Winners."

The turkey and Partridge Wyandotte classes at both shows were large and of the very best quality. The turkey and Wyandotte judges pronounced the quality the best; J. C. Kriner, the turkey judge, considered the turkey display the best ever held in the Garden, and the best he ever saw.

Their winnings at New York were, on turkeys, 1st, 3d and 5th cocks; 1st, 3d and 5th hens; 1st, 2d, 3d and 4th cockerels, and 3d and 4th pullets.

On Partridge Wyandottes, 3d and 4th cocks; 2d, 3d and 4th hens; 1st, 4th and 5th cockerels, and 2d, 3d, 4th and 5th pullets.

Their winnings at Baltimore were, on turkeys, 1st, 2d and 5th cocks; 1st, 2d and 3d hens; 1st, 3d and 4th cockerels, and 1st, 3d and 4th pullets.

On Partridge Wyandottes, 1st, 2d and 3d cocks; 1st, 2d and 3d hens; 1st and 2d cockerels, and 3d and 4th pullets.

They won 24 premiums on 29 entries at New York and 27 premiums on 29 entries at Baltimore, including 5 specials.

The above victory at America's greatest show is one that any poultryman can well feel proud of. The boys have made a record at Madison Square Garden during the last four years that stands without a peer in their varieties. These winnings surely mean quality. They report their best birds yet for sale, etc., etc.

VICTORS AGAIN.

Sheppard's Famous Anconas were again prominent among the winners at the big show held at Madison Square Garden, New York City, last month.

We are pleased to compliment H. C. Sheppard, Berea, Ohio, on his grand record at this big show.

In 1907 he won all the first and second prizes. The following year he fared almost as well, losing but one first. Again this year his birds were invincible, winning four firsts and three second prizes, proving beyond a doubt a clear claim to the world's best Anconas.

Mr. Sheppard's fame as an Ancona breeder is well known from coast to coast, in Canada and Mexico.

A visit to his poultry parks convinces anyone of the prudence of the large number of Ancona breeders who are sending to Mr. Sheppard for stock and eggs, as he has just the kind you want, if you desire to build up your flock for exhibition or utility purposes.

Charles Nixon, Washington, N. J., reports that he is now prepared to book orders for eggs from the best matings he has ever had. Charley has been breeding White Wyandottes for a good many years and has a strain that is second to none in this country, and you can depend on getting just what you order. Write him and get acquainted. He is always pleased to hear from our readers, whether they order or not.

240-Egg Reliance Freight Prepaid \$10.00

OVER 200,000 have succeeded with this machine, and now it is still further improved. Metal-covered all round—front, back, and sides, top and bottom—high-grade galvanized iron. Also metal legs and metal lamp. The **safest** incubator built; the easiest to heat; the surest to keep at exactly the right temperature. Simple as A B C; self-regulating; self-ventilating. Lumber Walls, dead air space, insulating walls, metal walls and double wooden doors—metal-covered. All complete, ready to start your hatch; no extras to buy, and freight prepaid.

Read Our FREE Book For Your Profit

The best Guide to poultry success published. A money-saving market place for Incubators, Brooders, Poultry Supplies and Thoroughbred Poultry. Contains our guarantee and tells why we can quote prices way below others. AN INTERESTING INCUBATOR CATALOG.

One of the most interesting incubator catalogs we have received this season is that of the Wisconsin Incubator Company of Racine, Wisconsin. This advertiser has made a remarkable success of a plan of selling incubators and brooders that no other concerns have followed out as yet, and that is, supplying an incubator and brooder (two machines) for only \$10, freight prepaid.

One of the features of their catalog which appeals to us very strongly is the candid, straightforward way in which they describe how their machines are made—the kind of material and fixtures that are used—and backing all this up with a 30-day trial offer that relieves the purchaser from all risk in buying these machines. It shows they have the fullest confidence in their incubators and brooders or they would not put them out on the liberal terms they do.

Another feature that impresses us is the excellent endorsements they receive from their customers, showing their goods bear out every claim they make for them when in the hands of their users, and this, no doubt, is the real reason of the unusual success the Wisconsin Incubator Company are enjoying.

At first it might seem impossible for a concern to manufacture and sell a 125-egg incubator and 100-chick brooder, freight prepaid, for \$10, but they have been doing this for years, and this year are putting out a better machine than ever, using in their incubator high-grade California redwood, which everyone knows is the best lumber that can possibly be put in an incubator.

We urge our readers to send for this excellent catalog. Read their advertisement on another page of this issue. Mention Box 50 when you write.

ORPINGTON WINNINGS AT THE GREAT ROCHESTER SHOW.

Messrs. Grannis Brothers, La Grangeville, Dutchess county, New York, won as follows on Orpingtons at the recent great Rochester show: 2d and 3d White Orpington cocks; 3d and 5th White Orpington hens; 1st and 3d White Orpington cockerels; 2d white Orpington pullets; 2d and 3d Buff Orpington cocks; 4th and 5th Buff Orpington hens; 1st Buff Orpington cockerels; 1st and 4th Buff Orpington pullets; 1st Black Orpington cock; 1st, 2d and 3d Black Orpington hens; 1st, 2d, 3d and 4th Black Orpington cockerels; 1st, 2d, 3d and 4th Black Orpington pullets; 2d White Orpington pen; 1st Buff Orpington pen; 1st, 2d and 3d Black Orpington pens; cup for best display of Orpingtons; cup for best display in English class; special for best White Orpington male; medal for best Black Orpingtons; special for best exhibit of Buff Orpingtons; special for best exhibit of White Orpingtons; special for best White Orpington cockerel; special for best White Orpington male; special for best exhibit of Black Orpingtons; special for largest exhibit of Buff Orpingtons; special for best pen of Orpingtons.

At the show they purchased the 1st White Orpington cock and 1st Buff Orpington cock, so that they now have in their yards all the 1st prize male Orpingtons. See their ads in classified columns under head of Orpingtons.

"HAS THE INCUBATED CHICK A MOTHER?"

It begins to look like our friend, Mr. P. M. Wickstrum, the Queen Incubator Man, has started something. On another page of this paper, in his incubator advertisement, he repeats his assertion, "The chick that is born in a Queen incubator won't have any mother," etc.

This revives the old question, "Who is the mother of the chicks, the hen that lays the egg, or the hen that hatches it?" After years of school house debating the dispute was finally settled in favor of the biddy that did the laying. This being true, it is quite possible and even probable that the incubated chick has a mother some place in chickenland.

But it's no easy matter to trip up a man of Wickstrum's wide experience in poultry raising. He good naturedly replies that you must read the whole sentence to get the sense out of it. He adds that poultry men and women are not so interested in whether the chick has a mother as they are in how many husky, strong brothers and sisters the chick has.

No incubator manufacturer in this country has gone into the practical side of poultry raising deeper than P. M. Wickstrum, and few have gone as far as he has in meeting the public more than half way in his business dealings. He advocates extended free trials, direct-from-the-factory prices, prepaid freight and an unqualified guarantee covering a period of five years.

"I'll go the limit," he declares, "to let readers of your paper know my incubator. If my trial plan isn't liberal enough, I'll do anything more that any man or woman suggests, if it is fair to both of us."

"I'm out for incubator business, and, fact is, I am getting it, and I don't have to depart from square, honorable business methods either, because my incubator is a wonder. Why, if Cook or Peary had had a Queen incubator along and set it square a-straddle of the North Pole, they would have had fried chicken instead of fish blubber to fill up on! My incubators are all going out and none coming in. Keeps me busy some days just reading the good letters I get from folks who try out Queens. Tell my friends I am still doing business at the old stand, Lincoln, Neb. (Box 4), and expect to be here thirty years more. One of these days I am going to print in your paper some of the letters I get from my customers, just for the benefit of your subscribers. I am certainly a warm exponent of intensive chicken farming. It's a great game. More money in it than any other kind of farm work."

KAUFMANN & WINDHEIM, ORIGINATORS OF THE FAMOUS AMERICAN BEAUTY STRAIN OF ROSE COMB RHODE ISLAND REDS, THE LARGEST EXHIBITORS OF REDS IN AMERICA.

This firm is the largest exhibitors of Reds, if not of any variety of fowls in America, and they have spent vast sums of money exhibiting in all parts of America to show the public they have the winning kind. They have gone as far west as the California State Fair, Sacramento, Cal., making a clean sweep, and again to the recent Alaska-Yukon-Pacific Exposition at Seattle, Wash., and after the long journey across the country again carried off the lion's share. Augusta and Nashville on the south, Boston on the north, Chicago and St. Louis, central, and New York on the east, always winning more than their share. Their show record is honest and hard earned. At the late New York show they won first Rose Comb cock, and this bird with their first New York and Boston cocks of last year are heading their best pens this season. No other breeder has ever had in their yards at one time the two first cocks at New York in two consecutive years.

This firm has one of the finest equipped plants in the country and raise from 1,500 to 2,000 birds each season. They have for years kept a pedigree book showing description and breeding of every bird they have bred and can tell at a glance the breeding of every bird in their pens, in which are most of their winners for the past two years.

They have been breeding this one variety for the past twelve years and their reliability is unquestioned.

They have a very handsome catalogue which they send free to all who are interested enough in Reds to write them and mention American Poultry Journal. Address Kaufmann & Windheim, Nutly, N. J.

Make Your Chickens Work!

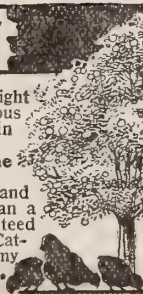

The average hen has plenty of time to help look after an orchard. With keen delight she will capture and devour any insect, pest or parasite. While these bugs, if numerous and unmolested, become harmful to fruit trees, they are very beneficial to poultry. In fact, feeding authorities claim they are the best food of all to make hens lay.

Fruit growing pays big, too! \$300 an acre is nothing unusual from Apples, Peaches, Plums, Blackberries, Raspberries, Strawberries, etc. Once planted, an orchard requires little attention.

Let me send you, charges prepaid and free, my grand Combination Catalog on Orchard Trees, Small Fruit and Farm Seeds. I am giving away 20,000 live,

hardy fruit plants, and you will get one of them along with my Catalog.

SCARFF'S Fruit Strains—trees, plants and seeds—have been famous for more than a quarter of a century. All goods guaranteed absolutely. Send for grand Combination Catalog, a Sample Fruiting Strain Plant and my Net Prices—all free. **W. N. SCARFF, New Carlisle, Ohio.**

A VALUABLE INCUBATOR AND PACKAGE OF POULTRY TONIC GIVEN AWAY.

Profits from the poultry yard are dependent simply upon the health and growth of chicks from the day they are hatched to maturity.

Perfectly healthy chicks will grow speedily into broilers and roasters. Perfectly healthy pullets will lay early and often. The only problem, then, is one of insuring perfect health.

To do this, the chicks and hens must be provided with those elements of a tonic nature which they were wont to find for

themselves in their original wild state, and which they still, in a measure, secure with ample range.

Wilbur's Poultry Tonic has been the favorite for twenty-five years with poultry keepers, because it has proven in practice the claims of its manufacturers—that it is a scientific tonic, providing just what the fowls need without over-stimulating or "forcing" growth or abnormal egg production, to the injury of the fowls.

The Wilbur Company makes a most liberal offer of a free package and a valuable "Kon-Takt" Incubator, both without cost, in order to prove the value of their tonic, direct to every poultry keeper. Their introductory premium offer is remarkable, and of such a character as to enlarge the opportunity of the poultry keeper, they depending for their final profit on the continued use of their tonic. The poultryman who has once given the Wilbur Tonic a fair tryout makes it a daily ration for his flocks in every stage of growth.

For the most liberal introductory offer you have ever had, write today for particulars to Wilbur Stock Food Company, 773 Huron street, Milwaukee, Wis.

MY BIG NEW 1910 CATALOGUE—SINGLE AND ROSE COMB BUFF LEGHORNS.

This handsome, new 8x11 catalogue, 32 pages and cover, treats of every branch of the poultry business, including the rearing, feeding, conditioning, mating and care of Buff Leghorns, also giving a complete diagnosis of all poultry diseases, and specific cures for each. This elegant book is profusely illustrated throughout, and gives complete information pertaining to poultry house and colony house construction. It also treats on successful poultry advertis-

ing—how to take care of inquiries and induce the prospective buyer to order, etc. It also contains a number of true-to-life photographic illustrations of birds, such as seen on my big poultry farm, and has a superb color cover design of a male Buff Leghorn's head and neck. The big feature of this book is a magnificent color plate insert, 8x11 in size, suitable for framing, of a delicate shade of Buff that wins the Blue Ribbons at Madison Square Garden, New York, and at Chicago shows. This book will be mailed you for 25 cents in coin. If you are not satisfied return it to me, and get your money back. But you will be both satisfied and surprised. Send for it today. F. A. Tecktonius, Racine, Wis.

THE COLUMBIAN WYANDOTTE SPECIALIST.

Aug. D. Arnold makes a very liberal offer in his ad in this issue of the American Poultry Journal, by which he expects to get eggs into every state in the Union, also into Canada. Mr. Arnold states that the eggs he has sent out the past two seasons have been the best advertisement he has had. So all who wish to get a setting of his valuable eggs free look up his offer in this issue. Only three in each state will get them, and they must mention the American Poultry Journal to do so.

GOOD SEEDS BEST IN THE WORLD PRICES BELOW ALL OTHERS

I Grow Strawberry Plants With as Great Care As You Buy Them

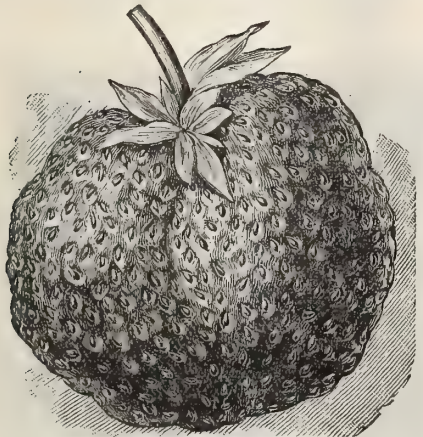

If you buy my plants you get good, strong, healthy ones that are grown in a natural strawberry country where soil, climate and season each help to make hardy and productive plants. You get plants true to name. Whether you plant a dozen or 100,000 your order can be filled promptly from the stock of 1910 plants—I never grew a finer 200-acre lot of them. Send for 1910 3-color catalog. It is free, and I want you to have a copy of it.

W. W. THOMAS

The Strawberry Plant Man
150 Main Street, Anna, Ill.

Consult Dr. Farmer

EARLY OZARK—The best early strawberry I have ever fruited, early as Michel, large as sample, productive as Glen Mary. —L. J. Farmer.

If you had measles or scarlet fever and was real sick, would you go for a young physician who has just got his "Diplomy"? No, you would send for the old family doctor who has had years of experience. There are doctors of medicine and other doctors. **FARMER** is a Strawberry Doctor. You are sick of going without good strawberries, and you want to know just how to grow them the best way. Send him your symptoms, he will help you. Get a personal letter from the "Doctor." Twenty-seven years of experience. Consultation free by mail. Medal and diploma for largest and finest display of strawberries at World's Fair, Chicago, 1893. Introducer of Norwood and early Ozark strawberries, Plum Farmer, Idaho and Royal Purple raspberries, etc. Immense stock of berry plants, all varieties. Catalog free. Address.

WHITE ROCKS AT AKRON, OHIO, SHOW.

By far the best quality in the Akron show was to be found in White Rock alley. The 1st pen shown by Jas. R. Thomas, East Akron, was easily the best pen of any variety entered, not only in natural quality but in splendid condition in which it was shown. The birds were noticeable for unusually good type, as well as for their size and color, and in the opinion of the writer would easily have found a place at such shows as St. Louis and Chicago. Mr. Thomas also won 2d cock, 1st and 2d pullet, 2d and 3d cockerel. All birds were well placed. It is not often that such consistent quality is shown in both sexes by one exhibitor, and customers of Mr. Thomas can be certain to get good results.

J. M. Moore, Jr., East Akron, made the unusual win of 1st cockerel, 2d and 3d hen and 3d pullet, on only four entries. Judge Pierce stated that the 3d hen was the best in the class but a bit overfat to show to best advantage. All were good type and the 1st cockerel was one of the

class; silver cup for greatest number of points in the show. On R. C.—1st, 2d, 3d and 5th cock; 1st, 2d, 3d, 4th and 5th hen; 2d, 3d, 4th and 5th cockerel; 1st, 3d, 4th pullet; 1st, 2d and 3d pen. On S. C.—1st and 3d cockerels; 2d and 5th pullet; 2d pen. Mr. Blanchard has about 100 cockerels to dispose of at prices from \$1 for utility birds up to \$10 for fine breeders.

W. S. Robison, of Fayette, Mo., Route 1, won at Central Missouri Poultry Association, at Marshall, Mo., November 23-26, 1909, as follows: 1st, 2d cock, 2d, 3d, 5th cockerel, 1st, 2d, 3d, 4th hen, 1st, 2d, 3d, 5th pullet, 1st, 3d, 5th pen. Club special for best shaped female. Also won Missouri state silver cup for best and largest display any and all varieties, also Missouri state cup for best and largest display one variety. At St. Louis, Mo., state show, won 1st pen, 4th pullet and best shaped female. Silver cup for best pen. St. Louis show was December 6-11, 1909, Mr. E. C. Branch judge, No. 49, in Buff Rock class.

Charles G. Pape, Fort Wayne, Ind., the well-known breeder of Single Comb Black

one of the strongest classes of S. C. White Leghorns ever exhibited at this show.

S. M. Dickinson, Granville, O., breeder of W. P. Rocks, Rhode Island Reds and Columbian Wyandottes, has mated up a number of choice pens for this season's trade and now has his mating list ready to mail. This is very attractive and neat and should be in the hands of all who are interested in these varieties. Send for one today and get acquainted with the man who is making a business of raising fancy fowls.

J. Frank Van Alstyne, Neversville, N. Y., exhibited two grand pens of his Silver Wyandottes at the late New York show, and was awarded second and third prizes. His second prize pen was certainly a grand one, and in the estimation of a great many should have been placed first, but, of course, the judge thought otherwise. He also won fifth pen on Columbian Wyandottes. Mr. Van Alstyne has certainly succeeded in producing some grand birds the past few years and deserves the patronage of anyone who is looking for something to improve their stock.

This cock and hen were declared by four judges to be the best and most typical Buff Cochins ever shown, and headed the string of champion winners and highest honors at the great Missouri State Association Show at St. Louis Coliseum, 1909, and making the largest record winnings by any one exhibitor on one class of birds of 5,500 entries in the history of United States, largest poultry show. My birds won 67½ points and 17 prizes, grand prize, champion silver trophy for best and largest display, open class, great Missouri State Association; silver cup for best male and female in Buff Cochins; \$50 silver cup at St. Charles, Mo., Centennial Show, 1909, offered by the Missouri State Association on Cochins, and \$5 gold special for best display. Owned and exhibited by Dr. A. A. Gossow, St. Charles, Mo.

best the writer has seen at the big shows this winter. He had extra good length in back, with low carried, well spread tail, stood well on large boned legs and had an extra good comb to top off with. In color he was unusually white, the combination making him a particularly valuable bird to head a breeding pen. We understand that Mr. Moore will mate him to his winning hens and others of equal quality. Buyers of his eggs ought to get some splendid results.

Chas. H. Ring.

A. W. Blanchard, breeder of Rose Comb R. I. Reds, of Beloit, Wis., was fortunate in winning fourth on his cock bird at the big Chicago show in what was the strongest competition ever put up by the biggest breeders in the country. There were 26 cocks in the class. Mr. Blanchard also won the following prizes at the Beloit show last month in a class of nearly 100 Reds: Silver cup for highest scoring pen in American

Minorcas, has about 50 splendid cockerels, bred to improve egg production, that he is offering at reasonable prices. His stock is the prize-winning kind, as is shown by the following winnings: Chicago, December, 1908, 1st and 2d cock; 3d and 4th hen; 4th and 5th pullet; 1st pen. Huntington, Ind., January, 1909, 1st and 3d cock; 1st and 2d hen; 1st, 2d, 3d cockerel; 1st and 2d pullet, 1st pen. Indianapolis, 1909, 1st and 2d cock, 2d and 4th hen; 1st and 2d cockerel, 1st and 2d pullet, 1st pen.

List of prizes won by Harmon Bradshaw at Lebanon, Ind., December 14-17, 1909, five breeders competing: Cock—First, second. Hen—First. Cockerel—First, second. Pullet—First, second. Pen—First. Twenty-five dollar cup for best display in the show. First on best dozen white eggs. He showed 13 birds and every one got a prize but one. Had a cock bird score 96 and two hens 96½ and 96½. This winning was made in

River Home Poultry Yards, Perrysburg, O., report of New York winnings. Birds shipped a great distance in competition with home exhibitors in the Light Brahma territory. Their first experience in Madison Square Garden, showing against the strongest class ever shown. On twelve entries won 1st and 3d hen, 2d cockerel, 5th pullet, 3d pen. This, with their clean sweep at the late Chicago show, pronounces the River Home Poultry Yards the "Light Brahma Kings."

Edward Brown, Mendota, Ill., the well-known breeder of Barred Plymouth Rocks, reports the following winnings: At Dixon, Ill., Dec. 28-31, 1909, 1st cock; 2d, 3d, 4th hen; 1st cockerel; 2d, 3d pullet; 1st pen. Downer's Grove, Jan. 13-15, 1910, 1st, 2d cock; 1st, 4th hen, in a strong class of 53 Barred Rocks. If you want eggs that will improve your flock write him for prices and mention American Poultry Journal.

INCUBATORS

CLOSE-TO-NATURE BROODER

A Brooder built on the Most Exact Scientific Laws. Three life-saving Principles not found in any other brooder invention: Warmth by Conduction and Contact; Ventilation by Induction and Percolation; Prevention of Piling and Crowding by Mechanical Construction. Has met with a most remarkable reception the past three years, being used and endorsed by many scientific and successful poultrymen. Not a novelty, a hot air bake oven, a lampless cold storage box, nor a dollar "system", nor a quick-get-rich forty-foot lot plan, but it is an expensively constructed, common sense, close-to-nature chick nurse, blending the instincts of the mother hen with the reason of man and satisfying every natural impulse of the chick. Brooders are double, metal lamp box outside, hovers adjustable, double tops, triple hover floors, withstanding wind and weather. Brooders for orchard and field, and Independent Hovers ready for instant use in box or shed. Need little attention. Eminently the brooder for the business man and the farmer.

Incubators of same high merit and equal successful experience of the brooders. Catalog free.

CLOSE-TO-NATURE COMPANY, 38 Front Street, COLFAX, IOWA.

HOVER

VALUE OF WINNERS AT LARGE SHOWS.

It is a pleasure to win in any show, and the pleasure increases in proportion to the standing and importance of the show. This is because of the very obvious fact that it is much harder to win in the more prominent shows. For this reason a great many breeders do not exhibit at Chicago and New York. This is a great mistake, however, if a breeder has the stock that will stand the competition, because a ribbon won in either of these shows means much more and is worth very much more to a breeder than a great many prizes won in small shows.

This winter the well known River Home Poultry Yards, Perrysburg, Ohio, exhibited their famous Light Brahmas at Chicago and also at Madison Square, New York. They took all the prizes in sight at Chicago, and at New York they won in the hardest competition ever seen at Madison Square, 1st, 3d hen, 2d cockerel, 3d pen and 5th pullet.

River Home Poultry Yards have won hundreds of ribbons and prizes in recent years on their Light Brahmas, but their wonderful success this winter demonstrates that they can always win when they exhibit.

The eastern and New England Light

Brahma breeders frankly admit that River Home Poultry Yards have to be reckoned with in the Light Brahma World.

The Buff Poultry and Bee Farm, Austin, Minn., reports the following winnings at the last Austin show, December 28 to 31, 1909: Buff Cochins, 1st, 2nd, 3rd hen; 1st, 2nd, 3rd pullet; 1st cock; 1st pen. Buff Orpingtons, single comb, 1st cock; 1st, 2nd, 3rd hens; 1st pullet; 2nd cockerel; 1st pen. Rose Comb Buff Orpingtons, 1st hen, 1st pullet. Buff Rocks, 1st, 2nd cocks; 1st, 2nd, 3rd hens; 1st, 3rd cockerels; 3rd pullet; 1st pen. Buff Wyandottes, 1st cock, 1st, 2nd, 3rd hens; 1st, 2nd, 3rd pullets; 1st pen. Buff Leghorns, 2nd, 3rd hens; 2nd pen. Rouen Ducks, 1st, 2nd, 3rd cocks; 1st, 2nd, 3rd hens; 1st, 2nd, 3rd, cockerels; 1st, 2nd pullets. White Pekin Ducks, 2nd, 3rd cockerels; 2nd pullet. Gray Call Ducks, 1st, 2nd, 3rd cocks; 1st, 2nd, 3rd hens; Moscow Ducks, 1st cock; 1st hen; 1st cockerel; 1st, 2nd pullets. Cornish Indian Games, 1st cockerel; 1st, 2nd, 3rd pullets. Toulouse Geese, 1st, 3rd pullets. African Geese, 1st cock; 1st hen. Brown Chinese Geese, 1st hen; 1st cock. White Turkeys, 1st Tom. Silver cup in English class.

Many incubators have been brought to high degree of perfection. But, as in all automatic machines, security may go

wrong just at the most important time. The temperature may run a little high or a little low. Every poultryman knows what that means, time, eggs and profit are gone. All this danger may be prevented by providing your incubator with an attachment made by the Acme Incubator Co., Chicago, Ill., Box 705. This device can be set for any range of temperature from one to five degree at the slightest change above or below the limit set, a warning given to anyone within hearing. It is simple and moderate in price and can be attached to all makes of incubators. Persons having machines should write to the manufacturers for full particulars.

L. C. Taylor, Gibsonburg, O., breeder of Blue Andalusians, reports the following winnings at the late Ohio State Poultry Show, Columbus, O.: 1st cock; 1st and 2d hen; 1st cockerel; 2d and 3d pullet; 1st pen; six single entries and one pen entry; also several specials. If you want something choice in this grand old variety, write him for prices and particulars and mention American Poultry Journal.

In our January issue, in the report of the Chicago show, we credit Mr. Lowell with winning second on Single Comb Brown Leghorn cockerel. This was an error, as second cockerel was won by H. F. Becker, Waterloo, Ont., Canada.

YOUR HENS WILL PAY BIG PROFIT

Keep only your laying hens! Your non-layers, barren hens, drones, etc., eat up the layers' profits faster than the useful hens make those profits by steady egg laying. You must get rid of the hens which can't pay their own board bills, to say nothing of egg profits.

But, of course, you don't want to kill a hen that, though it is a non-layer now, still possesses egg-laying qualifications. How are you going to tell whether the hen will ever lay again?

That's just what the Potter System teaches in ten minutes. You'll quickly know how to tell the absolutely eggless hens in your flock. You take the non-layers away, keeping only the hens that pay profit. Then you sell the non-layers to market—more profit.

Thousands of poultry keepers and farmers are making their flocks pay big because they are using the Potter System. Their success is yours, too. Send us that coupon in the lower right hand corner and enclose two red stamps for postage.

"Don't Kill the Laying Hen"

Reveals the simple way of making money by eliminating non-laying hens from your flock. The method of telling whether a hen will ever lay another egg is laid bare.

Our Book Tells You

- 1st—How to avoid killing the hen that is laying.
- 2d—How to pick out the hen that is not laying.
- 3d—To know about how far advanced the hen is toward the laying point.
- 4th—How to avoid wintering hens that are not likely to be good winter layers.
- 5th—To know how to select the hen having strong laying powers for breeding purposes.
- 6th—How to know the hen that has entirely lost her power of egg production.
- 7th—To know how to sort out the hens in summer or fall that have ceased laying.
- 8th—How to know the hen that has become weakened in her laying powers.
- 9th—To know how to buy hens in the early winter that will make good winter layers, and dispose of them at a large profit after receiving their crop of eggs.
- 10th—How a very close estimate of the number of eggs the hen lays in a week or month may be made without the use of trap nests.
- 11th—How overfeeding before egg development has started tends to reduce the egg production.
- 12th—How, when and why the laying hen should be educated.
- 13th—How to arouse and stimulate the laying organs of the hen.
- 14th—How to know the pullets that will make, and are, strong layers.
- 15th—Roup, and how it affects the laying organs of the hen.

This Splendid House, Only \$40

This Potter Portable Sanitary Poultry House, shown here, is eight feet by ten feet in size, completely equipped with two Potter Henneries Outfits, six nests, etc., two pens, room for fifteen to eighteen hens each. It is complete, convenient, sanitary, neat and attractive. If in need of a house of this style and size, you can't beat it for \$40.00. The house shown here is but one of the dozen different styles and sizes which we make. We recently bought out the business of the Sanitary House Company of Lemont, Illinois, and now manufacture the complete line of Portable (K. D.) Poultry Houses, Broods, Coops, Pigeon Lofts, etc., formerly made by them. If you want a complete up-to-date and cheap house we can supply it. Large 100-page catalog fully describing our houses, fixtures and supplies will be sent.

: : : BRADLEY BROS., BOX 909, LEE, MASS.

S. C. W. LEGHORNS

EXCLUSIVELY

Huber's famous superior strain, not only demonstrated their superior exhibition qualities at Chicago, Dec. 7 to 12, 1909, where they won first cockerel, fifth cock, fourth and fifth hen and 3d pen, BUT excel all other strains in laying as well. The past year a flock of 150 hens averaged 170 eggs each, which stands unequalled.

Our breeding pens this season will be the best we ever owned. We still have a few good breeding cockerels and pullets to dispose of at reasonable prices.

If you are in need of stock, eggs or baby chicks, write us. Send four cents in stamps for our handsome illustrated catalogue, which contains our matings, etc., for 1910.

Huber Bros. : Box B : Kenosha, Wis.

What
E. H.
Harriman
has to say of

"The
Only
Way"

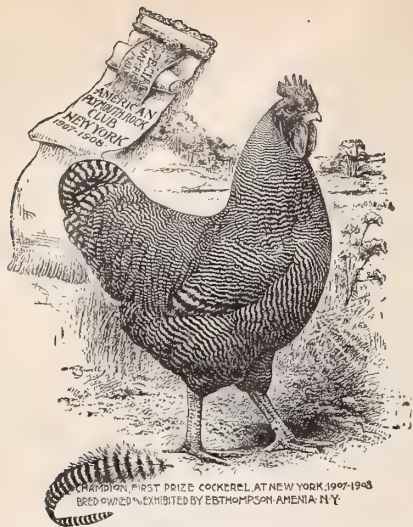

"The 'Alton' is today the best railroad physically in the state of Illinois; the service it renders is far ahead of most of the railroads in the state; it has been made 250 per cent better for two-thirds of its original cost; it is a perfect physical property, wisely managed and run in the way to give the people the best possible service. You may quote me in this respect."

First Prize "Ringlet" Cockerel and Winner of Special Prize for Champion Male at Madison Square Garden, New York, Winter of 1908, from Photograph.

Worth More Money than Any Barred Rock ever Produced, Living or Dead

birds fit to win in any competition. Richly illustrated 58-page catalogue upon request; it is full of original pictures of New York winners from life. EGGS from the world's finest exhibition matings, one setting \$6; two settings \$11; three settings \$15; four settings \$18. Address

E. B. THOMPSON

Lock Box 510, AMENIA, N. Y.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winters of 1908 and 1909

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection, and created a Sensation as the Finished Achievement in Modern Barred Rock Breeding.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My clean sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show birds fit to win in any competition. Richly illustrated 58-page catalogue upon request; it is full of original pictures of New York winners from life. EGGS from the world's finest exhibition matings, one setting \$6; two settings \$11; three settings \$15; four settings \$18. Address

36 First and Special Prizes at BOSTON and NEW YORK 1907.

Winners at New York, from Life.

HAWKINS' ROYAL BLUE STRAIN PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, COLUMBIAN, WHITE, SILVER, BUFF.

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others.

My matings this season are the best I ever owned.

At New York, in the strongest show of Barred Rocks ever seen, 451 Birds, I won 1st, 2d, 3d and 4th Cockerels; 1st, 2d and 3d Pullets; 1st and 3d Cocks; 1st and 2d Hens; 1st and 2d Breeding Pens. My other varieties are of the same high quality. Hundreds of choice exhibition and breeding birds at honest prices. EGGS from Prize Matings: one setting, \$5.00; two settings, \$8.00; three settings, \$10.00; five settings, \$15.00. \$20.00 per 100. Catalog of America's finest Plymouth Rocks and Wyandottes free.

First Cockerel at New York.

A.C. HAWKINS, Lock Box 25 Lancaster, Mass.

BUFF WYANDOTTES THE KIND THAT WIN

At Chicago, 1909, in one of the strongest classes of Buff Wyandottes ever shown in the West, my birds won 1st, 2d cock, 2d, 3d hen, 4th, 5th ekl., 2d pullet and 3d pen, besides several specials, and

Again Show Their Superiority

Am now booking orders for eggs from prize winning matings at \$3, \$5 and \$10 per 15. Also have a few extra choice breeding and exhibition birds to spare at reasonable prices, considering quality.

Write to the largest Buff Wyandotte farm in the world for catalogue; mention A. P. J.

NO. 3

AMERICAN POULTRY JOURNAL

A CLEAN SWEEP!

After winning the beautiful silver cup presented by the President of the National S. C. White Leghorn Club at Madison Square Garden, N. Y., Dec. 28, 1909, to Jan. 1, 1910, for best cock, hen, cockerel, pullet and pen, we sent our stock to the Boston Poultry Association Show at Boston, Mass., Jan. 11 to Jan. 15th, 1910, and made the greatest win in S. C. White Leghorns that has ever been made in Boston; entering two pens, one of old and the other of young birds, and 3 cocks, 3 hens, 3 pullets and 3 chicks, we made a clean sweep of 6 firsts and a place with every entry, and won every special offered, including a silver cup, several money prizes, and many badges and ribbons. The 1st prize chl. was awarded the A. P. A. silver medal for being the finest chl. of all the Mediterranean class. He also won 7 other specials. The 1st prize pullet alone won 7 specials. In Barred Rocks we won 3d and 6th cocks, 4th and 6th chicks, 5th hen, 5th pen and the special for the best shaped female in the Barred Rock class. Send for beautifully illustrated catalogue and mating list. Exhibition and utility males and females at all times. Eggs for hatching. Day old chicks.

The Cheviot Poultry Farms

🌿 1910 Mating List and Catalogue is Just Off the Press 🌿

and will be mailed on receipt of two stamps to any one interested. Our business has increased 37 fold over that of this time last year, and the remarkable thing is the fact that this increase is noted chiefly from towns where we sold eggs last year.

In **Bufs** we have since last year made all our sensational importations. We have retained the cream of our raising and have now associated with us in breeding Bufs, Mr. Baker, who joins us with the best Bufs in America that won Judge Stanfield's trophy cup for best Bufs he judged last year, including Madison Square, Chicago and the National Buff Orpington Club meet at Cleveland. This is the only time in Orpington history that a National championship has been officially and indisputably established. No rhetoric nor billboard advertising can overcome this fact that we are offering this year the CHAMPION strain of Bufs in America. This wholly aside from our notable purchases in America and England which put us in Bufs we think fully as strong as we are in Blacks. We shall here take no space to speak of our wonderful **Blacks**. They are so universally known to be the best in America, and our business is now beyond our power to handle, so we need say no more of them. While other breeders were neglecting the Blacks we were hard at work building them up. At no time have we been able to meet the demand. This shows that there NEVER has been a time when the fellow who had the goods could not sell ALL the GOOD Blacks he could produce.

In **Whites** we are rapidly realizing our dreams. We have been able to get really good birds only by importing, and we now have birds of great size and splendid type. We have blended in our strain the blood of three of the leading English strains of Whites, and feel that in Whites we are very little below the supreme standard we have set in our Blacks and Bufs.

Send today for our 1910 mating list, or better still, come to see us, then we will get your order beyond doubt. We are now shipping eggs daily. Address all communications to

MILTON W. BROWN
CHEVIOT POULTRY FARMS :: CINCINNATI, OHIO

ORPINGTONS

1908-1909 Madison Square Garden Winner. On Buffs we won first and third cockerels, second and third pullets, fourth hen, fifth cock, silver cup for best cockerel, silver cup for best collection. Showed nine birds winning silver cup with 7 points more than any other breeder. On Whites at Cleveland 1908, first cock, first cockerel, first hen, first pullet. S. C. Blacks all sold.

Edwin R. Cornish (Formerly Edwardsburg) 1426 E. Pontiac St., Ann Arbor, Mich.

JACKSON'S World's Foremost White Wyandottes

Have won the highest honors at Madison Square, New York, for many years, also World's Fair, Boston and Chicago. I have bred the winners for the most prominent shows of America past 12 years. Past year more than ever two of my patrons were the most prominent winners at the Alaska-Yukon exposition at Seattle, also Chicago, Kansas City, Louisville, Ky., and Indianapolis. I bred the cup winners for the best cockerel and pullet for the Ottawa, Ont., past two years, also blue ribbon winners at Montreal and other shows of Canada. Many owe their success to my strain and give me credit for it. I could fill this paper and more with testimonials I have received recently (am free to use.) Some of the most successful breeders are buying from me every year. **Remember**, any stock purchased from me can be returned at my expense if not satisfactory. Satisfied customers have been my best ad. If you want to be in the winning, get in touch with me. I have not only bred many first prize winners, they also won the cup for best show including all breeds in several shows. My egg trade has brought me many customers for stock. I will sell eggs from a limited number of the best pens, same I will hatch from, at \$5 per setting; 3 settings, \$10. Send for circular and see who breeds the winners. **J. H. Jackson, L. B. 88, Hudson, Mass.**

THE FAMOUS HEN "PEGGY"
Value \$10,000.00

First prize winner at Jamestown Exposition, Madison Square Garden, New York, and everywhere she has been shown. The reason we value the above hen at Ten Thousand Dollars is because we refused \$2,500 for her after we sold five of her chicks for \$7,500; and we will give \$10,000 for a "Crystal" White Orpington hen that will equal her in every way.—Kellerstrass Farm, Kansas City, Mo.

KELLERSTRASS WHITE ORPINGTONS

Are the biggest payers because they have proven to be the biggest winter layers

KELLERSTRASS STRAIN

CRYSTAL White Orpingtons are the grandest utility birds on record today, and as to their fancy quality they won first at Madison Square Garden, N. Y., 1905, 1906, 1907, 1908; also at Crystal Palace, London, England, Chicago, and Boston. If you need some birds to improve your stock or for the show room, write us, we have them, and the kind that win, as our past record shows. Stock and eggs for sale at all times. Remember, we are the originators of Crystal White Orpingtons, and breed only the one kind. We devote our whole time to this one breed. Send for catalog; mention A. P. J.

GREATEST BUILDING MATERIAL OFFER

\$650 Buys the material to build this house

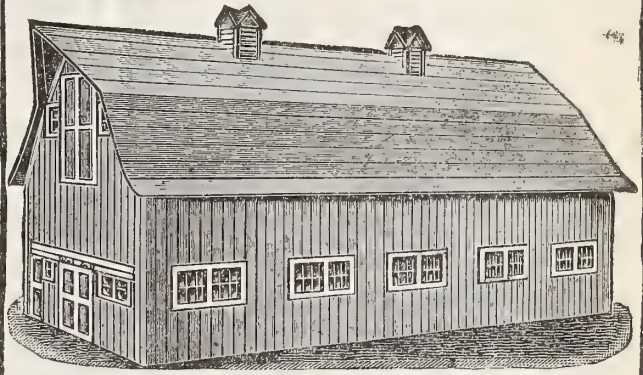

Our House Design No. 6

This is our leader, the best seller of any house ever designed anywhere, by anybody, at any price. Why? Because it comes nearer to filling the requirements of a home than any house of its size ever built. It is 33 ft. wide and 33 ft. 6 in. long, not including the porch. It has seven rooms, bath, pantry and a large front porch. It is of handsome appearance and symmetrical proportions. It is magnificently lighted and perfectly ventilated. Embodies every modern comfort and convenience. Our extremely low price makes it the best bargain proposition on the market. We cannot recommend this design too highly. Even if you don't need a home, build this house for an investment. You can sell it ten times over before it is finished.

EVER PUBLISHED!

Read Every Word of This Remarkable Offer

\$498 Buys the material to build this modern barn

Our Joist Frame Barn No. 221

The above is an illustration of our famous Joist Frame Barn. It is the most practical and serviceable barn ever designed. It may be built at a price very much cheaper, and has more available space than any other style. We can supply this barn in six different sizes, all of the uniform width of 36 ft. The above quotation covers a barn 36 ft. wide by 48 feet long and 18 feet high. The roof is of the self-supporting type, there being no posts in the hay loft. There are 6 windows on each side, 3 in each end and 2 in each gable, so the barn is thoroughly ventilated. Our price covers all the lumber, mill work, hardware and nails required to complete this building from the ground up. We can also furnish this design in larger sizes.

Of all wonderful offers advertised, this unquestionably is the greatest. The Chicago House Wrecking Company offers to sell you at a saving of from 25 to 50 per cent all the building material needed to construct the house or barn shown above. This means that we are absolutely leaving out all middlemen's profits and are dealing direct with the consumer. Our ideas are absolutely original and no other firm in the world has ever before advertised to completely supply the material such as is offered herewith. We are the largest concern in the world selling lumber and building material direct to the consumer. We propose to furnish you everything for the construction of these buildings as outlined in our offer. It will be in accordance with specifications which are so clear that there can be no possible misunderstanding. Our prices as given above mean for the material all correctly laid out in accordance with our plans and specifications.

We will furnish you an itemized material list. We will also supply blue prints, architect's specifications and full information needed to properly and economically erect these buildings. This is not an experiment with us. During the past year we have sold upwards of five hundred complete houses and barns. All the material is stored right in our main warehouse and yards at Chicago, ready to

ship promptly upon receipt of your order. We guarantee every stick furnished to be absolutely brand new. Don't pay any attention to what jealous lumber dealers or unscrupulous merchants may tell you to the contrary. We would not dare to advertise any false statement. If you buy a building and receive any material that is in any way, shape or manner to the contrary of our general and specific representation, we guarantee to take back such material at our expense and replace it with material strictly in accordance with our description, or to refund you the full purchase price of same, or make such adjustment as meets with your entire approval. As to our terms: They are as liberal as anyone could ask for. If you do not want to send money in advance, we will make shipment, to be paid for after it reaches destination, provided you furnish us with absolutely satisfactory bank references.

Our literature explains, fully, our operations. On application we will furnish you the names of hundreds of satisfied customers in all parts of the country. On request we will quote a price delivered, freight prepaid, at your railroad shipping point, thus there will be no question as to the ultimate cost of the material. You will know all the facts before you buy. We are not asking you to buy a "cat in the bag." You will see what you buy with open eyes.

Lumber and Building Material at 25 to 50 Per Cent Saving

We say to you positively that no matter what your wants in the line of building material, we can supply it, and always at a saving. This statement is backed by any number of unsolicited testimonials from those who have taken advantage of our liberal offers of the past. Especially do we urge you to act now. Never in years has lumber been offered at such low prices as we are offering it for at the present time, and it is good lumber, too, first-class, right up to grade, and as good or better than that carried by any local dealer anywhere. Every stick of lumber that we sell is new. Nothing "wrecked" about it. It is as good as can be bought. We haven't a piece of second-hand lumber in our stock, and if we did have it we would not sell it by mail. We are selling only new, clean stock, no shop-worn material, and all our grades are guaranteed.

Then our Mill Work. You cannot improve its quality. It's as good as anyone wants. It's better than 90 per cent of the dealers have for sale. We can furnish you every single thing you may need in the line of Doors, Sash,

Mouldings, Sideboards, Mantels, Interior Trim, or anything else, in other words, each and every article that comes into the construction of a building of any kind, and that includes also Structural Iron, Iron Beams, Iron Columns, or anything else in the iron line.

We have a complete stock of Roofing Material, both tin, steel, iron and ready roofing. We can furnish you shingles in all grades, everything in the way of plumbing and heating material. We can supply your plumbing, your heating apparatus as well as your paint. We can supply your wants in Builders' Hardware at a saving of 25 per cent or more. We mean your Nails, your Builders' Hardware and your Tools. And so it goes all the way down the line of material you need. We save you money everywhere, and the way to convince you of this fact is to have you submit to us a list of building material that you are in the market for. Let your carpenter or contractor, or whoever has charge of your building operations, send us a list of the material you need and we will give you a prompt estimate. We will, on application, name you prices, freight prepaid.

OUR FREE BOOK of PLANS

Our BOOK OF PLANS is unquestionably the finest publication of its kind. It shows, true to life, about fifty houses and barns, describes them in a general way, and shows the first and second floor design of all houses and interior suggestions for all barns; gives prices complete and at the same time shows the additional cost of plumbing, heating and painting. Even if you have no immediate intention of building, you should send for this book. Fill in the coupon to the left and we will send it to you at once.

Complete Blue Prints of any of the designs are furnished at \$2.00 each with privilege of returning same and receiving a credit of \$1.50, so the net cost would be but 50c. Or keep the blue print and when you purchase your building material from us for the complete construction, we will give you credit in full for the \$2.00 charged you for the plans.

FREE, Mammoth Catalog No. 186

Our Mammoth GENERAL CATALOG contains 10,000 bargains of merchandise for the home, the field, the factory and the office. Represents our complete stock bought at various sheriffs' receivers' and manufacturers' sales. Gives illustrations and explains our quotations. Tells about our wonderful stock. It is a price maker in every sense of the word. You will find that in every instance we undersell regular merchandise houses. Goods are described just as they are. There are some 450 pages of interesting quotations and reading matter. You will also find that we show our Rugs, Carpets and Floor Coverings in their natural colors, so that you can see just what they look like after you receive them. Write us for this book at once. It costs about \$1 to place a catalog in your hands, but we mail it free of all charge if you fill in the coupon.

CHICAGO HOUSE WRECKING COMPANY, CHICAGO

A Pretty Good Thoroughbred Yearling

M. M. Johnson, Incubator Man

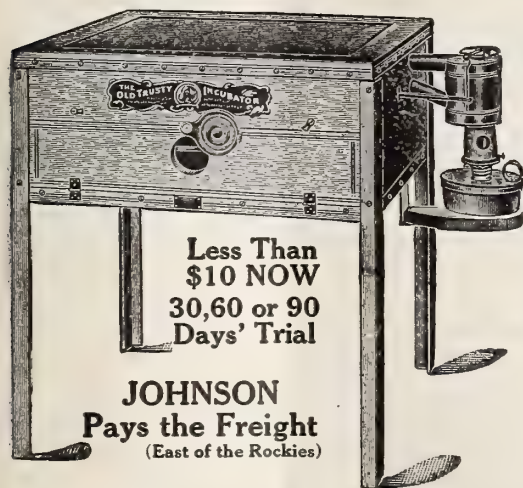

THE METAL covered Old Trusty Incubator is a year old. Its pedigree and record is all right. It averaged above 80% hatches among 52,000 customers the first season. See the hundreds of handsome photographs in the 1910 Old Trusty Catalog. More pictures in one year than all competition has in their lifetime.

During 1909 three great agricultural papers offered premiums to their subscribers for the best hatching done with incubators for the season. The papers were the Farmers Mail and Breeze of Topeka, Kansas, the Missouri Valley Farmer of Topeka, Kansas, and Successful Farming of Des Moines, Iowa. The three great papers represent over a half million subscribers. Over 2,000 contestants in the hatching contest. The metal covered Old Trusty won every premium offered in all three papers.

Without fear of contradiction, more metal covered Old Trusty Incubators were sold during 1909 than all other kinds combined and I have the largest and best equipped exclusive incubator and brooder factory in the United States, employ more mechanics, the largest bonafide working capital, the highest grade goods at the lowest living prices.

I made a 10% profit on 52,000 machines during 1909. For the year of 1910, I am making a 70,000 output at 8% profit. I am even doing better than 8% profit, it comes nearer 5% profit. No other concern on earth would dare to undertake it.

There is nothing cheap about the Old Trusty Incubator except the price. If I wanted to reverse it I could make incubators that would not cost me one half and they would still look very good in a picture, but, they would not be the Old Trusty Incubator that has been making money for my 150,000 customers in the last seven years. They would be more like the imitations of the Old Trusty that flood the market each season.

CULVER POULTRY FARM

Breeders of fine poultry from the world's leading strains : : :

921 BURNHAM, BENSON, NEB.

A Medical Poultry Book Free to You

Every person interested in poultry, as a breeder or in a commercial way, will find "Zenoleum Chicken Chat" a useful and reliable adviser. It gives full directions for the treatment of all diseases that affect poultry, and the prevention of contagious and infectious diseases in the poultry yard. It tells the most effective treatments to rid the flock of parasites, such as lice, mites and various germs, that cause roup, pip, tapeworm, canker, typhoid, blackhead, etc., that if allowed to spread in the flock will surely cut off all chances of profit, and disgust the owner with the business.

"Chicken Chat" is the production of the most competent authorities on diseases of fowl, and is printed and sent out free by the manufacturers of Zenoleum Disinfectant, Germicide and Lice Killer, which has the endorsements of FORTY-FIVE out of forty-eight State Agricultural Colleges and Experiment Stations.

"Chicken Chat" teaches the doctrines of cleanliness, disinfection and the prevention of disease as the surest and safest method of making the industry profitable.

To the commercial poultry raiser, who must depend upon the incubator to hatch out his chicks, the report of the Ontario government poultry expert, obtained in a series of tests at the Ontario Agricultural College at Guelph, will be found of especial value. This test shows that the free use of Zenoleum in the incubator not only causes a large percentage of live chicks when hatched from the eggs in the incubator, but a greater percentage were alive at the end of four weeks than without the use of Zenoleum, or by hens under ordinary conditions. In other words, the chicks hatched out in the incubator treated with Zenoleum had greater vitality, and consequently were better able to stand the various ills that cause the death of one-half the hatch of incubators operated in the industry, and the Canadian government issued a bulletin on the subject, which will make the business more profitable and certain than ever before.

"Chicken Chat" is free to every reader of this paper. A cent spent for a postal card will return you a profit of many dollars. Address Zenner Disinfectant Company, 117 Lafayette Avenue, Detroit, Mich., before you forget it.

You Owe It to Yourself

Member American Poultry Association—Vice-President American Black Minorca Club for Indiana

A Treatise on Food and Egg Production

A valuable book for anyone who is raising fowls for egg production. It gives in a very plain and concise form the composition of the different foods.

It tells how and what to feed to produce eggs in winter.

The author has sent this book on approval and has always received the money for same at once, which is proof that the book is valuable.

By special arrangement with the publisher we are offering this book and one year's subscription to American Poultry Journal for only \$1.00. Send all orders to

American Poultry Journal Pub. Co., 358 Dearborn St., Chicago

Twelve Months' Work in the Poultry Yard

By W. Theo. Wittman, Acknowledged by All to be One of America's Foremost Authorities and Judges

Starts you in January, and take you clear through the year—telling you just what to do to successfully handle your fowls in the safest and most economical way that is consistent with good business methods, to make the largest success possible with your fowls.

It doesn't tell you how to make two hundred dollars from twenty hens

but it gives you a short, boiled down, and up-to-date treatise on lines that are practical and can be executed with safety. The contents of this book are intensely practicable, and teach a method of poultry keeping exactly opposite to that which is complicated and unnecessary. Price 25 cents.

THE POULTRY ITEM

The largest Eastern poultry Journal, published at Sellersville, Pa., 68 to 140 pages monthly. Special breed numbers starts in September and continue until May, 1910. Tells you how to secure larger and more profitable returns from your chickens. Extremely helpful and valuable. Get a-going right in the poultry business. Many are making \$2.00 per hen each year. Are you? The Poultry Item will keep you posted on latest methods and poultry secrets. The Item stops when time is up. Price 50 cents the year. Order it now at the following special terms.

The Real Secret of Big Hatches

BY P. M. WICKSTRUM.

Not less than 6 different books about "Poultry Secrets" have come out lately. I have them here on my desk at this moment. I've read them all, from cover to cover, and I'll swear there isn't a new and valuable idea in one of them on getting big hatches. My Poultry Guide and Catalog that I postpay free to any good poultry woman or man, actually contains more genuinely helpful advice on *Hatching and Raising Chickens for Profit* than any of these books of so-called "Secrets" that sell for 50c and upwards.

The great trouble with poultry raisers—especially beginners—is, they think any old incubator will do. Whereas, you can count on the four fingers of one hand all the incubators that are helping make the Poultry Business pay big profits. I know what I am talking about, because I have tested all kinds in my experimental work.

A fellow once said to me, "Oh, an incubator is just an incubator—four legs, a box, a lamp and some egg trays. That's all there is to it. All just alike." I need not tell you this same individual has made a failure of everything he has undertaken. He wouldn't even give his good wife a chance to lift the mortgage by spending an extra dollar or two for a first class incubator. No, sir-ee! He bought a "cheap" one.

The Incubator With a Record

To anyone who wanted an incubator just to look at, I would say "buy the cheapest rattle-trap you can find." It's apt to be painted up very temptingly and prettily. It's all right to set flower pots or milk pans on.

But—if you are going to raise chickens for profit—if you want big hatches—if you want healthy chicks that grow into sturdy, plump fowls, then I say "buy the incubator with a record behind it."

Here on this page are pictures of men and women who use Queen Incubators, and of a number of prize-winning pullets. I promised to print them this month. These "Queen" records and victories are in no sense surprises to me or to those of you owning "Queens." My new 1910 Poultry Guide includes between 140 and 150 similar letters and pictures, besides numerous other pictures and discussions of absorbing interest to poultry raisers. The pictures here shown are only a "drop in the bucket." It keeps me busy evenings reading the good letters I get daily from "Queen" owners. No wonder I am enthusiastic and willing to go the utmost limit in proving the virtues of my incubator!

See the Heart and Lungs

I have sawed off the legs of my incubator and ripped the body in two, exposing the heating, ventilating and regulating system, so that you can see (in the picture below) the vital parts—the very heart and lungs of the machine.

Now, four thermometers—one at each corner of the heating plant—(note the copper pipes) register within $\frac{1}{4}$ of a degree Fahrenheit the same temperature. That means every egg receives proper and equal heat nourishment. The lamp is not only a fuel saver, but is absolutely safe at all times.

The heating apparatus is of pure Lake Superior cold-rolled copper, and copper won't rust. My Queen Incubator lasts much longer than iron or tin-made incubators. Copper costs four times as much as iron. Through and through, the "Queen" is safe, substantial, sound and durable.

The "Queen" Incubator is self-regulating at all times. Put it in your barn, wood-shed, kitchen, dining-room or parlor—I care not where—and it will hatch more chicks and healthier chicks than any other machine on earth. Other people have found it so and your experience will be the same after you have tried my "Queen" free for 3 months.

Let every man or woman reader of this paper decide to try a "Queen" Incubator. The trial shan't cost you a cent. For I won't

BEGINNERS AND EXPERTS USE AND RECOMMEND IT

In Big, Successful Hatches and Prize Winners, Queen Incubator Now Leads Them All

Probably the most interesting events in the poultry world during the past year have been incubator tests. Among the many performances, the "Queen's" record has been most remarkable.

Beginners and amateurs have found the "Queen" a little Gold Mine of Profit to them.

Experts who raise fancy poultry are using the "Queen," too, because it hatches the strongest, "classiest" chickens. These victories for the "Queen" stamp it as the leading incubator and certain to give satisfaction to everybody.

Hatched 95 Per Cent.

Mrs. Johnson

Mrs. Grace Johnson, Scottsbluff, Neb., says: "The following report will give an idea of what we have done with our Queen Incubator and Brooder: first hatch, 98 out of 102 eggs; second, 107 out of 111; third, 80 out of 94; fourth, 94 out of 101—of the 389 hatched only 5 were lost in the brooder. This is a trifle better than 95 per cent. This is the first 'Queen' we ever saw." (Mrs. Johnson has recently bought two more Queen Incubators.)

Mrs. Harrell's Report.

Mrs. Harrell

'Way down in Micanopy, Florida, a good woman, Mrs. H. H. Harrell, who knew nothing about an incubator, tried a Queen last spring. On Oct. 11, 1909, she writes: "I purchased a Queen, 110-egg size incubator last spring. My first hatch came off. I raised 90 chicks." On Dec. 6 she sent in her picture and said: "I am anticipating great success with my 'Queen' next spring." This shows how even a beginner succeeds with a good incubator.

News from Texas.

Mr. Nees

Mr. Otto Nees, R. F. D. No. 5, Gainesville, Texas, writes: "There are ten kinds of incubators within 4 miles of us, but I had much better success with mine than any. I had no experience in running an incubator. The Queen Incubators are so easy to regulate, keep such an even temperature, and turn out such healthy chicks, which grow right along. I think the Queen Incubators and Brooders are the best on the market."

No Night Work.

Mr. Olson

It gets pretty cold up in Minnesota. It will be interesting to know the experience of Mr. J. L. Olson, of Hoffman, Minn., proprietor of the River Hill Poultry Yards. He says, (last October): "I think it's time to write you about your incubator and brooder. I received the outfit January 12th in good condition. As I am a breeder of fine Rose Comb Brown Leghorns, I am very careful to buy good hatching outfits. You know Leghorns hardly ever lay." I began to look over the incubator. I find everything in good looking order, and best of all is the adjustable wafer. It's worth the money alone. I started my 160-egg size March 5th, and we had a very cold spell, but the incubator ran steadily—no night work—in the morning I find it the same as I left it, 103 to 104. I hatched 91 per cent and I call it good so early in the season. I raised them to nice big fellows. The second hatch was still better, about 98 per cent.

let it. Try it on my plan—or on yours, if you know a fairer one. My present plan is:

1. 90 days' free trial—more time if you ask for it.
2. 5 years' guaranty, worded to suit yourself, if my regular guaranty doesn't suit YOU.
3. Direct factory prices—every penny you pay you get back in incubator value—no "rake off" for jobbers and dealers.
4. Freight prepaid—all Queens are shipped by fast prepaid freight—no trouble, no bother to you. You know the total cost of your incubator before you buy it, and can

Minerva L. Weatherman

Good Woman Pleased.

Minerva L. Weatherman, New Port, Indiana, Dec. 1, writes: "Am so enthused over the Queen! With my 110-egg incubator I hatched nearly 400 chicks out of four hatches and raised 75 per cent of them. My neighbors hatched as many chicks in a 240-egg capacity incubator, but they could not raise one-half of the chicks."

First Prize at Seattle Fair

This beautiful Barred Plymouth Rock Pullet "Seattle Queen," owned by Mrs. Perry Strandberg, Davey, Neb., won the Grand Prize at the World's Fair Poultry Show, held at Seattle, Sept. 27th-Oct. 6th, 1909. Mrs. Strandberg entered one pullet, one hen and one cock. The cock as well as the pullet won the first prize in his class: the hen won fourth prize. All three of these prize winners at Seattle were hatched in a Queen Incubator and raised in a Queen Brooder.

Mr. and Mrs. Strandberg raised 1000 Barred Plymouth Rocks last year. They have hatched several other prize winners in the Queen Incubator and raised them in the Queen Brooder. The winnings of these birds show that incubator-hatched and brooder-raised chicks are strong and vigorous. It is proof that the "Queen" hatches strong, healthy chicks, that live and grow and make money for their owners. Poultry fanciers and experts prefer the "Queen."

First Among 5000

Now look at "St. Louis Belle!" She went down to St. Louis sight-seeing last December and she came back with "rings on her fingers and bells on her toes." More than 5000 blooded chickens were entered in the great Poultry Show, but this handsome pullet who never knew any "mother" but a Queen Incubator, received first prize and the highest honors.

Refused \$100 Cash for Her

This is "Victoria" at the right. She certainly is well-named, too, for at the Nebraska State Show, about a year ago, this majestic fowl was declared Queen of them all. Perhaps she knew that her "mother" was a "Queen." Her owner shook his head in disgust when offered ten crisp ten-dollar bills for "Victoria."

Page 69 of the free Queen Poultry Guide gives a large picture of "Seattle Queen" and tells how the judges and spectators opened their eyes when "Seattle Queen" was placed on exhibition.

figure on making "FAT" poultry profits.

Intensive Chicken Farming—raising poultry for big, sure profits—is the greatest-paying business I know of. If I were not making the very best incubator of all, thereby benefiting poultry raisers everywhere, I would go into Intensive Chicken Farming on a monstrous scale at once. I may do it anyway, later on. I already own a fine chicken farm near here.

But the Queen Incubator has succeeded beyond my fondest hopes. Its fame has spread like wildfire from farm to farm, from neighborhood to neighborhood, from state to state, until now I am no longer concerned about how many I shall sell, but how to fill all the orders that pour in.

The coupon has been placed here below especially for your use. Do not be backward about sending it in. My Poultry Guide and Catalog cost me a little over 9 cents, but you are mighty welcome to one copy—free. And I won't try to crowd you into buying anything. That part will be entirely up to you. Fill out and mail this coupon now or send postal or letter if more convenient. I want to give you the real Secret of Biggest Hatches—and Biggest Poultry Profits! Please address me,

WICKSTRUM, The Queen Incubator Man, Box 4, Lincoln, Neb.
